Lumia Shopify Theme

*Thank You for purchasing **Lumia** theme. If You have any questions that go beyond the scope of this documentation, please feel free to submit a ticket to <https://big-skins.com/help>. Thank You very much!*

Is it necessary to read the documentation?

Definitely not! If you have even a basic understanding of the Shopify platform, you can easily understand the theme interface without documentation!

Then why do we need such detailed documentation if everything is so simple?

There are two reasons:

1. The advantage of our theme and its competitiveness is that we have created a lot of new features that are not available by default, so you can quickly set up everything according to the instructions without having to spend any time thinking about how to do it if you are not an advanced user. We don't want you to spend time assembling the store, we want to do it for you and so you can focus on your business tasks in the first place.
2. Familiarization. The documentation is not only a guide for beginners, but also a catalog of the theme's features. We boldly open the hood of the car so that you can see the full range and potential of the theme. But for those who purchased the theme, many interesting things will open up that are hidden from the public documentation-catalog.

Is it shopify 2.0 theme?

1. Upgraded theme architecture:
 - Sections on every page
 - Theme app extensions with app blocks
2. Flexible store content (improvements to metafields).
3. Enhancements to the theme editor.

4. Collection filters

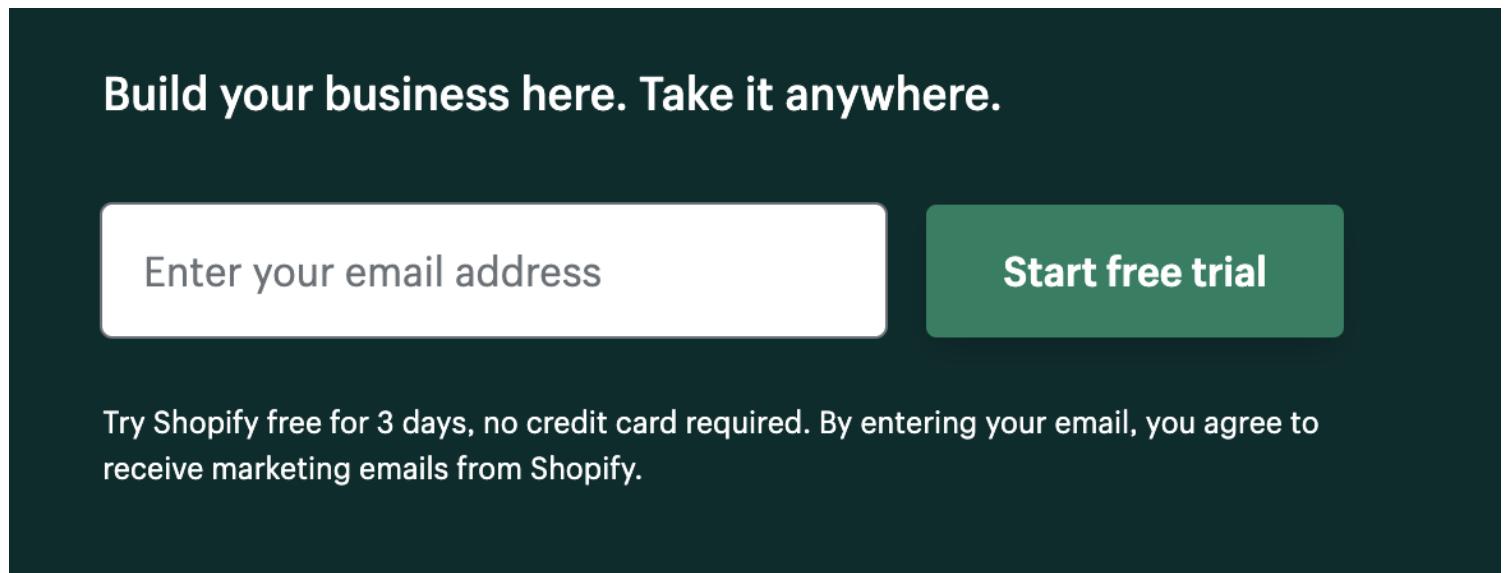

5. And even something new that you will not find in other themes:

- Subscriptions Ready new
- Real Shipping Calculator new
- Subcollections Ready new
- Theme styles presets new
- 3D & Variants Ready new
- Additional Product Options new
- Banner-Product new
- Looped Countdown new
- Related Products on the product page with infinite loading new
- Advanced Wishlist new
- Visual catalog of sections for easy store design (documentation feature) new
- And more...

Without further ado, we recommend You to buy a theme and get started!

Get Started

Shopify is web based ecommerce software. This means there's no installation required and it works with all operating systems (including Windows and MacOS)! Shopify hosts the site itself so You don't have to worry about installing, upgrading or maintaining any software or web servers. Visit <https://www.shopify.com/> to install Shopify.

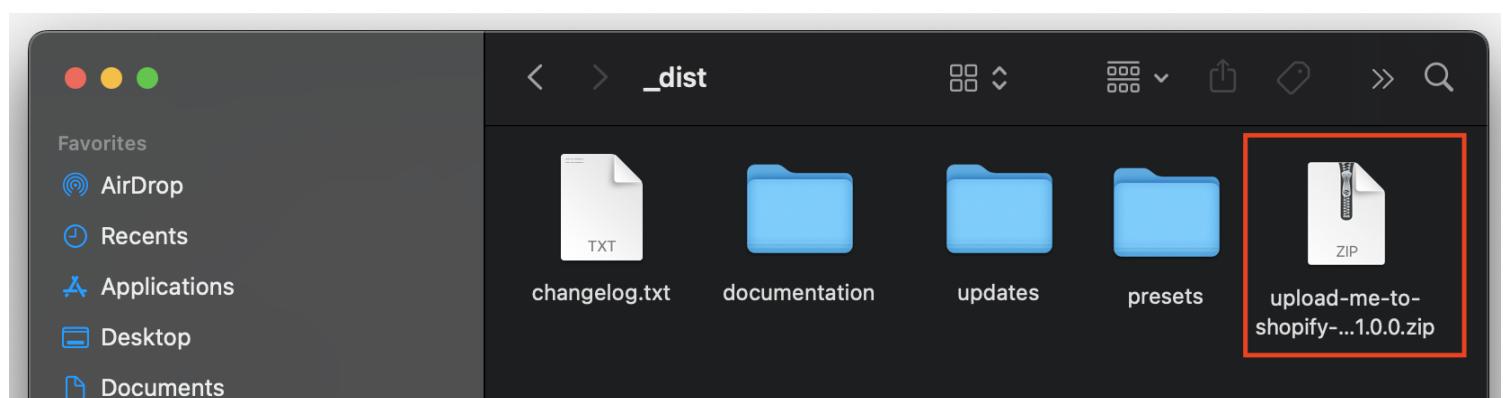

Try Shopify free for 3 days, no credit card required. By entering your email, you agree to receive marketing emails from Shopify.

1. Theme Install

1. Ensure that You've created Shopify store.
2. Ensure that You've purchased Lumia shopify theme [here ↗](#).
3. **Download** the latest theme package from <https://themeforest.net/downloads>

A screenshot of a Shopify theme download page. At the top, there's a search bar with "Search your downloads" and a green "Search" button. Below the search bar are filter options: "All marketplaces" and sorting by "Date Purchased". To the right of these are buttons for "Title", "My Rating", and "Recent Updates". The main content shows a theme item with a thumbnail image, a title, and a "Regular License" badge. A message says "Your support has expired. [Renew support now!](#)". There's also a checked checkbox for "Get notified by email if this item is updated". A prominent green "Download" button is highlighted with a red box. Below it is a "Rate this item" section with a 5-star rating.

4. **Unzip** package. The original package includes documentation (offline) / presets (skins, layouts etc for automatic installation) / updates (manual and automatic instructions for updating the theme if there are updates) / and the theme itself **upload-me-to-shopify-platform-lumia-N.zip**, which needs to be uploaded to Shopify.

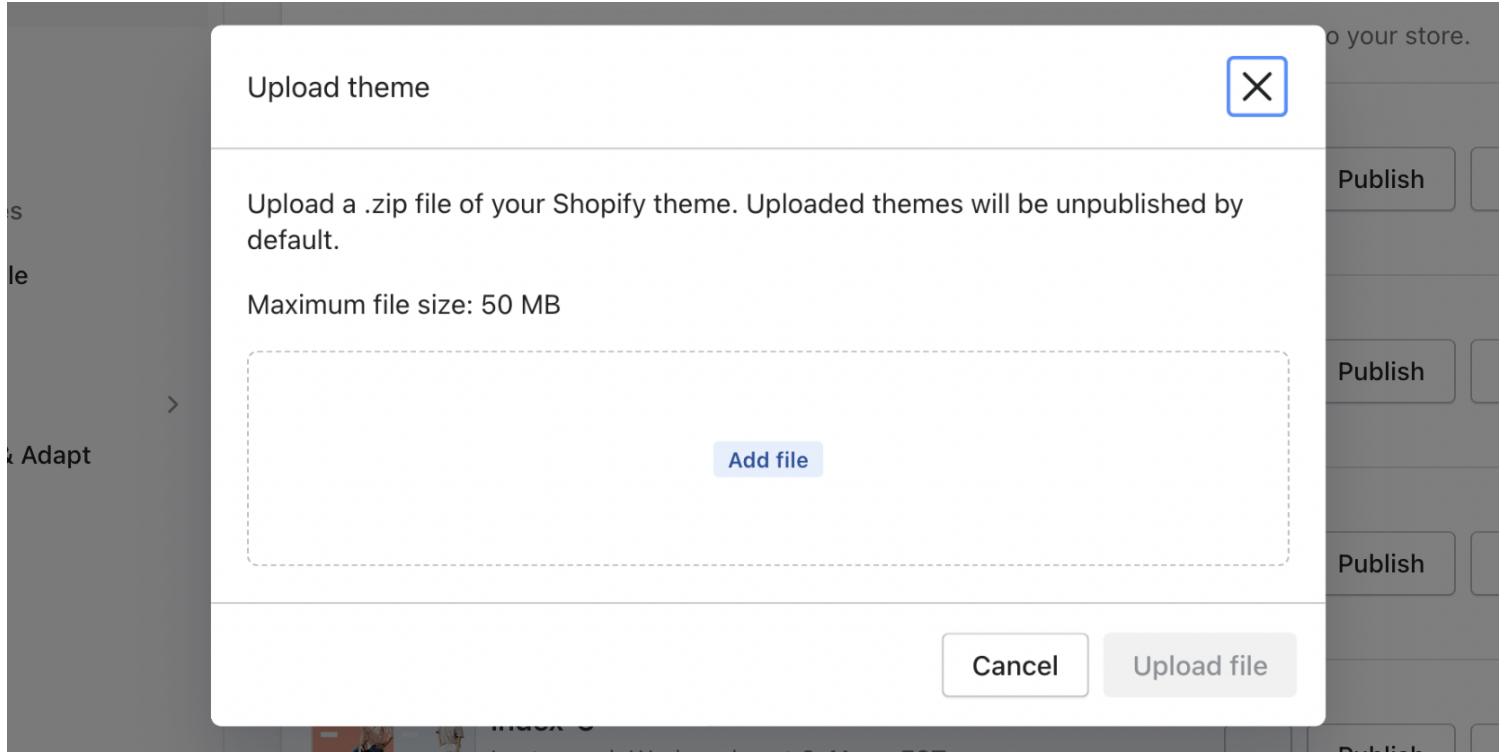

5. Login to Your shopify store. Go to **Online Stores > Themes**

The screenshot shows the Shopify Admin dashboard. On the left, there's a sidebar with various icons and links: Home, Orders (with a '10' badge), Products, Customers, Analytics, Marketing, Discounts, Sales channels, Online Store (which is selected and highlighted with a red box), and Blog posts. Below the sidebar, there's a preview of the 'Lumia' theme on a mobile device. At the top right, there's a 'Themes' section with a '7 days' filter and a preview of the theme.

6. Add theme > Upload zip file

The screenshot shows the 'Theme library' page. It lists a single theme: 'Copy of lumia-shopify/master'. The theme was added at 1:56 am EST and is version 1.0.1. To the right of the theme list, there's a button labeled 'Add theme' with a red box around it. Below the theme list, there are three options: 'Visit Theme Store', 'Upload zip file' (which has a red box around it), and 'Connect from GitHub'.

7. Browse theme file `upload-me-to-shopify-platform-lumia-N.zip` (where **N** is a theme version) and **Upload file**.

Congratulations! You have successfully installed the theme. You can view it on the frontend of your site.

2. Set Currency

The following information is taken from the [official documentation ↗](#).

You can enable multiple currencies by adding the countries and regions for each currency that you want to accept in your store.

1. From your Shopify admin, go to **Settings > Payments**.
2. In the Shopify Payments section, click **Manage**.
3. In the Countries/regions section, click **Add country/region**.
4. Select the country or region that you want to support from the list of [supported countries and regions ↗](#).
5. In the Multiple currencies section, enable the currencies that you want to support from the list of accepted currencies.
6. Click **Add country/region**.

3. Set Customer Account

You can make customer accounts required, optional, or disable them altogether. Bear in mind that requiring customers to create accounts could reduce sales conversion.

To edit Your customer account settings:

1. From Your Shopify admin, click **Settings**, then click **Checkout**.
2. In the Customer accounts section, choose a customer account option:

- **Accounts are disabled.**

Customers won't have the option to create an account or log in; they'll have to manually enter their details at checkout, as the fields won't be pre-filled.

- **Accounts are optional - Choose this.**

Customers can choose to create an account, but it's not mandatory for checkout. If customers have an account and are logged in, their address fields will be pre-filled when they place an order.

- **Accounts are required.**

Customers must have an account and be logged in to place an order. This setting is useful if You're running a wholesale or members-only store, for example. Address fields are pre-filled when the customers place their order.

3. Click **Save** changes to confirm Your change to customer account settings.

Updates

There are three options for updating the theme:

1. Fresh install
2. Manual update if you customized theme files
3. Manual update if did not customize theme files and only customized theme in the admin editor

Each of them has its own advantages depending on individual needs.

 With any theme update option the entire current database of your store is saved (products, orders, navigations, collections etc)

1. Fresh install

Advantages: The fastest and easiest.

Disadvantages: You need to reconfigure only the theme settings again.

1. Download the latest theme package from <https://themeforest.net/downloads>

The screenshot shows the 'Downloads' section of the ThemeForest website. At the top, there's a navigation bar with links like Dashboard, Profile, Portfolio, Followers (94), Following (0), Settings, Hidden Items, **Downloads** (highlighted with a red box), Reviews, Refunds, Payouts, and Earnings. Below the navigation is a search bar with the placeholder 'Search your downloads' and a green 'Search' button. Further down are filters for 'All marketplaces' and sorting options for 'Date Purchased', 'Title', 'My Rating', and 'Recent Updates'. A theme package is listed, featuring a thumbnail image, the title 'Regular License', and a large green 'Download' button (also highlighted with a red box). Below the download button is a rating section with five stars and a link to 'Rate this item'. At the bottom of the listing, there's a note about support expiring and a checkbox for getting email notifications on updates.

2. Upload the latest theme package theme as described in **Get Started / Theme Install**.

2. Manual update if you customized theme files

Advantages: Any client customization of the theme is saved, all scripts from applications that were embedded in the theme programmatically or manually are saved, all theme settings and the appearance of the theme will be saved.

Disadvantages: It may take some time and you must edit the theme code according to the instructions by yourself.

1 Create theme copy

With any theme update option, the entire current database of your store is saved (products, orders, navigations, collections etc)

 We recommend making changes to the copy, because sequentially changing the code of the published theme files will break the appearance of the theme and possibly compiling of the Js. Furthermore, during the manual update, customers will be unable to use the store completely.

1. Login to Your shopify store. Go to **Online Stores > Themes**
2. Click on the three dots next to the theme you want and then click **Duplicate**.

Lumia-Shopify-Published Current theme
Last saved: Friday at 10:17 am EST
Lumia version 1.0.1

View
Rename
Duplicate
Download theme file
Add theme ▾

2 Open theme files editor

1. Click on the three dots next to the theme copy and then click **Edit code**.

Theme library Add theme ▾

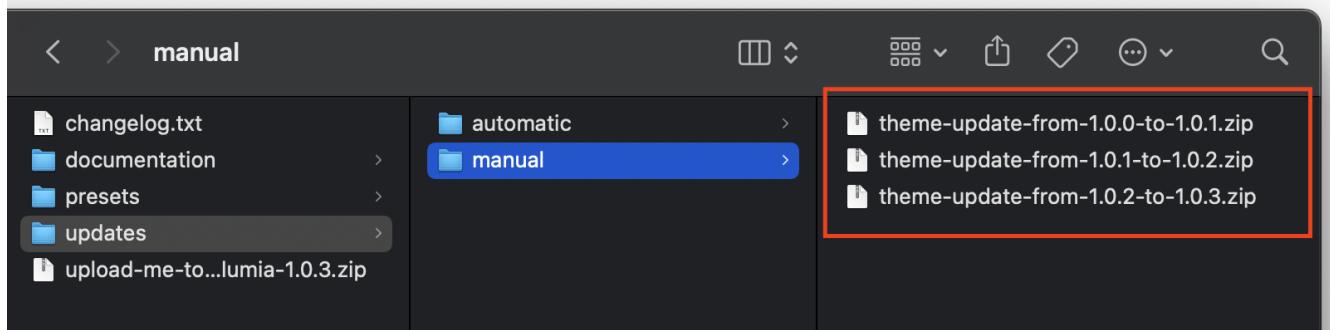

These themes are only visible to you. You can switch to another theme by publishing it to your store.

| | | |
|--|--|--|
| | Copy of lumia-shopify/master Last saved: Yesterday at 6:43 am EST Lumia version 1.0.1 | ... Publish Customize |
| | lumia-shopify/master Last saved: Friday at 7:54 am EST Lumia version 1.0.1 | Preview Publish Customize |
| | index-11 Last saved: Wednesday at 3:43 pm EST Lumia version 1.0.1 | Rename Duplicate Download theme file Edit code Publish Customize |

2. Don't close open editor. Next step describes how to fill changes.

3 Make changes according to instructions

Go to the theme package folder. Open **updates/manual** folder.

"Let's say the latest version is 1.0.3 and your current one is 1.0.0, and you want to update to the latest version, 1.0.3."

This means that you must consistently follow instructions one update after another in a strict order:

1. theme-update-from-1.0.0-to-1.0.1.zip
2. theme-update-from-1.0.1-to-1.0.2.zip
3. theme-update-from-1.0.2-to-1.0.3.zip

Consider an example of how to make instructions in the first step, theme-update-from-1.0.0-to-1.0.1.zip :

Double click on file theme-update-from-1.0.0-to-1.0.1.zip > **Double click** on nested file theme-update-from-1.0.0-to-1.0.1.html

Lumia Shopify Theme

Manually updating a theme from version 1.0.0 to version 1.0.1

1. Replace original css/js libraries files with new from the package

1. Replace file content in the store theme file **assets/bundle-head.css** with the same from the theme package
2. Replace file content in the store theme file **assets/bundle-head-rtl.css** with the same from the theme package
3. Replace file content in the store theme file **assets/bundle-bottom.css** with the same from the theme package
4. Replace file content in the store theme file **assets/bundle-bottom-rtl.css** with the same from the theme package
5. Replace file content in the store theme file **assets/bundle-head.js** with the same from the theme package
6. Replace file content in the store theme file **assets/bundle-head.js.map** with the same from the theme package
7. Replace file content in the store theme file **assets/jquery.min.js** with the same from the theme package
8. Replace file content in the store theme file **assets/popper.min.js** with the same from the theme package
9. Replace file content in the store theme file **assets/tippy-bundle.umd.min.js** with the same from the theme package
10. Replace file content in the store theme file **assets/swiper-bundle.min.js** with the same from the theme package
11. Replace file content in the store theme file **assets/selling-selector.js** with the same from the theme package
12. Replace file content in the store theme file **assets/wishlist-shopify.js** with the same from the theme package
13. Replace file content in the store theme file **assets/shipping-calculator.js** with the same from the theme package
14. Replace file content in the store theme file **assets/index-recently-viewed.js** with the same from the theme package

2. Make manual changes to theme files.

Left side - as it was in previous version / Right side - as it should be in the current version

 40   </script>
```

1. Replace libraries

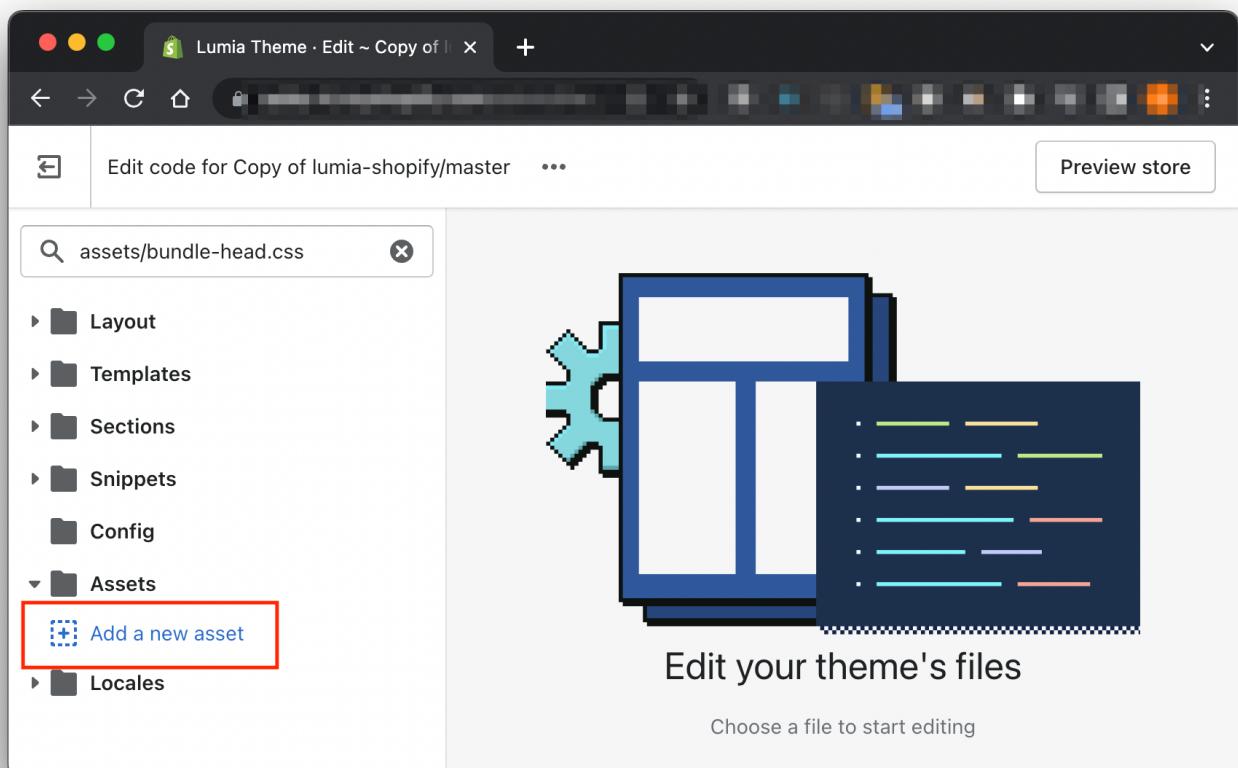

The first step in the instruction is to replace the static libraries that are not edited by hand, but simply overwritten for convenience. Libraries are complex minified files that, in any case, cannot be edited manually and the difference in changes between versions of libraries cannot be tracked.

This means that, for example, you must replace the first library in the **assets/bundle-head.css** file with a fresh version.

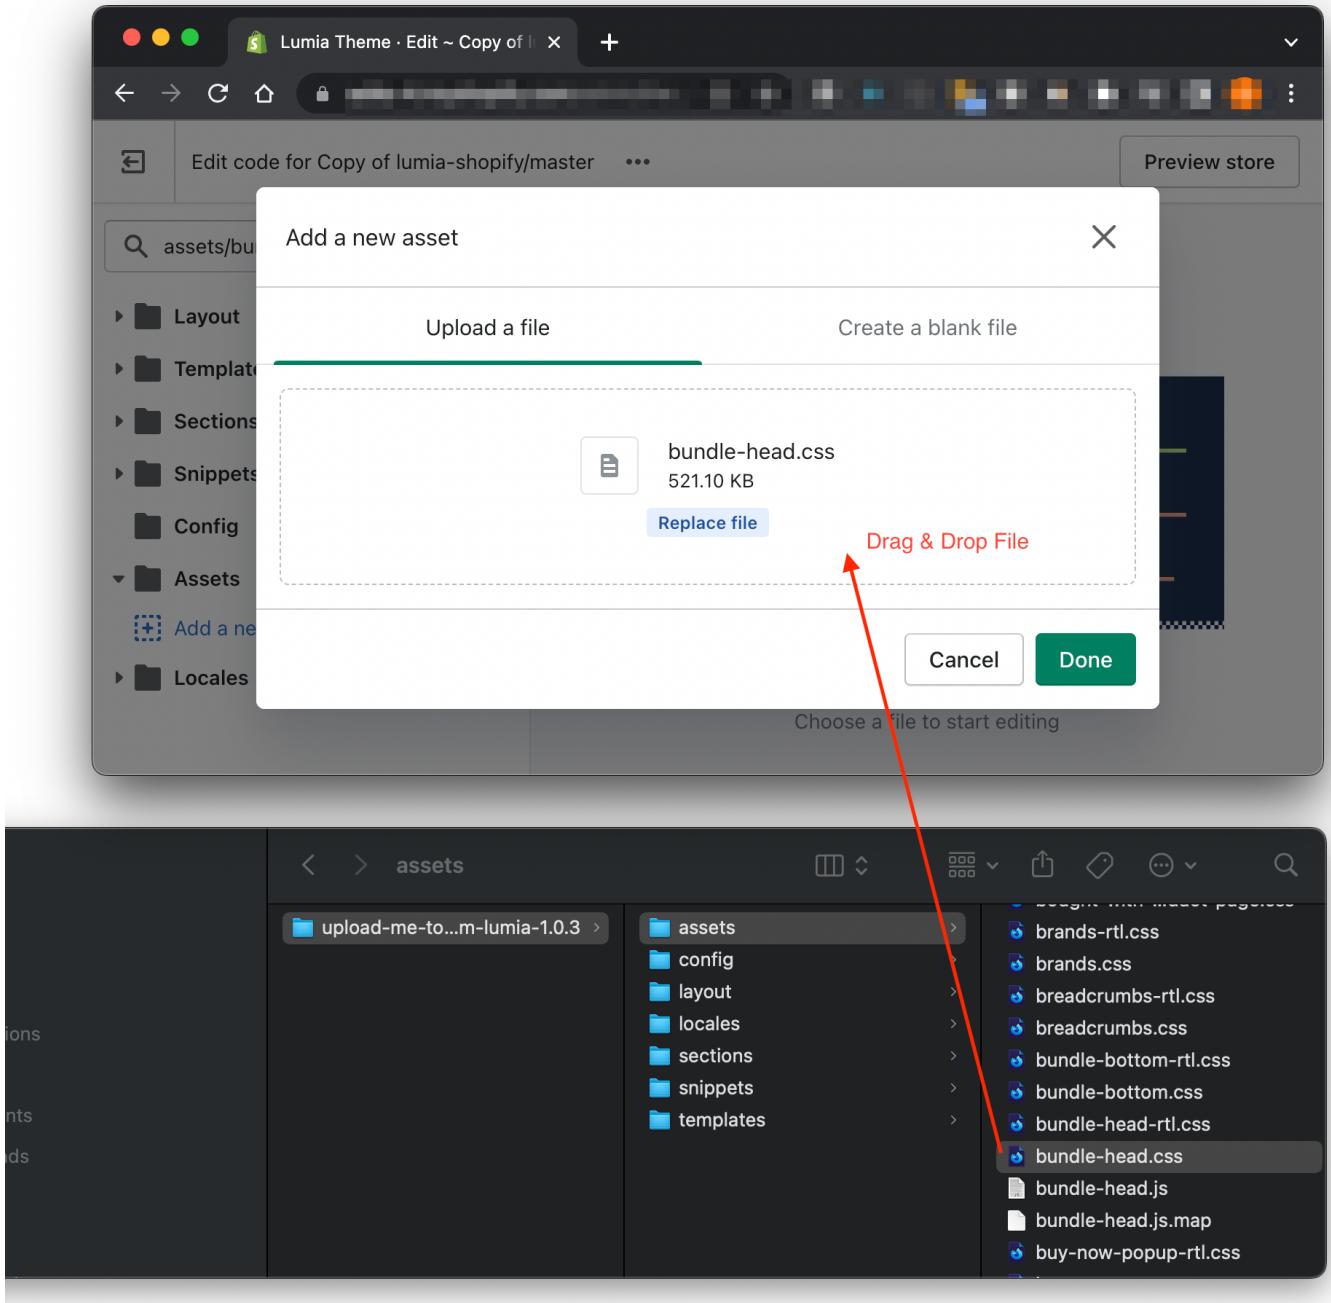

To do this, go to the theme file editor that we've opened as was described in **Updates / Open theme files editor**.

Next, unzip the theme archive `upload-me-to-shopify-platform-lumia-1.0.3.zip` that is downloaded locally.

Next, Click **Add a new asset**

And upload the fresh library **assets/bundle-head.css** to the server from the unzipped theme `upload-me-to-shopify-platform-lumia-1.0.3.zip`

Thus, you need to replace all the libraries that are mentioned in the first paragraph of the instruction.

- i For your convenience, we advise you to upload all the necessary libraries from a local folder at once. The theme editor supports multi-uploading files. But be careful and don't miss any library, otherwise the theme may not work correctly.

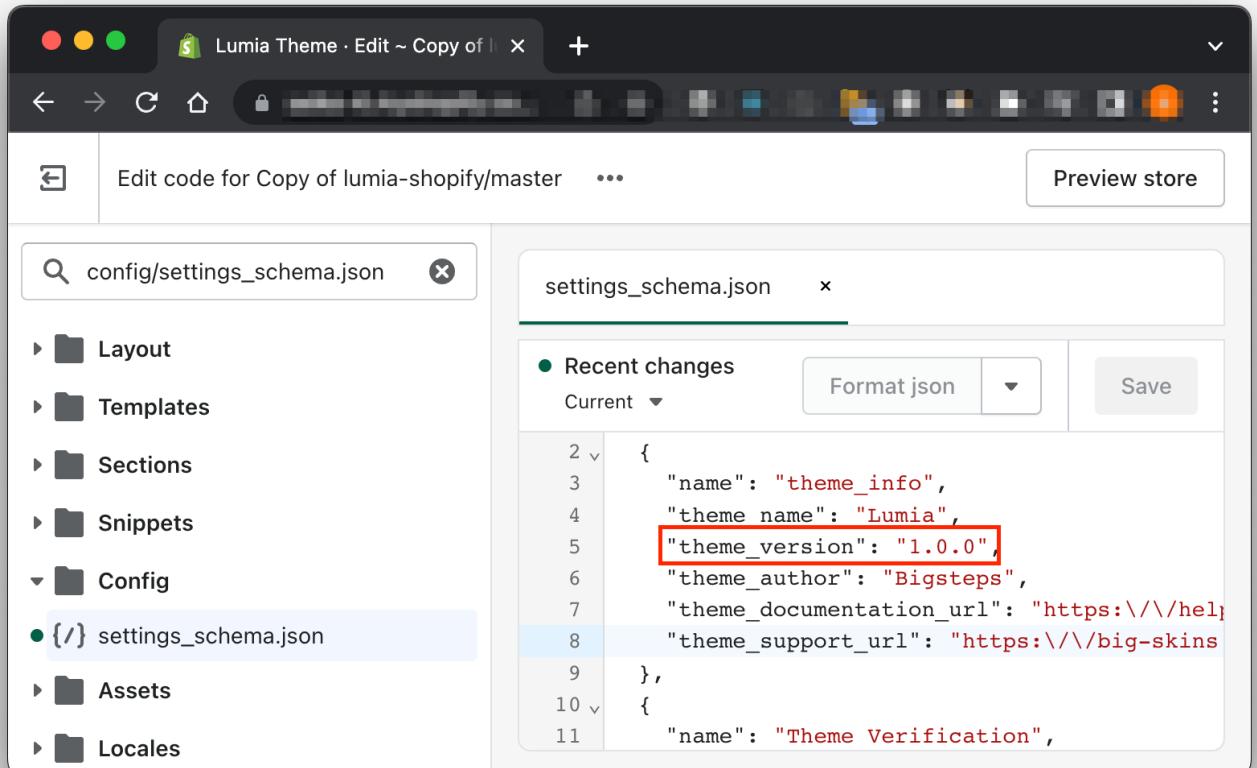

5 2. Make changes line by line

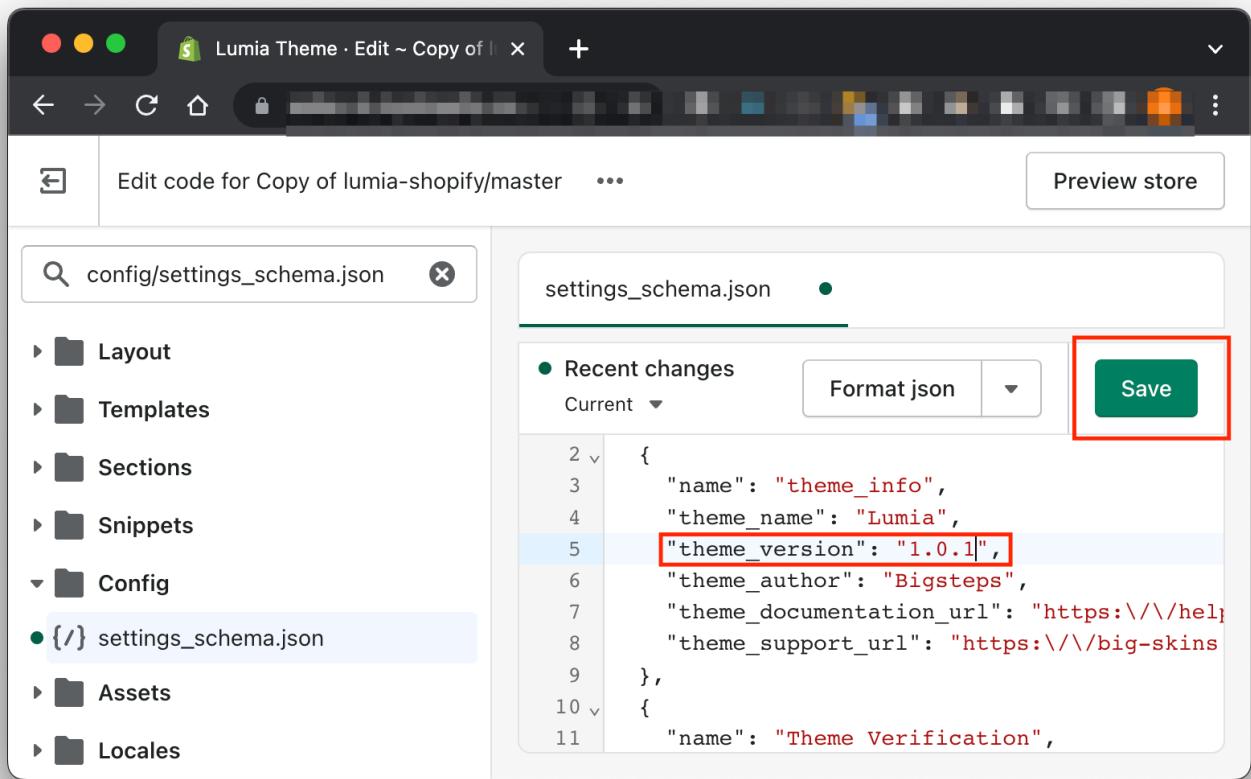

The second step in the instructions is to replace strings in different files. In the tables it is shown on the left as it is now on the server (-) / on the right it is shown as it should be (+). You need to delete what is on the left and do what is on the right.

Consider the example of changes in the first file in the second paragraph of the instruction.

| config/settings_schema.json CHANGED | |

Go to the online theme editor, look for the file **config/settings_schema.json** and replace "**theme_version": "1.0.0"** with "**theme_version": "1.0.1"**

Click Save.

You must go through all the instructions in all files specified for manual modification.

"If your theme version is too old, you'll likely need to make multiple updates. Make all updates one by one in a cycle as mentioned in third step **Make changes according to instructions**. However, if you've already uploaded everything from the latest version, you won't need to upload the libraries again.

3. Manual update if did not customize theme files and only customized theme in the admin editor

1 Download your current customized theme and unzip

Go to the **Online Store > Themes** and click **Download theme file**.

2 Re-Download the latest theme from themeforest.net from your account / downloads section and unzip theme zip file

3 Copy and Replace templates folder from Your theme to Latest

Files in this folder store your theme sections.

4 Copy and Replace config/settings_data.json file from Your theme to Latest

This file stores your theme general settings.

5 Zip Latest theme

6 Install Latest theme zip to your store

Add theme > Upload zip file

 If the installed theme does not work / has errors / or does not work the way it worked before, then this manual update method is not suitable in this case (your theme is very outdated or the new update has a conceptual difference and is very different in the new file structure or code) and you need to make a [manual update with code analysis](#). Manual update with code analysis is 100% working but you have to be a developer to understand what you are doing in the code by analyzing the changes.

Our team provides theme update service. The cost ranges from \$50 depending on the level of theme customization. First, we analyze your current theme - comparing it with the latest version and after we write the estimated time and price. And if you agree, we proceed to the update.

You can order for an update of your theme by emailing to bigstepscenter@gmail.com and name the subject of the letter **Request for updating the theme**.

Blogs

Your Shopify online store comes with a built-in blogging engine. Blogging is a great way to build your audience and generate more traffic and sales for your business. Setting up a blog can help you build a community around your products and your brand.

[Live preview ↗](#)

The screenshot shows the LUMA Shopify theme. At the top, there's a green header bar with the text "Save 30-70% Sitewide!!! Click And Copy Code: save70". Below the header, the LUMA logo is on the left, followed by a navigation menu with links: Home, Settings (new), Pages, Catalog (Sale), Women, Men, Contact Us, and a user icon. To the right of the menu are search and filter icons. The main content area has a breadcrumb navigation "Home > News". The "News" section title is centered above two news card components. The first news card, dated "20 Nov", features a pixelated image of a person wearing a brown jacket and has the headline "The perfect Shopify theme for your store". It includes a "READ ARTICLE" button and a "2 comments" link. The second news card, dated "13 Nov", features a pixelated image of a person wearing a brown jacket and has the headline "How to get started". It includes a "READ ARTICLE" button and a "4 comments" link. On the left side of the news cards, there's a "Featured Products" sidebar with four items: "men 7 \$0.00", "men 6 \$0.00", "men 5 \$0.00", and "men 4 \$0.00", each with a small thumbnail and a five-star rating. Below this is a "Featured Posts" sidebar with a thumbnail of a person and the text "How to optimise your Shopify theme".

Enabled by default: Yes

Visibility: Blog page

Add a blog

Your online store has a default blog called `News`. You can keep this blog, or you can create your own with a custom name.

If you haven't created a blog post yet, then perform the following steps to create a new blog with a custom name. To perform these steps, you need to create a blog post at the same time.

Steps to create blog

1. From your Shopify admin, click **Settings > Apps and sales channels**.
2. From the **Apps and sales channels** page, click **Online store**.
3. Click **Open sales channel**.
4. Click **Blog Posts**.
5. Click **Create blog post**.
6. In the **Title** field, enter a title for your blog post.
7. In the **Content** field, enter content for your blog post.
8. In the **Organization** section, from the **Blog** drop-down menu, select **Create a new blog**.
9. In the **Blog title** field, enter a title for the blog.
10. Click **Save**.

Add a post

After you've created a blog, you can start writing your blog posts. Your posts can contain both text and images. You can choose to publish a post immediately, or else set a specific publishing date.

Steps to add post

1. From your Shopify admin, click **Settings > Apps and sales channels**.
2. From the **Apps and sales channels** page, click **Online store**.
3. Click **Open sales channel**.
4. Click **Blog Posts**.
5. Click **Add blog post**.
6. On the **Add blog post** page, enter a title for your blog post. You need to write a title to save the post.
7. Enter the blog post content. This field uses the rich text editor, so you can format your post content. You can also add an image, embed a video or other media, or insert a link.
8. Choose the settings for your blog post:

- **Author:** From the drop-down menu, select the name of the person writing the post. Only the names of the store owner and staff appear in the drop-down menu.
- **Blog:** Select the name of the blog where the post will be published. If you don't want to publish to one of your existing blogs, then you can create a new blog in the drop-down menu.

9. Blog posts are hidden by default and won't appear on your online store. If you're ready to publish the post, then select **Visible** in the **Visibility** section, or set a specific publishing date for the post. You can edit or delete a published blog post at any time.

10. Click **Save**.

Blog Page

Templates

Each blog page has a template associated with it (by default it is **Default**). You can also create your own. Templates are a collection of sections that are configured to give your online store a consistent look and feel.

Sections

The default blog page template supports sections and you can extend the page with sections from **Sections Everywhere** catalog. The main section of the default blog page template is the **Main blog** section.

Main blog section

This section is the default one on the blog page, so we will pay special attention to it here.

Blog posts

Blog posts is a part of a **Main blog section**.

Enabled by default: No

Steps to set layout

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Open the drop-down menu at the top of the page.
4. Select the **Blogs** template that you want to edit from the dropdown menu.
5. Click **Main blog** to view its settings.
6. Select **Left / Right** in **Sidebar** field.
7. Click **Save**.

Widgets

Featured products

The screenshot shows a sidebar on a website. On the left, there's a 'Featured Products' section with four items, each showing a small image, the product name (e.g., 'men 7'), price (\$0.00), and a five-star rating. Below this is a 'Featured Posts' section with one item, showing a small image, the post title ('How to optimise your Shopify theme'), and a brief description.

Tags filter

You can use tags to organize your blog posts into categories or by subject. For example, you could add a tag to all the posts about summer to create a summer category. Customers can click tags to find other blog posts in the same category. When a customer searches for a tag in your online store, matching blog posts will appear in the search results.

Enabled by default: Yes, but you need to [add tags to blog posts ↗](#)

Sortable block: Yes

Widgets limit per sidebar: 1

Steps to add / sort / edit widgets

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. From the dropdown menu, select the template that contains the section that you want to edit.
4. Click a section to load the content into the preview window and access the options available to you.
5. If **Add**: Click **+ Add block** and select a new block.
6. If **Edit**: Click on any block to view its settings.

The screenshot shows the Shopify editor interface. On the left, there's a sidebar with icons for preview, news, announcements, header, navigation dropdowns, template, main blog, footer, and products promotion. The main blog section is currently selected. A context menu is open over the 'Main blog' section, listing 'Featured Products', 'Featured Posts', 'Tags filter' (which is highlighted), 'Add block', 'Add section', and 'Add section'. In the background, there's a 'Featured Products' section with four items: 'men 7' (\$0.00), 'men 6' (\$0.00), 'men 5' (\$0.00), and 'men 4' (\$0.00). To the right, there are news cards for 'The perfect store builder' (date Nov 20) and 'How to get started' (date Nov 13), along with a 'READ ARTICLE' button.

7. Click **Save**.

Blog Post Page

Templates

Each blog post page has a template associated with it (by default is **Default**). You can also create your own. Templates are a collection of sections that are configured to give your online store a consistent look and feel.

Sections

The default blog post page template supports sections and you can extend the page with sections from **Sections Everywhere** catalog. The main section of the default blog post page template is the **Main blog post** section. The section consists of the child blocks.

Main blog post section

[Live preview ↗](#)

Enabled by default: Yes

Sortable section: Yes

Sortable section blocks: Yes

Visibility: Blog post page

Section admin interface

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Open the drop-down menu at the top of the page.
4. Select the **Blog posts** template that you want to edit from the dropdown menu.
5. Click **Main blog post** section to view its settings.

Create your own view with sortable section blocks

The main section consists of independent blocks with their own settings and sorting.

Available sortable blocks:

- App
- Featured image
- Title
- Content
- Share
- Featured post

The screenshot shows the Shopify editor interface for creating a blog post. On the left, a sidebar lists available blocks: Announcements, Header, Navigation dropdowns, Main blog post (selected), Footer, and Products promotion. The Main blog post section contains sub-blocks: Featured image, Title, Share, Content, and several content items like 'Successful store with Lumia' and 'Get ahead with the power of ...'. It also includes 'Add block' and 'Add section' buttons. A red arrow points from the 'Share' button to a 'Share' icon in the main content area. Another red arrow points from the 'Content' sub-block to a large text block in the center. A third red arrow points from the 'Title' sub-block to the title 'The benefits of using Shopify'. The main content area displays the title 'The benefits of using Shopify', a date 'Date: November 23, 2021', a 'Posted By' label with 'lumia admin', and social sharing icons for Instagram, Facebook, TikTok, Twitter, and YouTube. Below the content, a text block states: 'Lumia Theme has a built-in subscriptions module. This means that you don't need to buy any additional apps. Subscriptions can be a great way to encourage customers to keep coming back to your store.' At the bottom, a footer bar includes the text 'Shopify is the second most popular eCommerce store' and links to 'LUMIA THEME' and 'GET STARTED'.

Austin Bock

December 27, 2022

The theme is very modern and it is very easy to customise. I am constantly getting compliments on how amazing my shop looks. The layout is very customisable, easy to use even for people with no computer skills. Favourite thing is the amazing customer service, very prompt, professional and effective. If I could give them 6 stars, I would :)

POST COMMENT

Allow or disable comments on a blog

When you create a new blog, comments are disabled by default. The comment settings have three options:

- **Comments are disabled:** Visitors to your blog can't leave comments on posts.
- **Comments are allowed, pending moderation:** Visitors to your blog can leave comments, but you will need to review the comments before they appear on your blog.
- **Comments are allowed, and are automatically published:** Visitors to your blog can leave comments and they will appear on your blog without your review.

To manage comment settings:

1. From your Shopify admin, go to [**Online Store > Blog Posts**](#).
2. Click **Manage blogs**.
3. Click the name of the blog you want to edit.
4. In the **Comments** section, select the option that you want, and then click **Save**.

Free Shipping

Free shipping is a great way to encourage customers to spend more. For instance, we offer free shipping on orders over \$100 USD.

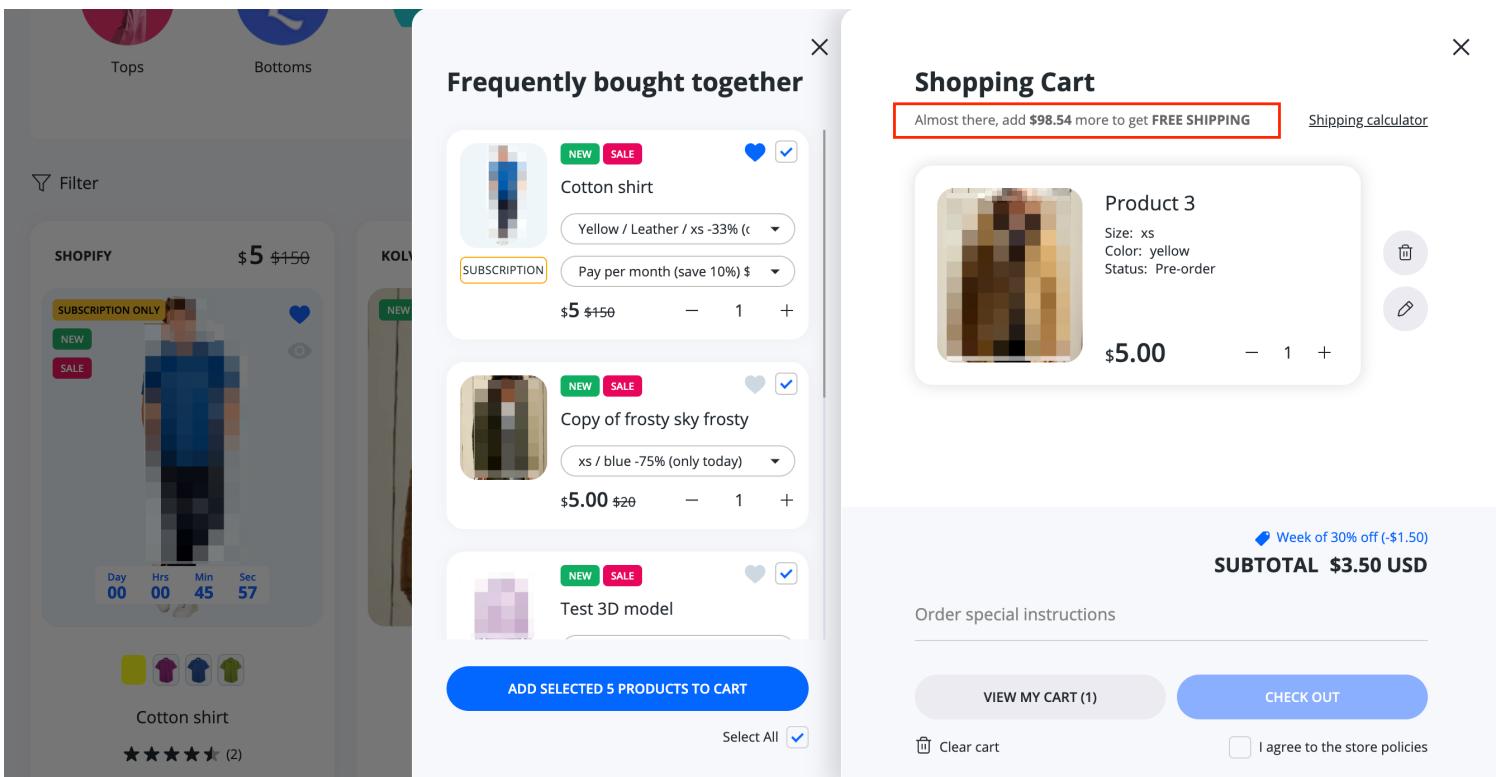

Unlike other themes, our free shipping module is genuine, not counterfeit.

First, it supports multiple currencies and automatically recalculates prices based on the user's selection. And secondly, free shipping is accounted for at the **real** checkout level, as evidenced in the **shipping calculator** screenshot.

The screenshot shows a shopping cart interface with the following details:

- Frequently bought together:** A section displaying three items:
 - Cotton shirt (KOLVIN KLEIN) - \$5 / \$150
 - Test 3D model - \$5.00 / \$20
 - Copy of 3D model - \$5 / \$150
- Get shipping estimated:** A section showing shipping rates to Ukraine, 54000:
 - Free Shipping:** Delivery days: 14 - 30, Delivery date: 6 Feb 2023, Delivery range: 7 Jan 2023 - 6 Feb 2023. Cost: \$0.00 USD.
 - Priority Mail International:** Delivery days: 6 - 10, Delivery date: 20 Jan 2023, Delivery range: 16 Jan 2023 - 20 Jan 2023. Cost: \$58.26 USD.
 - Priority Mail Express International:** Delivery days: 3 - 5, Delivery date: 13 Jan 2023, Delivery range: 11 Jan 2023 - 13 Jan 2023. Cost: \$73.62 USD.

Order Note

You can use order notes to collect special instructions from customers about how to prepare and deliver an order.

Form placements

Enabled by default: Yes

Steps to enable / disable

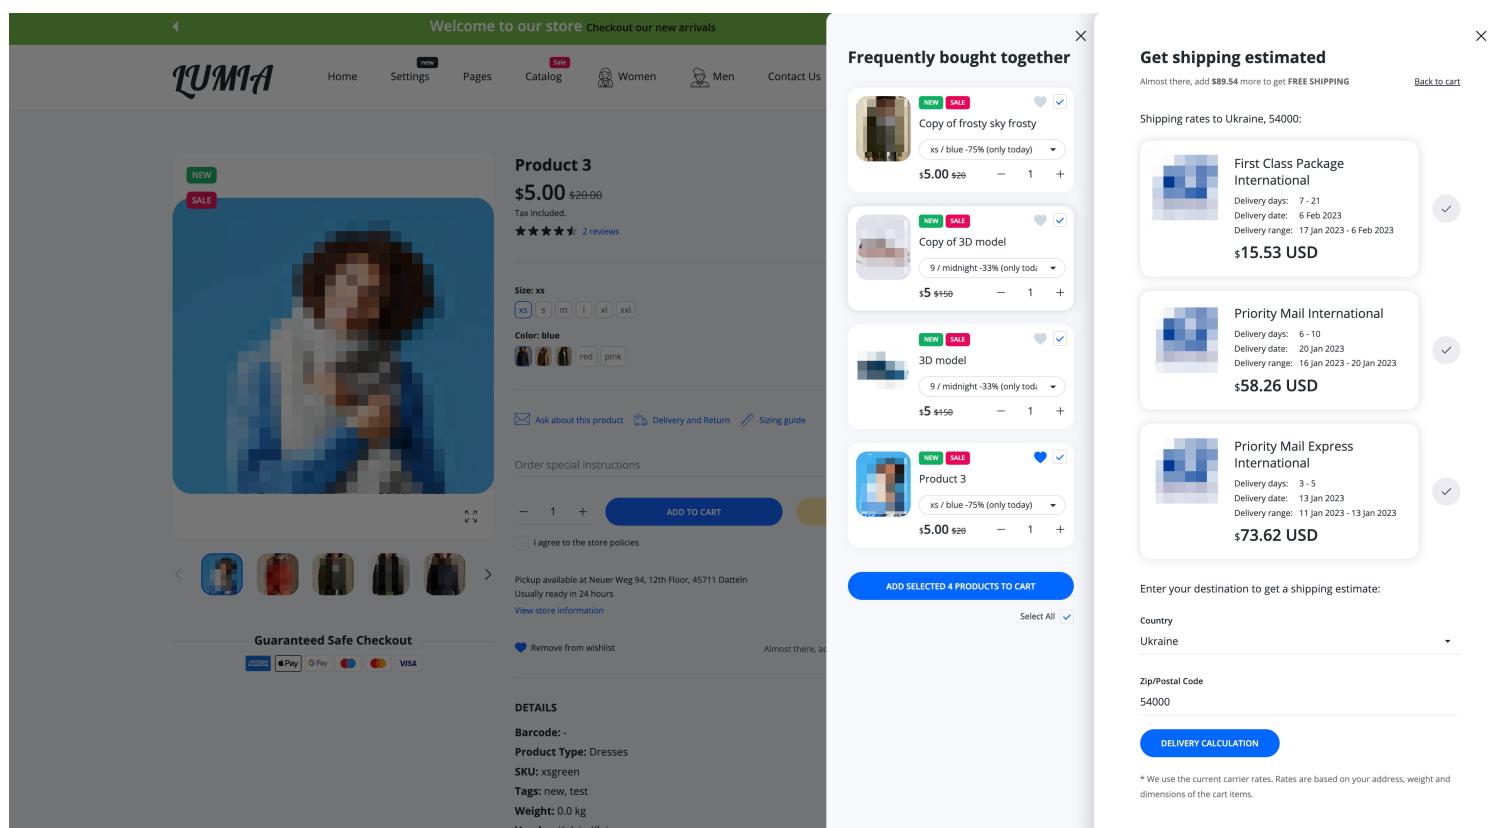

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Click **Theme settings**.
4. Click **Order note**.
5. Check / Uncheck **Enable** checkbox and click **Save**.

Shipping Calculator new

Shipping rates are what you charge your customer in addition to the cost of the products that they order. The cost of any shipping rates are added to a customer's order at checkout.

We are pleased to present our own development of the shipping calculator module. Other themes often use a free github script that doesn't actually work.

Now you can calculate shipping rates of the current cart on the fly either in the header cart or on a cart page without reaching the checkout page. You can set up world shipping suppliers for different regions in the original shopify functionality.

How it works on customer's side

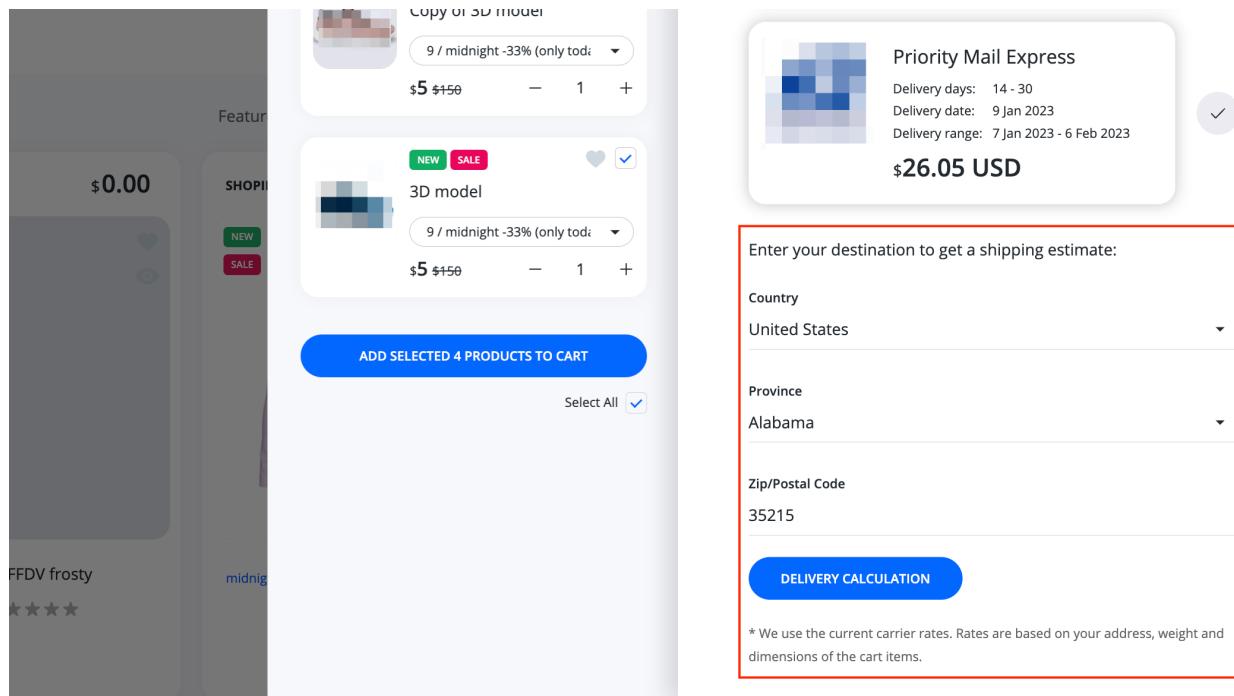

1 Add products to cart and click **Shipping Calculator**

The screenshot shows a mobile-style interface. At the top, there's a navigation bar with 'Home' and 'Settings'. Below it, a sidebar has 'Jacket' and 'Quick' buttons. The main area displays a 'Frequently bought together' section with two items: 'Suede sneakers' (SALE) and 'Men's work pants'. Both items have quantity selection dropdowns (set to 1) and '+' buttons. To the right is a 'Shopping Cart' section with one item: 'Worn stylish jeans' (Color: Gray, Size: XS) at \$50.00. A red box highlights the 'Shipping calculator' button in the top right corner of the cart area.

2 Enter your destination and click **Delivery calculation**

The screenshot shows a continuation of the interface. On the left, a sidebar shows a discount code 'Code: save70' and links for 'Men' and 'Contact Us'. The main area shows a 'Frequently bought together' section with three items: 'Cotton shirt', 'Copy of frosty sky frosty', and 'Test 3D model'. To the right is a 'Get shipping estimated' section. It includes a note about adding more to get free shipping, a 'Back to cart' link, and a form to enter a destination. The form fields are: 'Country' (United States), 'Province' (Alabama), and 'Zip/Postal Code' (ex., 35215 for USA Alabama). A large red box surrounds these three fields. Below the form is a 'DELIVERY CALCULATION' button and a small note: '* We use the current carrier rates. Rates are based on your address, weight and dimensions of the cart items.'

- i** Our module remembers the last entered destination and there is no need to re-enter the form again. This step will be automatically skipped and the calculation will be made immediately. But the form will still be displayed below the shipping rates for future changes.

Steps to enable / disable

1 Config theme settings

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Click **Theme settings**.
4. Click **Shipping rates calculator**.
5. Check / Uncheck **Enable** checkbox.
6. Enter **Default country selection**.

If your customer is logged-in, the country in his default shipping address will be selected.

If you are not sure about the spelling to use here, refer to the first checkout page.

7. Click **Save**.

2 Register shipping rates in Shopify

1. From your Shopify admin, go to **Settings > Shipping and delivery ↗**.
2. [Set up shipping profiles ↗](#).

3. [Set up shipping zones ↗](#).

4. [Setting up shipping rates ↗](#) with [Carriers ↗](#).

Collection Page

You can group your products into collections to make it easier for customers to find them by category. Here are some examples of collections that you might create:

- clothes for men, women, or children
- items of a certain type, such as lamps, cushions, or rugs
- items on sale
- items of a certain size or color
- seasonal products, such as holiday cards and decorations

You can edit a collection's name or description, change its featured image, or change the display order of its products. If you've created custom templates for your collection page, then you can also use a different template.

More common information about shopify collections you can read in [official documentaiton ↗](#).

Templates

Each collection has a template associated with it (by default is **Default**). You can also create your own. Templates are a collection of sections that are configured to give your online store a consistent look and feel.

Sections

Sections are modules that you can use to customize the layout of your online store. You can create templates which can then be customized by adding, removing, and rearranging sections and the blocks within. You can have up to 25 sections per template, and each section can contain up to 50 blocks.

Our theme has around **150 preset sections** (widgets) and **20 constructor sections**, allowing you to create and reuse your own preset sections. That is, the template can be unrecognizably versatile from store to store.

Main collection section

This section is the default one on collection page, so we will pay special attention to it here.

In this section

- Main Collection Section

Collection Filters

Collection Filters is a part of a **Main collection section**.

You can create filters for your online store that let customers refine which products appear on collection pages and in search results. For example, if you sell watches, you could create filters for brand name, price, dial size, and water resistance.

Filter types

You can select up to 5 default filters and up to 20 custom filters for your store.

Default filters

Filters for product availability, price, vendor, product type, and tags, are included by default.

i If your customer has their currency set to anything other than your store's primary currency, then the price filter will not be displayed.

Custom filters

Custom filters can be created using your product variant options, or with [Metafields ↗](#). For example, if you sell clothing with different variants for size, then you can add a filter for size.

Learn more about [adding custom filters with Metafields ↗](#).

Edit filters

You can edit the filters used in your online store from the app.

1. In the [Shopify Search & Discovery ↗](#) app, go to the **Filters** and then click **Edit filters**.
2. Select the filters that you want to make available to your customers.
3. Optional: Click and drag your filters to reorder them.
4. Click **Save**.

You can read more common information about filters in [official documentaiton ↗](#).

Color filters

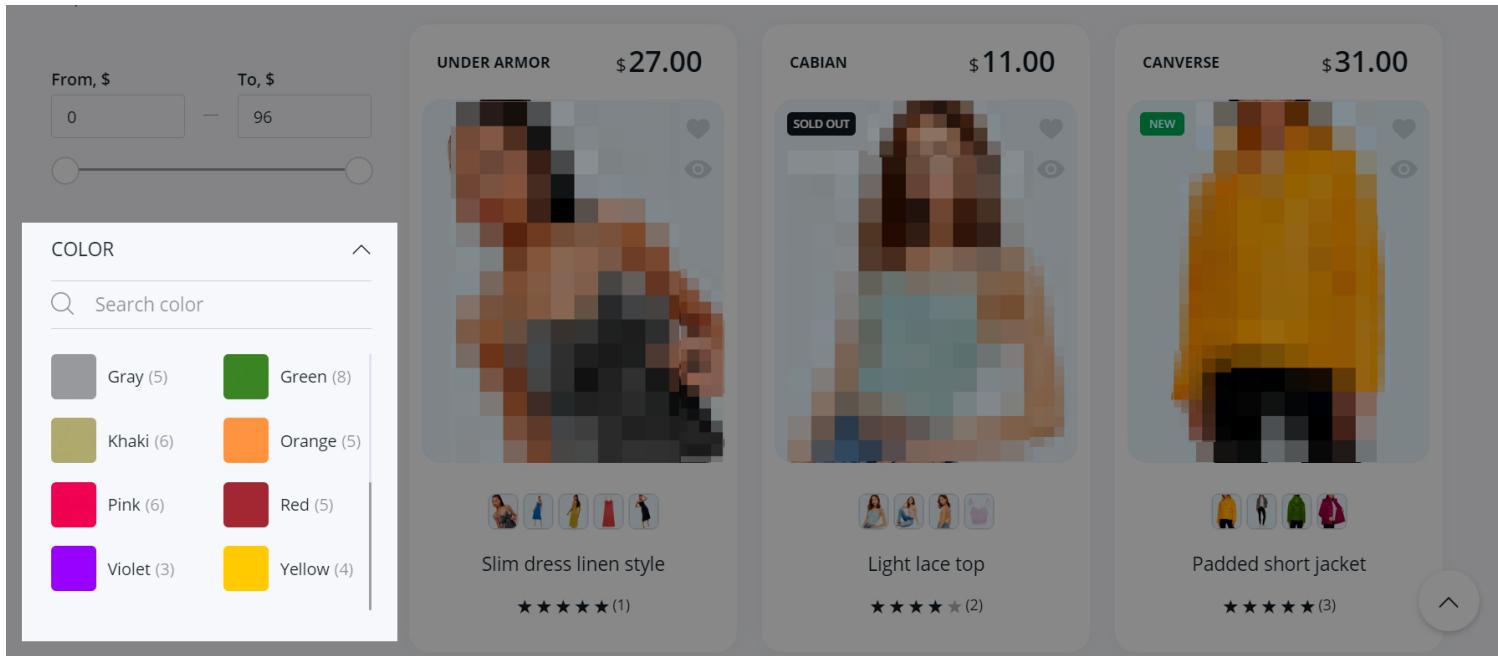

The filter of colors is displayed by default with checkboxes. But it is much clearer to have this list with pictures of colors. In order for this you need to upload a picture for each color.

Prepare pics for upload to store Content / Files

To upload any pic you just need to name the picture correctly. The name of the picture is the key to recognize that the picture contains a color.

The picture name pattern is as follows: `color-value-of-the-option.png` where `value-of-the-option` is the only variable part of the pattern.

Let's say you have the following set of colors:

So you have to upload the following pictures (**lower case name, 100 x 100 px size**):

1. pill-pic-**color-gray**.png
2. pill-pic-**color-khaki**.png
3. pill-pic-**color-pink**.png
4. pill-pic-**color-violet**.png
5. pill-pic-**color-green**.png
6. pill-pic-**color-orange**.png
7. pill-pic-**color-red**.png
8. pill-pic-**color-yellow**.png

i Pics will be automatically picked up for products with repeating options. That is, unique pics for options need to be loaded only once.

Upload

1. From your Shopify admin, go to **Content > Files**.
2. Click **Upload files**.
3. Select files to upload (up to 20 at one time), and then click **Open**.

An important note for a multilingual store!

Pictures will be visible only in the language version of the store, in which the name of the "color" property matches this word in the name of the pictures. Other store language versions will display color filters as only texts without images.

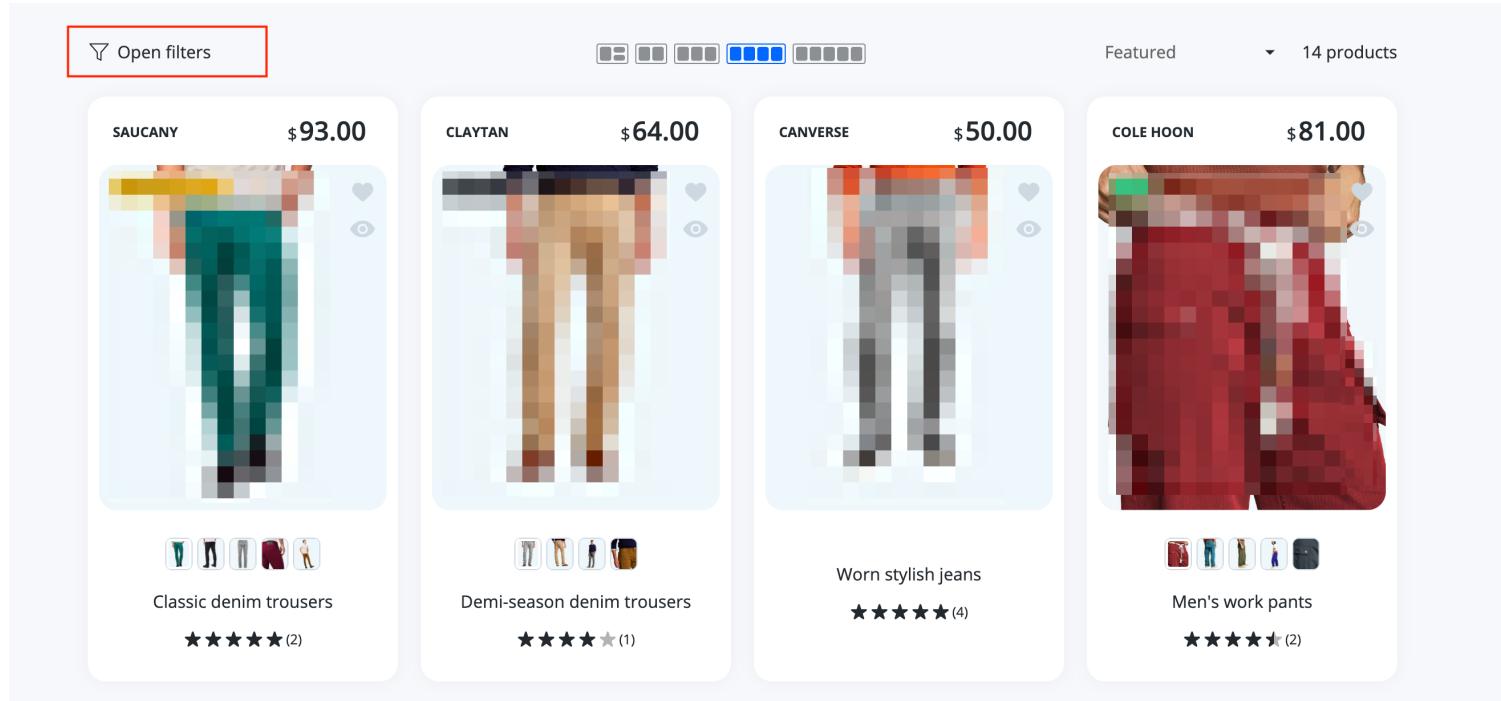

Once you have uploaded all the pictures with matching names, you need to enable the colored pics option in the admin. For this do next steps:

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Click **Theme settings**.
4. Click **Collection Page**.
5. In the **Color pics** group check **Replaces list filter style with pics** checkbox.
6. Click **Save**.

3. Click **Theme settings**.
4. Click **Collection page**.
5. Select any value from **list, 2, 3, 4, 5** in the **Products per row for desktop resolution** dropdown.

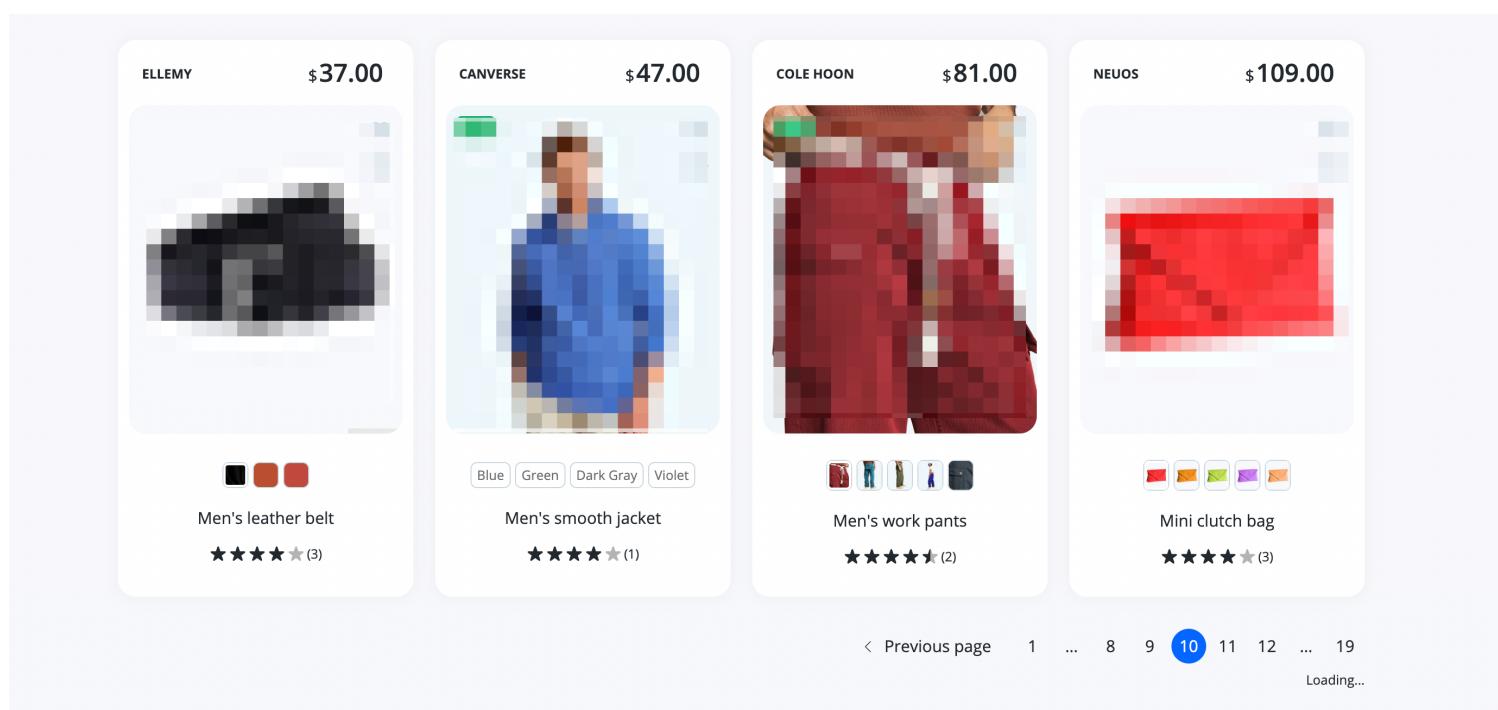

6. Click **Save**.

i The first view on the user's screen is set by the setting from the theme, but customer adjusts the further view independently from the storefront collection toolbar. The view (at current user's resolution) that the user chooses is stored in the user's session.

Features

Infinite Products default

Loading products on a scroll event improves the user experience and speeds up the search for the desired product. Therefore, this feature is made in our theme and is enabled by default.

Enabled by default: Yes

Steps to enable / disable

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.

3. Open the drop-down menu at the top of the page.
4. Select the **Collection page** template that you want to edit from the dropdown menu.
5. Click a **Main collection** section to view its settings.
6. Check / Uncheck **Infinite scroll** checkbox.
7. Click **Save**.

Featured filter

An exclusive extension for our theme. Top collection filter by brands or sub-collections. The description of the collection is displayed in the same container.

Brand filter default

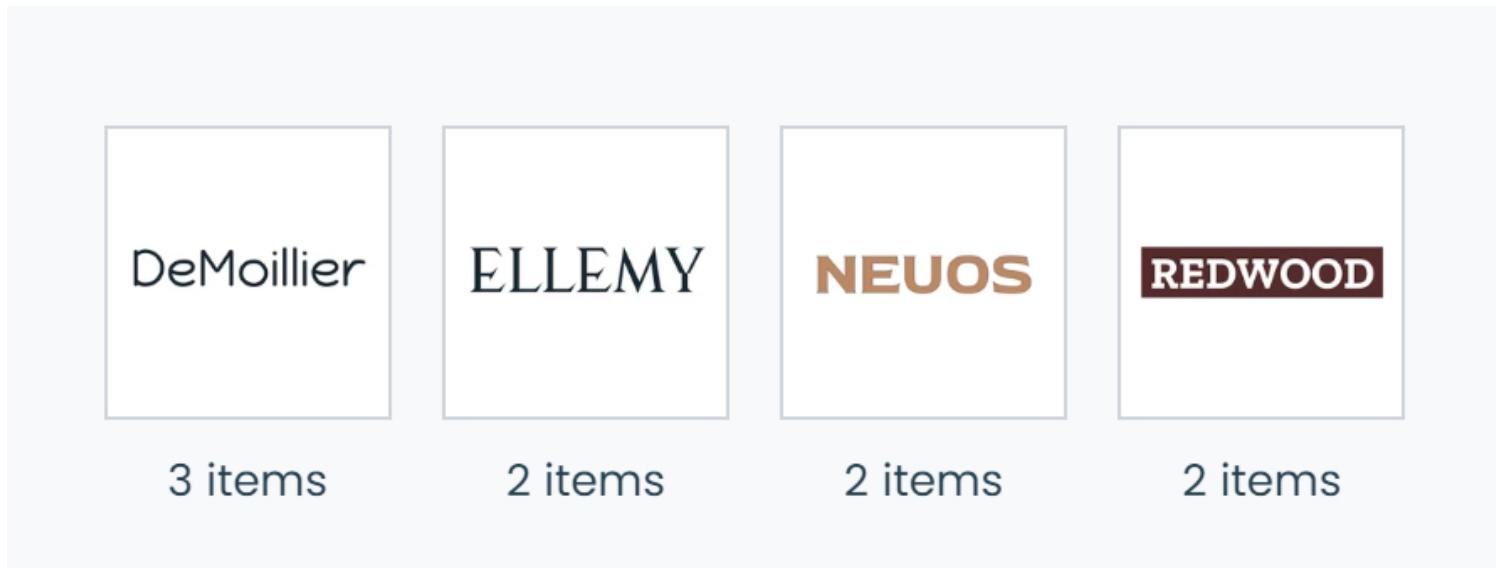

The screenshot shows a 'Women' collection page with 14 products. At the top left is a search bar with placeholder 'Search color'. Below it is a color filter section with a slider from \$0 to \$96. To the right is a grid of brand logos: CABIAN, CANVERS, CLAYTAN, CLOKRS, COLE HOON, COLVIN KLEIN, DACOSTE, and KOACH. Each logo has a circular badge below it indicating the number of items: 2 items for CABIAN, CANVERS, CLAYTAN, COLVIN KLEIN, and DACOSTE; 1 item for CLOKRS, COLE HOON, and KOACH. Below the grid is a 'Close filters' button and a 'Featured' dropdown. At the bottom, there are three product cards: KOACH (\$67.00), DACOSTE (\$16.00), and CABIAN (\$46.00). Each card includes a small image of a product and a 'SALE' badge.

Enabled by default: Yes

To upload any pic instead of a text pill with vendor title, you just need to name the picture correctly. The name of the picture is the key to recognize that the picture contains a vendor logo.

The picture name pattern is as follows: `vendor-name.png` where `name` is the only variable part of the pattern.

Let's say you have the following vendors: DeMoillier, Ellemy, Neuos, RedWood.

So you have to upload the following pictures (**lower case** name, recommended at least **500 x 500 px** size):

1. vendor-demoillier.png
2. vendor-ellemy.png
3. vendor-neuos.png
4. vendor-redwood.png

i Vendor names should never be translated into different languages in any multilingual app. If the name of the vendor and the variable part in the name of picture do not match, the image will not be displayed on the site.

Upload

1. From your Shopify admin, go to **Content > Files**.
2. Click **Upload files**.
3. Select files to upload (up to 20 at one time), and then click **Open**.

i Pics will be automatically picked up for vendors. That is, unique pics for options need to be loaded only once.

Subcollections new

The multi-level system of the parent-children collections is the most desired option in shopify. So far, there is no such option at the shopify platform level. But our theme supports a two-level system of parent-children collections. It is picked up by all important widgets: megamenu, breadcrumbs, sections with categories and subcategories.

Widgets that support subcollections

Megamenu

1st level of navigation

Catalog popup

The screenshot shows a catalog popup titled "Our Catalog" with a "hide previews" link. The interface includes a top navigation bar with links for Home, Settings, Pages, Catalog (which is highlighted with a red border), Women, Men, Contact Us, and user account information.

The main content area displays a grid of product categories, each with a preview image and a list of subcollections:

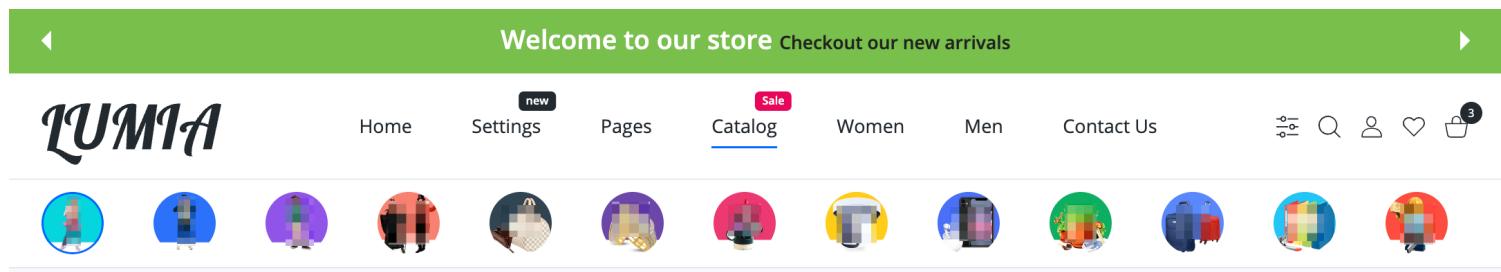

| Category | Subcollections |
|------------------------|---|
| WOMEN | Activewear, Dresses, One-Pieces, Outerwear, Pants, Shirts & Tops, View More |
| MEN | Arm Warmers & Sleeves, BalACLAVAS, Bandanas & Headties, Bridal Accessories, Earmuffs, Hand Muffs, View More |
| BABY & TODDLER | Baby Bathtubs & Seats, Shower Visors, Baby Health, Nasal Aspirators, Pacifier Clips & Holders, Baby Safety, View More |
| COSTUMES & ACCESSORIES | Bald Caps, Costume Accessory Sets, Costume Capes, Costume Gloves, Costume Hats, Costume Special Effects, View More |
| HANDBAGS & WALLETS | Checkbook Covers, Keychains, Lanyards, Wallet Chains, Badge & Pass Holders, Business Card Cases, View More |
| JEWELRY | Anklets, Body Jewelry, Bracelets, Brooches & Lapel Pins |
| BUSINESS & INDUSTRIAL | Advertising & Marketing, Agriculture, Cosmetology, Dentistry |
| CAMERAS & OPTICS | Accessory Sets, Bags & Cases, Body Replacement Panels, Digital Backs |
| ELECTRONICS | Arcade Equipment, Audio, Circuit Boards, Communications |
| HOME & GARDEN | Bathroom Accessories, Home Security, Decor, Emergency Preparedness |

Steps to enable

Full instruction how to enable Popup navigation item is described in **Megamenu** section.

Enabled by default: Yes

Steps to enable / disable

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Click **Theme settings**.
4. Click **Breadcrumbs**.
5. Check **Enable** checkbox.
6. In the fieldsgroup **Hide breadcrumbs for content types** uncheck / check **Collection** checkbox.
7. In the fieldsgroup **Hide breadcrumbs for content types** uncheck / check **Product** checkbox.
8. Click **Save**.

Other examples

Header with categories button

The screenshot shows the LUMIA theme's header. On the left is the brand logo "LUMIA". To its right is a search bar with placeholder text "Search by title, sku, type, vendor, description or tags" and a magnifying glass icon. Further right are user icons for profile, heart, and cart, with a small "3" notification badge above the cart. Below the header is a navigation bar with links: Home (underlined), Settings (with a "new" badge), Pages, Catalog (with a "Sale" badge), Women, Men, Contact Us, and Buy Theme (with a "Sale" badge). A vertical sidebar on the left is titled "CATEGORIES" and lists several car parts with icons and arrows: Brakes, Steering Wheel, Oil Car, Car Rims and Tire, Bumper, Car Seats, Auto Glass, and Filters. To the right of the sidebar is a main content area. A white overlay box is positioned over a banner image of a lake and mountains. The banner has large white text "00." and "& Tire". The main content area below the banner lists "Brakes" and its subcategories: Brake Discs, Brake Pads, Brake Shoes, and Drum Brakes.

Section categories with subcategories

The screenshot shows a section titled "Catalog subcategories" featuring four product categories with corresponding images and subcategory lists:

- BUILD MUSCLE**
 - Intra-Workouts
 - Muscle Building Stacks
 - Creatine
 - Protein
 - Amino Acids
 - Glutamine
- INCREASE ENERGY**
 - Herbal Energy Enhancers
 - Energy Shots
 - Energy Chews
 - Energy Gels
 - Energy Drinks
 - Pre-Workout Supplements
 - Non-Stimulant Energy
- IMPROVE WORKOUT**
 - Post-Workout Recovery
 - Pre-Workout Supplements
 - Creatine
- LOSE FAT**
 - Fat Burners
 - Stimulant-Free Fat Burners
 - Fat Control
 - Carbohydrate Management
 - Fat Loss Stacks

Section categories with slideshow

The screenshot shows a Shopify storefront with a dark header bar. The header includes links for HOME, SETTINGS, PAGES, CATALOG, WOMEN, MEN, and CONTACT US. On the right, there are icons for a user profile, a magnifying glass (search), and a shopping cart with a notification badge showing '3'.

The main content area features a large blue banner with a pixelated yellow and blue graphic. To the left of the banner is a white sidebar with a blue header titled "Categories". The sidebar lists several categories: Women (with a "test" tag), Men, Baby & Toddler, Costumes & Accessories, Handbags & Wallets, Jewelry, Business & Industrial, Cameras & Optics, and Electronics. A dropdown menu for "MEN" is open, listing subcategories: Arm Warmers & Sleeves, Balaclavas, Bandanas & Headties, Bridal Accessories, Earmuffs, Hand Muffs, Hats, Sunglasses, Suspenders, and Scarves & Shawls.

Below the sidebar, there are three colored buttons: a green one labeled "THE EVOLUTION OF", a yellow one labeled "THE EVOLUTION", and a pink one labeled "NEW ARRIVALS".

Steps to setup subcollections ecosystem

1 You need to create a global two level navigation

Create nested navigation of collections or use existing if you had created it before

1. From your Shopify admin, go to [Online Store > Navigation ↗](#).
2. Click **Add menu**
3. Enter a name for the menu in **Title** field.

Add parent collection

1. Click **Add menu item**.

2. Enter a name for the menu item. This name displays in the menu, and can include special characters or emoji.
3. Click the **Link** field, and then enter a specific parent collection.
4. Click **Add** to save your menu item.

Add child collection

1. Click **Add menu item**.
2. Enter a name for the menu item. This name displays in the menu, and can include special characters or emoji.
3. Click the **Link** field, and then enter a specific parent collection.
4. Click **Add** to save your menu item.
5. Click and drag the menu item to the nest below the header item.
6. Click **Save menu**.

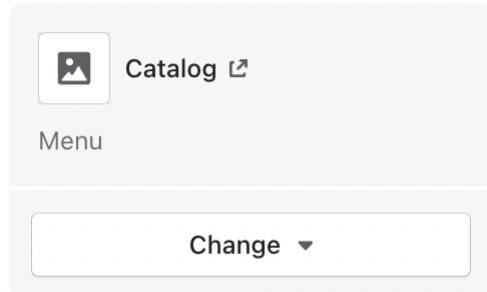

Thus, you must create a map linking collections to each other using two-level navigation.

2 Register created navigation

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Click **Theme settings**.
4. Click **Subcollections**.
5. Select your navigation from the first **Parent-child collections** field.
6. Click **Save**.

Parent-child collections

Main catalog that will be shown for header navigation type popup

- i You can merge multiple navigations by adding navigations to other free **Parent-child collections** fields.

Parent-child collections

Select menu

Megamenu

After adding products and creating collections, webpages, store policies, or blog posts, you need to organize them on your online store so that customers will be able to find them.

When you're setting up your online store, you should think about how you want customers to find your products and information about your business. This will help you to make decisions about your online store navigation.

Our team of programmers, together with designers, came to a common denominator on the necessary options for navigation layouts to make searching of the desired content easier.

Our menu is compatible with any shop since the source for it is the default Shopify [Navigations ↗](#).

Steps to assign dropdowns to default shopify navigation

1 Create nested shopify navigation

If you had done this step previously, you can skip it.

Menus and links from [official documentation ↗](#).

2 Bind shopify navigation with our theme

Miss this step if you had done it before.

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Click **Theme settings**.
4. Click **Header navigation**.
5. Select created navigation from the **Navigation** dropdown.

6. Click **Save**.

3 Assign **Default dropdown** layout to each of all 1st level navigation items.

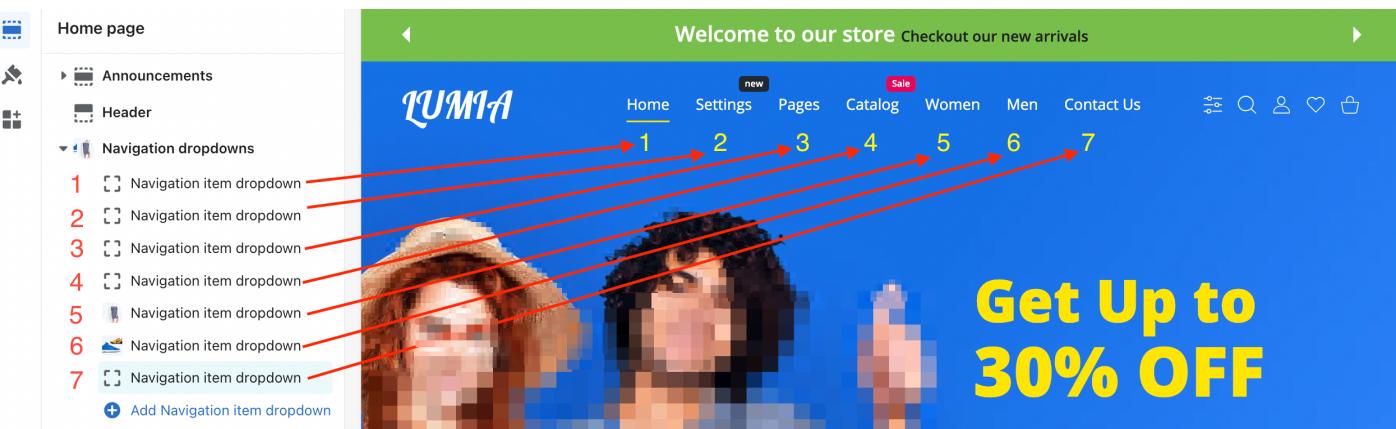

Miss this step if you had done it before.

There are 5 available dropdown layouts in our theme: **Default dropdown, Boxed, Fullwidth, Only column links, Popup**.

You necessarily need to assign a dropdown layout to each 1st level navigation item, even if it is the **Default dropdown**.

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Click **Navigation dropdowns** section.
4. Click **Add Navigation item dropdown** as many times as you have 1st level navigation items.

For example, we have seven 1st level navigation items in our demo, so we added seven blocks in **Navigation dropdowns** section.

5. Click **Save**.

By default, now all 1st level navigation items are set to **Default dropdown**. And if the some 1st level navigation item has child menu items, then a dropdowns will be shown as shown below.

| STORE PAGES | | BLOG OPTIONS |
|------------------------|---|----------------------------|
| Collections List | | Sidebar + List of articles |
| Blog | > | Sidebar + Grid of articles |
| Account | > | List of articles |
| Gallery | > | Grid of articles |
| About Us | | Blog post |
| Faq <small>new</small> | > | Right Sidebar |
| Contact Us | > | |
| Typography | | |
| 404 Page | | |
| Coming Soon | > | |

4 Change dropdown layout to another then Default dropdown

For example, if you want to apply a **Fullwidth** dropdown layout on the fifth item **Women**, then you must click on the fifth **Navigation item dropdown** block in the **Navigation dropdowns** section and select **Fullwidth** from **Layout** dropdown.

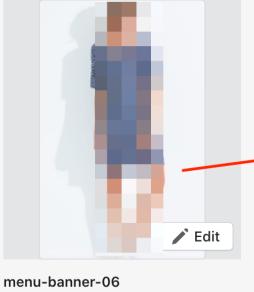

Thus, the **Fullwidth** dropdown layout will load the **Women** child menu items with columns in accordance to the design. Also, additional settings for Fullwidth dropdown layout immediately become available to you in the fieldsgroup -> **IF SELECTED 'FULLWIDTH'**.

3. **Assign Default dropdown layout to each of all 1st level navigation items** or miss this step if you had done it before.
4. As described in the step **Change dropdown layout to another then Default dropdown** click on the needed **Navigation item dropdown** block in the **Navigation dropdowns** section but select **Boxed** from **Layout** dropdown.

Admin interface

Thus, the **Boxed** dropdown layout will load the child menu items with columns in accordance to the design. Also, additional settings for **Boxed** dropdown layout will immediately become available to you in the fieldsgroup -> **IF SELECTED 'BOXED'**.

Fullwidth

The screenshot shows a fullwidth navigation bar for the LUMIA theme. On the left, there's a sidebar with 'CATEGORIES' and a list of items like Activewear (New), Chaps, Coats & Jackets, Dresses, One-Pieces, Outerwear, Pants, Shirts & Tops, and Sleepwear & Loungewear. To the right, there's an 'EXPLORE' section with links for Latest Arrivals, Our sales (We recommend), Bestsellers, Not expensive, Expensive, Exclusive, Season summer (50%), Season winter (Popular), and Season autumn (Popular). Below these are two promotional banners: one for 'SELECTED SHIRTS' with a 'Summer Sale' offer, and another for a 'Deal Of The Day' with a blue bag.

Enabled by default: No

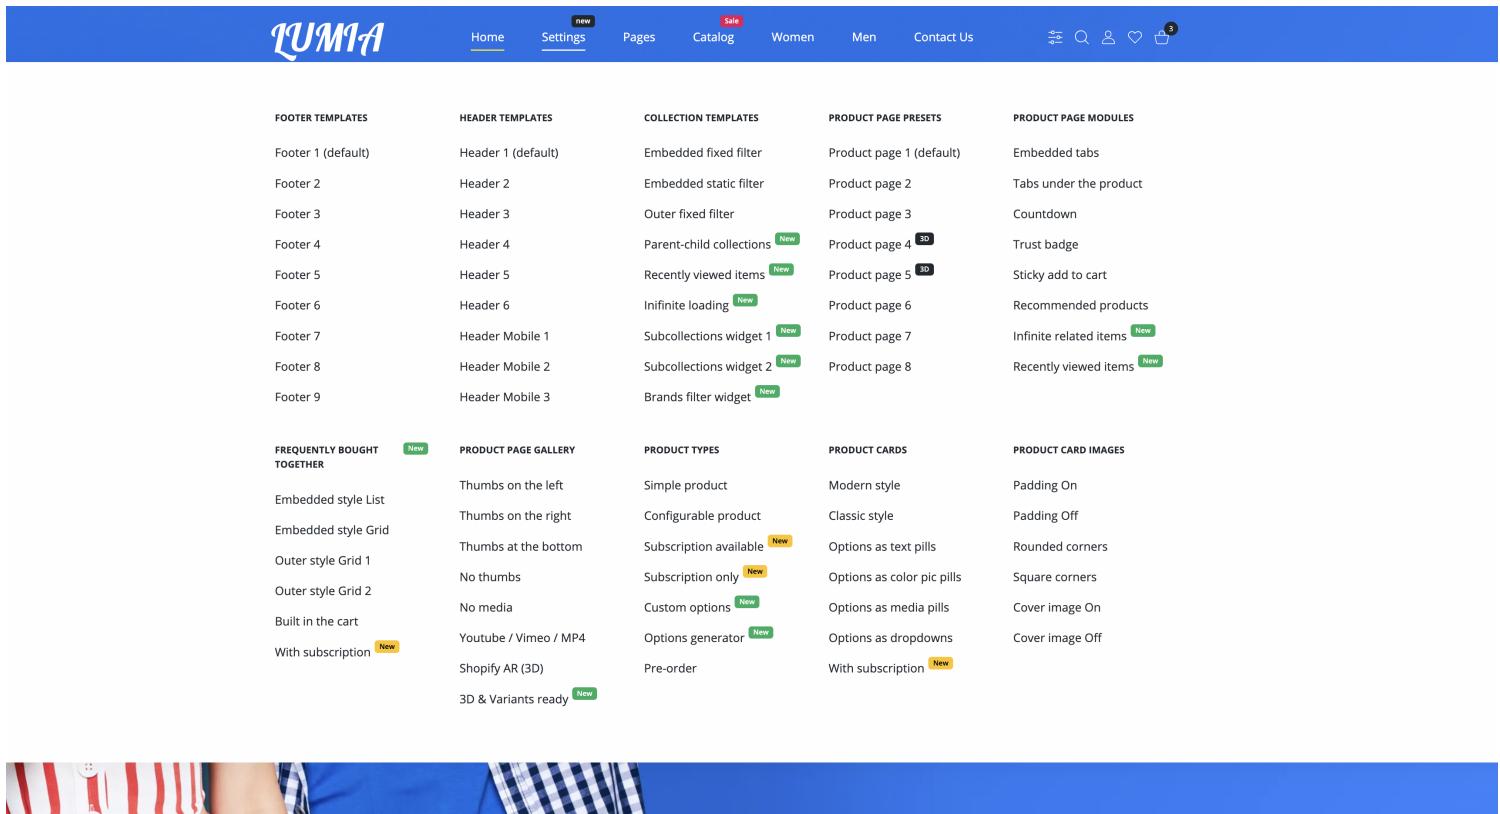

Sortable items: Yes

Active item support: Yes

Steps to enable

1. **Create nested shopify navigation** or miss this step if you had done it before.
2. **Bind shopify navigation with our theme** or miss this step if you had done it before.
3. **Assign Default dropdown layout to each of all 1st level navigation items** or miss this step if you had done it before.
4. Change dropdown layout to another then Default dropdown**.

Only column links

The screenshot shows the Lumia theme's settings interface. At the top, there's a navigation bar with links for Home, Settings (new), Pages, Catalog (Sale), Women, Men, Contact Us, and a search bar. Below the navigation is a large table with two main sections: 'FOOTER TEMPLATES' and 'HEADER TEMPLATES' on the left, and 'COLLECTION TEMPLATES', 'PRODUCT PAGE PRESETS', and 'PRODUCT PAGE MODULES' on the right. The 'FOOTER TEMPLATES' section lists nine items from Footer 1 to Footer 9. The 'HEADER TEMPLATES' section lists nine items from Header 1 to Header Mobile 3. The 'COLLECTION TEMPLATES' section lists five items: Embedded fixed filter, Embedded static filter, Outer fixed filter, Parent-child collections (New), and Recently viewed items (New). The 'PRODUCT PAGE PRESETS' section lists five items: Product page 1 (default), Product page 2, Product page 3, Product page 4 (3D), and Product page 5 (3D). The 'PRODUCT PAGE MODULES' section lists five items: Embedded tabs, Tabs under the product, Countdown, Trust badge, and Sticky add to cart. Below this table is another table titled 'FREQUENTLY BOUGHT TOGETHER' (New) which lists various styles for displaying related products like Thumbs on the left, Thumbs on the right, etc. To the right of these tables are sections for 'PRODUCT PAGE GALLERY', 'PRODUCT TYPES', 'PRODUCT CARDS', and 'PRODUCT CARD IMAGES'.

Enabled by default: No

Sortable items: Yes

Active item support: Yes

Steps to enable

Steps to enable

1. From your Shopify admin, go to [Online Store > Navigation ↗](#).
2. Click the name of the menu that includes the item.
3. In the **Menu items** section, click **Edit** beside the name of the item.
4. You need to add a pseudo elements in the end of **Name** field.

```
|badge-color:3|badge:My badge text
```

`badge-color` can be from 1 to 4 (preset colors):

- 1 - Black
- 2 - Orange
- 3 - Red
- 4 - Green

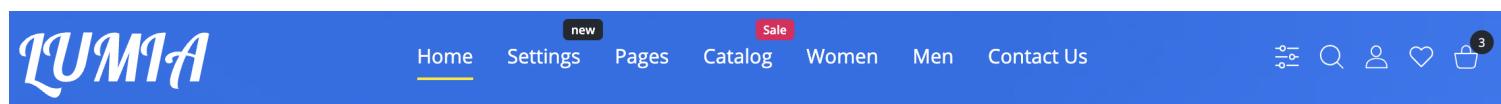

Each preset color you can change to your own in **Theme Settings > Colors - Badges**.

5. Click **Apply changes**.

6. Click **Save menu**.

Example from our demo

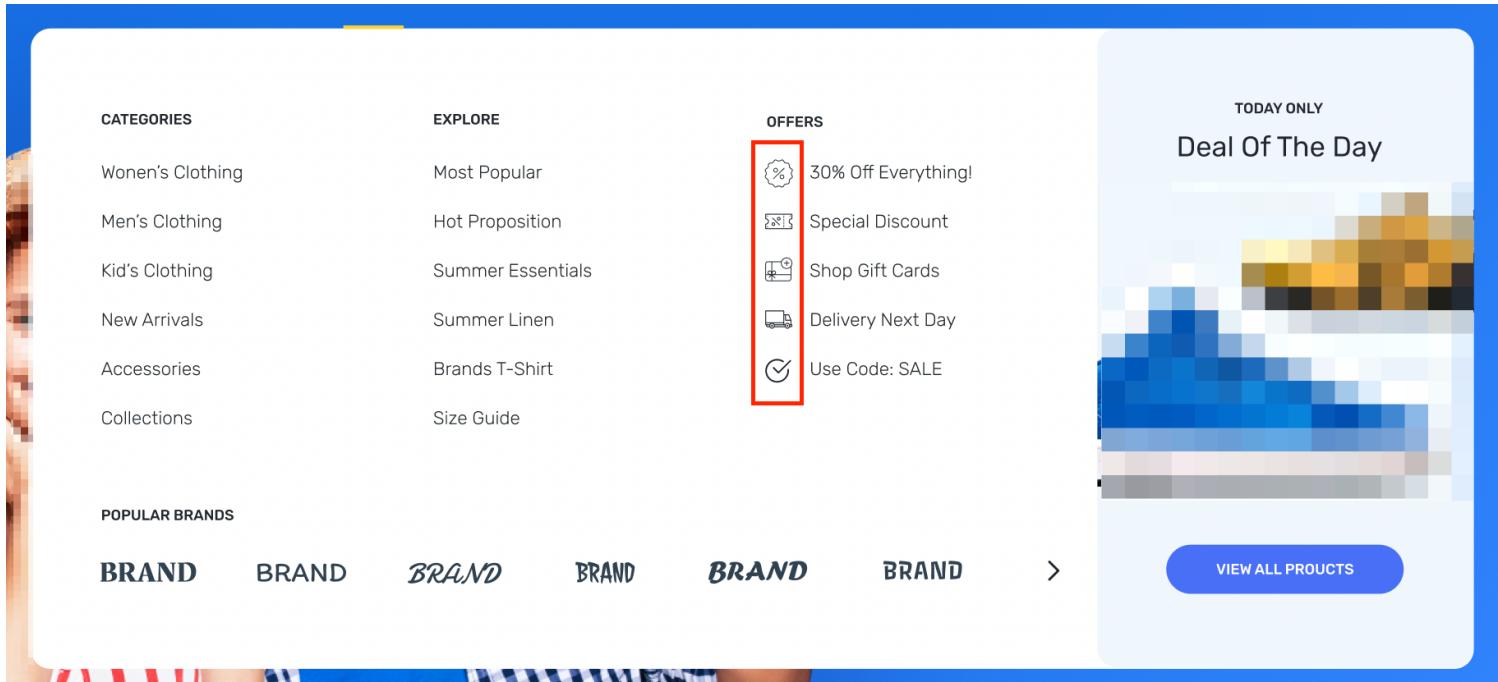

`Catalog` menu item.

`Catalog|badge-color:3|badge:Sale`

A screenshot of the LUMIA theme editor. On the left, there's a sidebar titled 'Main menu 2' with a back arrow icon. Below it, there's a 'Title' field containing 'Main menu 2'. Underneath, there's a 'Menu items' section listing two items: 'Pages|subtitle:Store pages' and 'Catalog|badge-color:3|badge:Sale|'. Each item has 'Edit' and 'Delete' buttons to its right. On the right side of the screen, a modal window titled 'Edit menu item' is open. It contains fields for 'Name' (with the value 'Catalog|badge-color:3|badge:Sale|') and 'Link' (with the value '/collections/all'). There are also dropdown menus for 'Handle' and 'More' with some options visible. A close button (X) is at the top right of the modal.

Icons

Steps to enable

1. From your Shopify admin, go to [Online Store > Navigation ↗](#).
2. Click the name of the menu that includes the item.
3. In the **Menu items** section, click **Edit** beside the name of the item.
4. You need to add a pseudo element in the end of **Name** field:

```
| icon:icon-code
```

icon-code you can get in the [available icons list ↗](#) or upload your own.

2. Click the name of the menu that includes the item.

3. In the **Menu items** section, click **Edit** beside the name of the item.

4. You need to add a pseudo element in the end of **Name** field:

| subtitle:My caption text

5. Click **Apply changes**.

6. Click **Save menu**.

Example from our demo

Pages menu item.

The screenshot shows the CMS interface for managing menu items. On the left, there's a list of menu items under the heading 'Menu items':

- Pages|subtitle:Store pages (with an 'Edit' button highlighted with a red box)
- Collections List
- Blog|subtitle:Blog options

On the right, a modal window titled 'Edit menu item' is open, showing the details for the 'Pages|subtitle:Store pages' item:

- Name:** Pages|subtitle:Store pages
- Link:** #

Pages|subtitle:Store pages

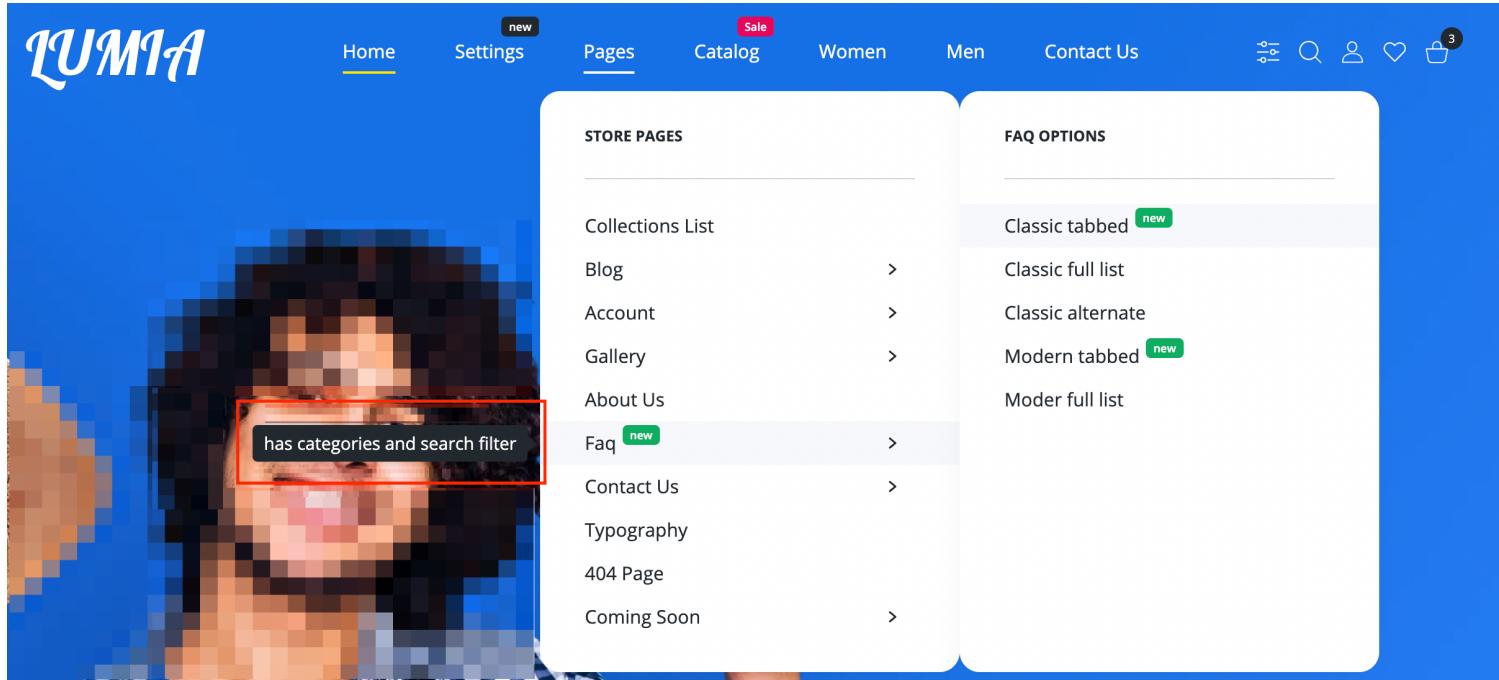

The screenshot shows the LUMIA store website. The top navigation bar includes links for Home, Settings, Pages (which is the active tab, indicated by a red box around its name), Catalog, Women, Men, Contact Us, and account-related icons.

A large image of a woman's face is on the left side of the page. A prominent yellow banner on the right side of the page says 'Get Up to 0% OFF'.

The 'Pages' menu is currently expanded, showing the following items:

- STORE PAGES (highlighted with a red box)
- Collections List
 - Blog
 - Account
 - Gallery
 - About Us
 - Faq (new)
 - Contact Us
 - Typography
 - 404 Page
 - Coming Soon

Text tooltip

Steps to enable

1. From your Shopify admin, go to [Online Store > Navigation ↗](#).
2. Click the name of the menu that includes the item.
3. In the **Menu items** section, click **Edit** beside the name of the item.
4. You need to add a pseudo element in the end of **Name** field:

```
| tooltip:My text tooltip
```

5. Click **Apply changes**.
6. Click **Save menu**.

Example from our demo

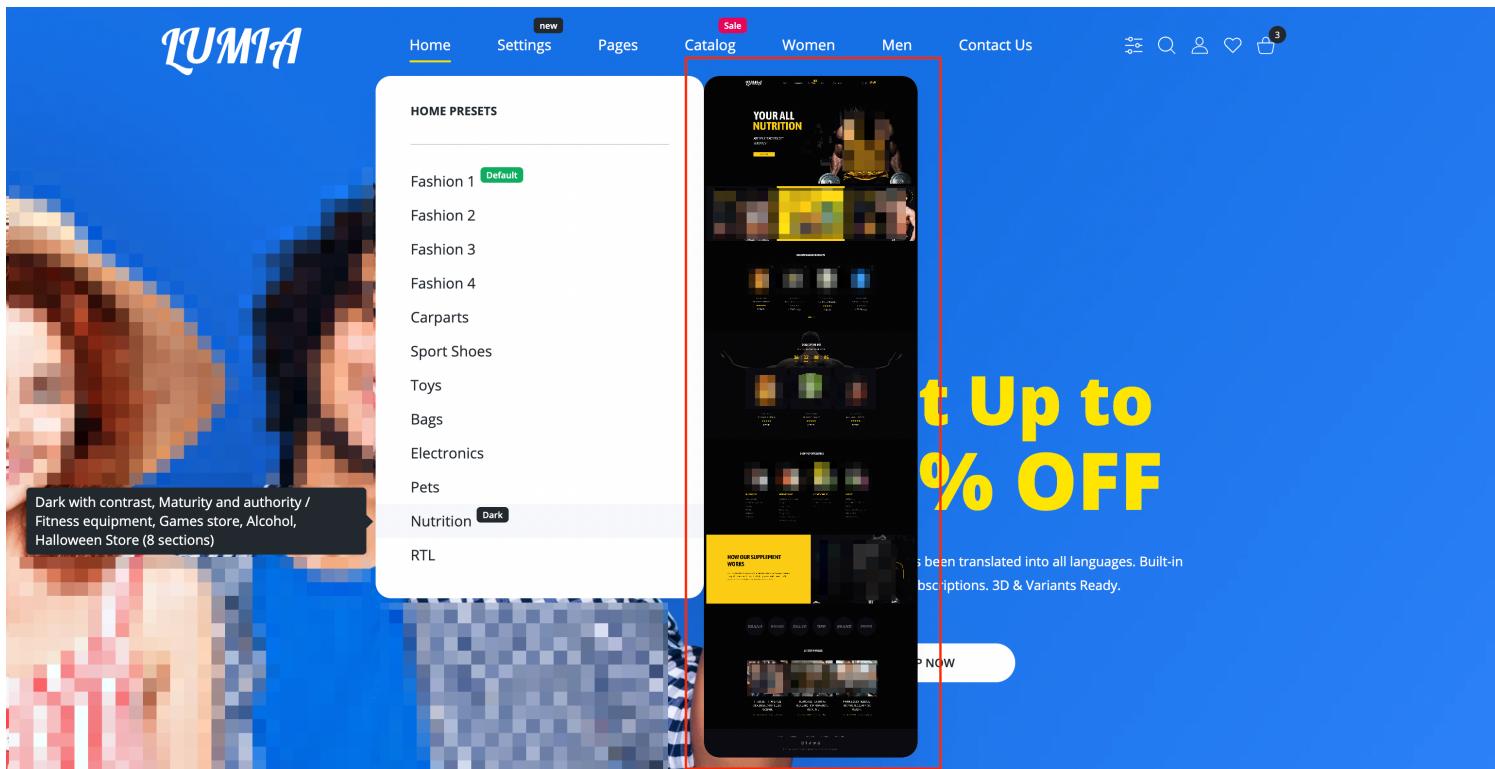

Pages > Faq menu item.

The screenshot shows the LUMIA CMS interface. On the left, there's a list of pages: 'FAQ|subtitle:Faq options|badge:new|badge-color:4|tooltip:has categories and search filter', 'Contact Us|subtitle>Contact us options|', and 'Typography'. Each page item has 'Edit' and 'Delete' buttons. A red box highlights the 'Edit' button for the FAQ page. On the right, a modal window titled 'Edit menu item' is open, showing a 'Name' field with the value 'ge-color:4|tooltip:has categories and search filter|' (with a blue border around it), and a close 'X' button.

Faq|subtitle:Faq options|badge:new|badge-color:4|tooltip:has categories and search filter

The screenshot shows the LUMIA storefront. The top navigation bar includes 'Home', 'Settings', 'Pages' (which is the active tab, indicated by a yellow underline), 'Catalog', 'Sale', 'Women', 'Men', and 'Contact Us'. Below the navigation is a large image of a person's face. A red box highlights the 'FAQ' menu item in the 'Pages' dropdown, which is labeled 'Faq [new]' and has a tooltip 'has categories and search filter' (also highlighted with a red box). The 'FAQ OPTIONS' section of the dropdown lists several variants: 'Classic tabbed [new]', 'Classic full list', 'Classic alternate', 'Modern tabbed [new]', and 'Moder full list'.

Image tooltip

Steps to enable

1. From your Shopify admin, go to [Online Store > Navigation ↗](#).
2. Click the name of the menu that includes the item.
3. In the **Menu items** section, click **Edit** beside the name of the item.
4. You need to add a pseudo element in the end of **Name** field:

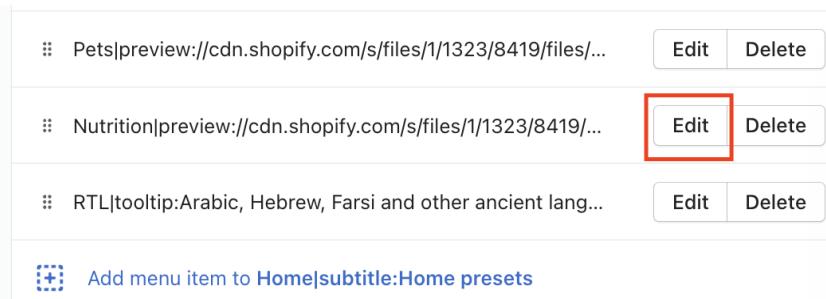

```
| preview:absolute_image_path
```

absolute_image_path is a path to the image that you must upload to the Shopify cdn server (from your Shopify admin, go to **Settings > Files > Upload files**)

5. Click **Apply changes**.
6. Click **Save menu**.

Example from our demo

Home menu item.

A screenshot of the Shopify Admin interface showing the 'Home' menu items list. It includes:

- Pets|preview://cdn.shopify.com/s/files/1/1323/8419/files/...
- Nutrition|preview://cdn.shopify.com/s/files/1/1323/8419/... (highlighted with a red box)
- RTL|tooltip:Arabic, Hebrew, Farsi and other ancient lang...

At the bottom, there's a button to "Add menu item to Home|subtitle:Home presets".

About Us

You can create webpages in your Shopify admin. Webpages contain information that rarely changes or that customers will often reference, like an "About Us" page or a "Contact Us" page.

We have already prepared our page preset **About us** for you. You can modify it and extend it with the help of many sections that are in our theme. Check out them in **Sections everywhere**.

Steps to create a page

1. From your Shopify admin, click **Online store**.
2. Click **Pages**.
3. Click **Add page**.
4. Enter a title and the content for the page.
5. In the **Online store** section, use the dropdown menu to select a **about-us** to apply to the page.
6. Under **Visibility**, select when the page should be published. By default, your new webpage is visible when you click **Save**. Select the **Hidden** option if you want your new webpage to be hidden from your online store, or click **Set a specific publish date** to control when your webpage is published.
7. Click **Save**.

Steps to config a page

1. From your Shopify admin, go to **Online Store > Themes**.
2. Click **Customize** on the published Lumia theme.
3. Open the drop-down menu at the top of the page.
4. Select the **Pages > about-us** template from the dropdown menu.
5. Page sections will appear on the left side where you can **edit / delete / add / sort** sections and blocks.

The screenshot shows the Shopify admin customization interface for the 'about-us' page of a 'Lumia' theme. On the left, a sidebar lists various page sections: 'about-us' (Assigned to 1 page), 'PREVIEW' (A few words about us), 'Announcements', 'Header', 'Navigation dropdowns', 'TEMPLATE' (with 'Info: Quote + Image' selected), 'Icons', 'Info: Text + Social media', 'Video', 'Info Charts', 'Instagram', 'Add section', 'Footer', and 'Products promotion'. The main content area displays a quote by 'Jack Donowan' with a signature, set against a background image of a person's face. The right side of the screen shows configuration options for 'Info: Quote + Image', including 'BOX MARGIN' (100px), 'Use global space on desktop' (checked), 'Vertical space above the section on Mobile' (70px), 'Use global space on mobile' (checked), 'BOX PADDING' (100px), and 'Use global inner padding on desktop' (checked). The top navigation bar includes links for Home, Settings, Pages, Catalog, Women, Men, Contact Us, and a search bar.

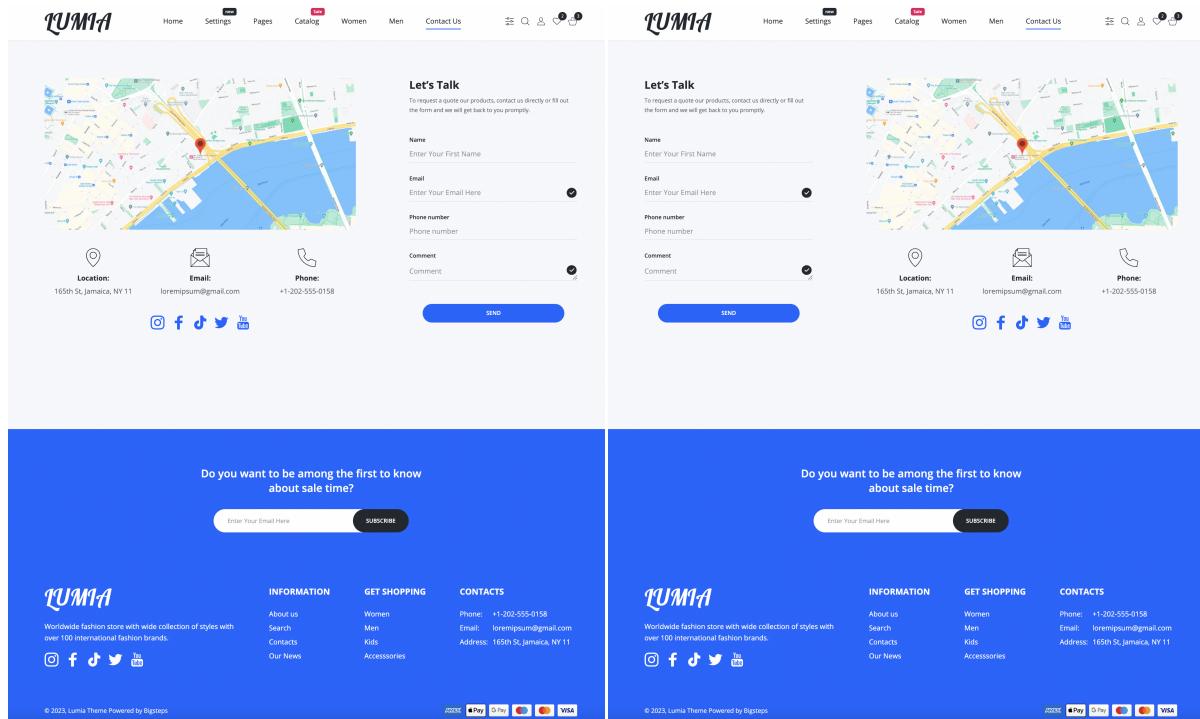

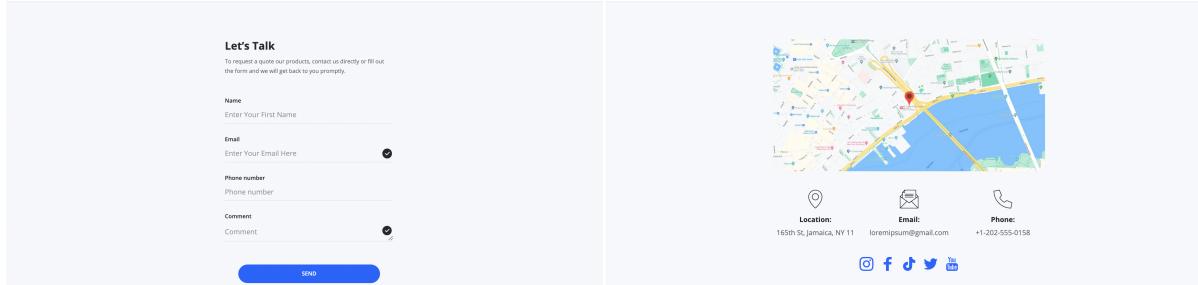

The template is only available for the published theme.

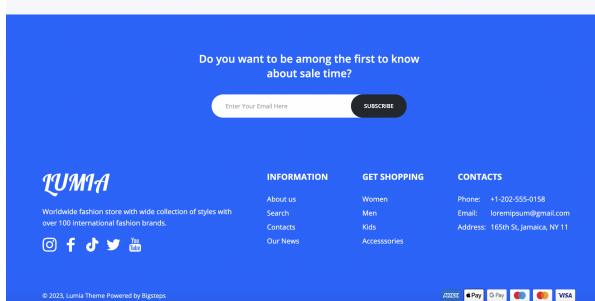

Contact Us

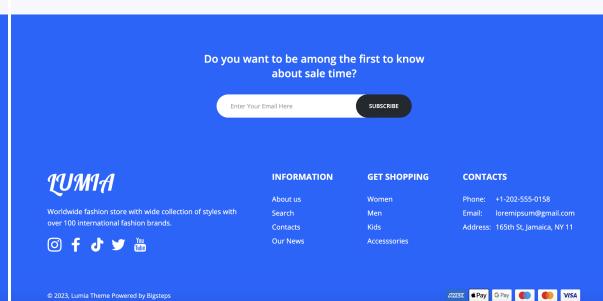

You can create webpages in your Shopify admin. Webpages contain information that rarely changes or that customers will reference often, like an "About Us" page or a "Contact Us" page.

We have already prepared our page preset **Contact us** for you. You can modify and extend it with the help of many sections that are in our theme. Check out them in **Sections everywhere**.

Steps to create a page

1. From your Shopify admin, click **Online store**.
2. Click **Pages**.
3. Click **Add page**.
4. Enter a title and the content for the page.
5. In the **Online store** section, use the dropdown menu to select a **contact** to apply to the page.
6. Under **Visibility**, select when the page should be published. By default, your new webpage is visible when you click **Save**. Select the **Hidden** option if you want your new webpage to be hidden from your online store, or click **Set a specific publish date** to control when your webpage is published.
7. Click **Save**.

Steps to config a page

1. From your Shopify admin, go to **Online Store > Themes**.
2. Click **Customize** on the published Lumia theme.
3. Open the drop-down menu at the top of the page.
4. Select the **Pages > contact** template from the dropdown menu.

5. Page sections will appear on the left side where you can **edit / delete / add / sort** sections and blocks.

i The template is only available for the published theme.

Add a Google map to a **Map** block

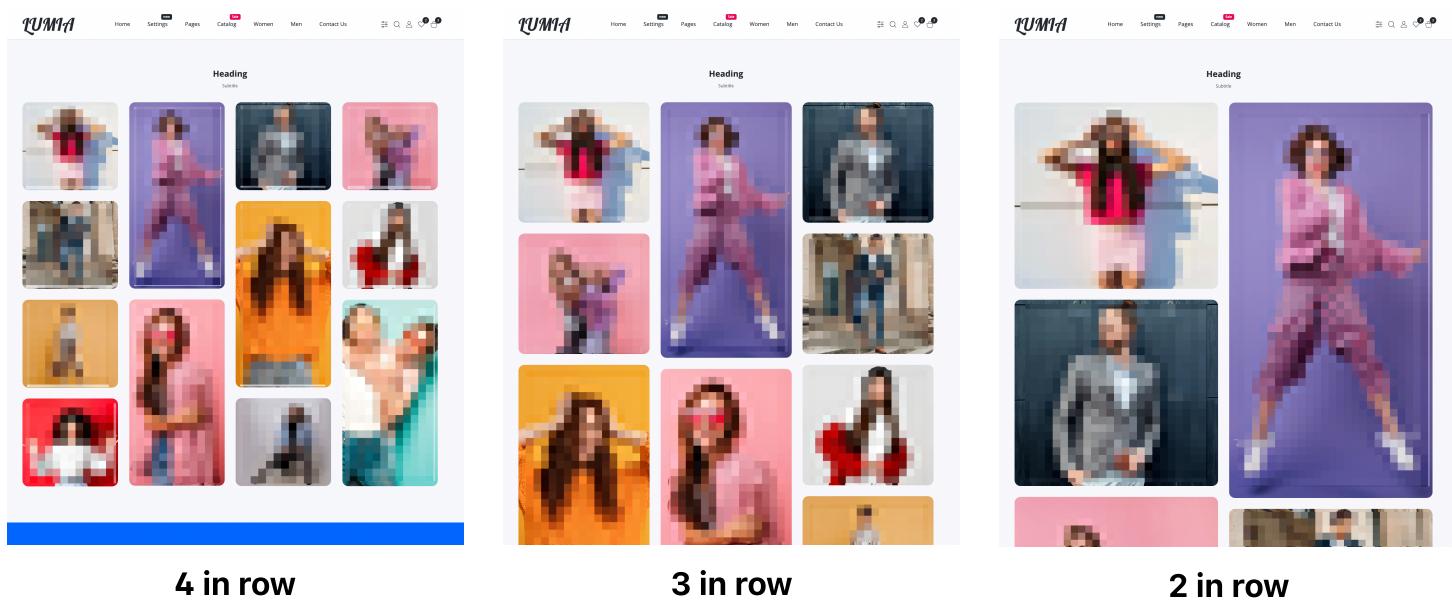

1. In [Google Maps ↗](#), enter the address you want to map.
2. Click the Share icon to open sharing options.
3. Click **Embed map** to create your embed code.
4. Choose the map size you want, then copy the code in the text box. The code begins with `<iframe src=` and is a tag written in HTML which embeds the map.
5. Click **Map** block to view its settings.
6. Paste the code you copied from Google Maps into the **Google maps Embed code** textarea.
7. Click Save.

i The map widget from google maps has a bad effect on the page speed metrics, but in our template it is displayed asynchronously on the click event on the map. Thus, the map passes the metrics by 100% efficiently.

Gallery

You can create webpages in your Shopify admin. Webpages contain information that rarely changes or that customers will reference often, like an "About Us" page or a "Contact Us" page.

We have already prepared our page preset **Gallery** for you. You can modify and extend it with the help of many sections that are in our theme. Check out them in **Sections everywhere**.

Steps to create a page

1. From your Shopify admin, click **Online store**.
2. Click **Pages**.
3. Click **Add page**.
4. Enter a title and content for the page.
5. In the **Online store** section, use the dropdown menu to select a **gallery** to apply to the page.
6. Under **Visibility**, select when the page should be published. By default, your new webpage is visible when you click **Save**. Select the **Hidden** option if you want your new webpage to be hidden from your online store, or click **Set a specific publish date** to control when your webpage is published.

7. Click **Save**.

Steps to config a page

1. From your Shopify admin, go to **Online Store > Themes**.
2. Click **Customize** on the published Lumia theme.
3. Open the drop-down menu at the top of the page.
4. Select the **Pages > gallery** template from the dropdown menu.
5. Page sections will appear on the left side where you can **edit / delete / add / sort** sections and blocks.

The screenshot shows the Shopify admin's theme customization interface. On the left, a sidebar lists sections like 'FAQ' (Assigned to 1 page), 'PREVIEW', and 'TEMPLATE'. Under 'TEMPLATE', a section titled 'FAQ' is selected, highlighted with a red border. This section contains a list of frequently asked questions. A red box highlights the 'FAQ' section in the sidebar and the list of questions below it. The main content area displays a preview of a page titled 'FAQ' with a heading 'Have a Question? Look here' and a search bar. To the right of the preview, there are several configuration options for 'FAQ' sections, each with a checkbox and a slider. These include 'BOX MARGIN' (60px), 'Use global space on desktop' (unchecked), 'Vertical space above the section on Desktop' (60px), 'Vertical space above the section on Mobile' (40px), 'Use global space on mobile' (unchecked), 'Vertical inner padding on Desktop' (100px), 'Use global inner padding on desktop' (checked), 'Vertical inner padding on Mobile' (70px), 'Use global inner padding on Mobile' (checked), and 'BOX BACKGROUND' (unchecked). At the bottom of the configuration area, there is a note: 'Lumia is the perfect theme for anyone who wants to create a shopify store without needing to worry about additional ...'.

i The template is only available for the published theme.

Faq

You can create webpages in your Shopify admin. Webpages contain information that rarely changes or that customers will reference often, like an "About Us" page or a "Contact Us" page.

We have already prepared our page preset **Faq** for you. You can modify and extend it with the help of many sections that are in our theme. Check out them in **Sections everywhere**.

-  We have made exclusive features for searching by questions and dividing questions into categories.

Steps to create a page

1. From your Shopify admin, click **Online store**.
2. Click **Pages**.
3. Click **Add page**.
4. Enter a title and the content for the page.
5. In the **Online store** section, use the dropdown menu to select a **faq** to apply to the page.
6. Under **Visibility**, select when the page should be published. By default, your new webpage is visible when you click **Save**. Select the **Hidden** option if you want your new webpage to be hidden from your online store, or click **Set a specific publish date** to control when your webpage is published.
7. Click **Save**.

Steps to config a page

1. From your Shopify admin, go to **Online Store > Themes**.
2. Click **Customize** on the published Lumia theme.
3. Open the drop-down menu at the top of the page.

4. Select the **Pages > faq** template from the dropdown menu.

5. Page sections will appear on the left side where you can **edit / delete / add / sort** sections and blocks.

The screenshot shows the Shopify theme editor interface for the 'Lumia' theme. The left sidebar has a red border around the 'FAQ' section, indicating it's selected. The main content area displays a page with a header 'Have a Question? Look here' and several sections of text. On the right, there's a detailed configuration panel for the 'FAQ' section, showing various padding and background settings.

The template is only available for the published theme.

Product Page

Your products are the goods, digital downloads, services, and gift cards that you sell. You add a product in Shopify by entering the product details and uploading the product images. If your product has options, such as size or color, then you can add a variant for each combination of options.

You view, add, update, and organize all of your products and variants from the [Products ↗](#) page in the Shopify admin. You can read more common information about products in [official documentaiton ↗](#).

Templates

Each product has a template associated with it (by default it is **Default**). You can also create your own or assign product to any of the special templates from our theme.

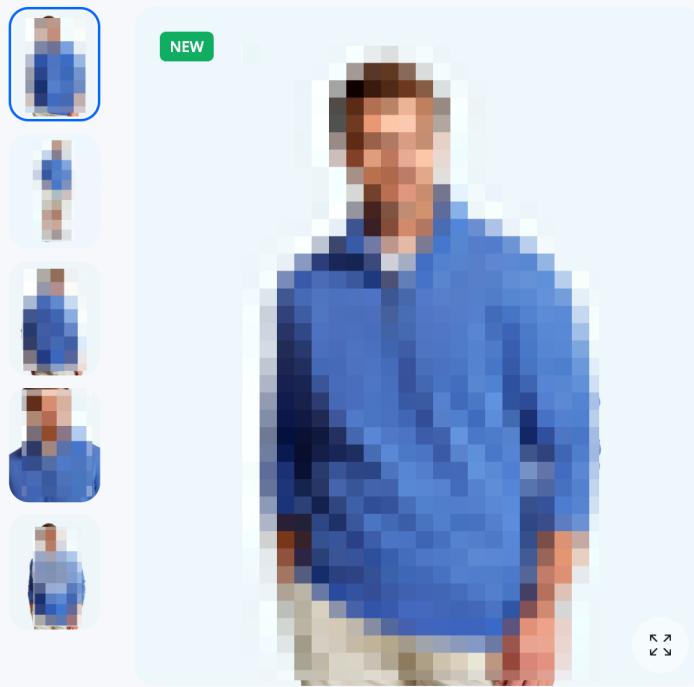

Templates are a collection of sections that are configured to give your online store a consistent look and feel.

Sections

Our theme has about **150 preset sections** (widgets) and about **20 constructor sections** with which you can create your own preset sections and use them again. That is, the template can be unrecognizably versatile from store to store.

Main product section

This section is the main one, so we will pay special attention to it here. The section consists of the left side of the media and the right side of the sortable blocks.

Frequently Bought Together new

An exclusive widget that is present in the theme so there is no longer a need to buy a monthly subscription to an expensive apps.

Advantages of our Frequently Bought Together widget (further in the text as **FBT):**

1. Four layout options on the product page: **Inner Grid**, **Inner List**, **Outer Grid 1**, **Outer Grid 2**.
2. Full synchronization with the cart, a purchased is offered after the add to cart action.
3. An advanced system for adding products from the FBT section to the cart: the ability to add both individually selected products and all at once.
4. Motivating message about a gift after adding all the products to the cart from the FBT section.
5. **Asynchronous** block - 100% passes page speed insight metrics.
6. Synced live reload widget after adding to the cart or removing from the header cart.
7. Does not offer a product from the FBT list that is already in the cart. This allows the buyer to easily keep track of what is bought from the FBT list and what is left to buy without losing focus.

Inner Grid Layout default

Demo ↗

The screenshot shows a product page for a blue padded jacket. On the left, there's a large main image of the jacket and five smaller thumbnail images below it. A green "NEW" badge is in the top right corner of the main image. To the right of the main image, there's shipping information: "Pickup available at Neuer Weg 94, 12th Floor, 45711 Datteln, Germany" and "Usually ready in 24 hours". Below that is a link to "Check availability at other stores".

Below the shipping info are several interactive buttons: "Add to wishlist" (with a heart icon), "Get FREE SHIPPING if the check amount is more than \$102.04" (with a truck icon), "Ask about this product" (with a mail icon), "Sizing guide" (with a ruler icon), "Delivery and Return" (with a delivery truck icon), and a "Share" button.

A section titled "Frequently bought together" follows, showing three recommended products:

- Satin padded jacket** (NEW): Gray / Wool / XS & S. \$29.00. Options: Pay per month (save), Add to cart.
- Black street sneakers** (SALE): 6 / Black -13% (only 1). \$65.00. Options: Add to cart.
- Rough leather wallet** (SALE): Dark Blue -32% (only today). \$42.00. Options: Add to cart.

At the bottom, there's a "Guaranteed Safe Checkout" section with payment method icons (AMEX, Apple Pay, Google Pay, Mastercard, Visa) and social media sharing icons (Instagram, Facebook, TikTok, Twitter, YouTube). A "Select All" checkbox is also present.

Enabled by default: No

Sortable product block: Yes

Widgets limit per page: 1

Asynchronous: Yes (100% passes page speed insight metrics)

Visibility: Product page info

Steps to enable

1. Special metafield **frequently_bought_together** should already be created and included in the collections. How to do this is described in the instructions below in **Steps to enable FBT** (this

information is further in the current chapter, you need to scroll down).

2. Make sure that previously created widgets are removed. The removal instructions are given in **Steps to disable FBT layout** (this information is further in the current chapter, you need to scroll down).
3. From your Shopify admin, go to **Online Store > Themes**.
4. Find the Lumia theme that you want to edit, and then click **Customize**.
5. Open the drop-down menu at the top of the page.
6. Select the **Product page** template that you want to edit from the dropdown menu.
7. Click the **Main product** section to load the content into the preview window and access the options available to you.
8. To enable FBT, click **+ Add block** and select a **Frequently bought items** block.
9. Select **Grid** in the **Style** field.
10. Sort the block if necessary.
11. Click **Save**.

Inner List Layout

Demo ↗

Steps to enable FBT

1 Create collection metafield

⚠ This first step only runs once if it hasn't been done before or metafield was deleted.

1. From your Shopify admin, go to **Settings** > [Metafields ↗](#).
2. Click **Collections**.
3. Click **Add definition**.
4. In the **Name** field, enter **frequently_bought_together**, and then select that name from the list.
5. Click **Select content type**, and then select **True or false** from the list.

6. Click **Save**.

2 Enable / disable FBT for collection

1. From your Shopify admin, go to the collection.
2. Click on the **frequently_bought_together** metafield at the bottom of the product page.
3. Set **True** to enable.
Set **False** or **Clear** value to disable.
4. Click **Save**.

Thus, each product from this collection will offer to buy its neighbors in the collection (in fact, these are related products). If a product is linked to several collections, only the first collection will be taken into account.

Advanced usage

We recommend to create special **collection-sets**. For example, a buyer buys a shirt for which it would not be bad to offer to buy other things directly related to it in color, such as a jacket, trousers, cufflinks, a tie, and so on.

1. Create a collection and its name, for example "**Men's set 1**".
2. Add there all the products clearly suitable for joint purchase.
3. Set metafield **frequently_bought_together** to **True** in this collection.

All products are now interconnected, and on each product page, other items from the current set will be suggested. Additionally, when adding items to the cart from any page in the store, related products will be offered.

This helps a lot and motivates the buyer to see the whole picture of the style and buy everything they need.

Admin interface

| Option Name | Type | Values | Default | Description |
|-------------|------|--------|---------|-------------|
|-------------|------|--------|---------|-------------|

| Option Name | Type | Values | Default | Description |

Media

Product media can include images, 3D models, and videos. Using media like 3D models for your products provides your customer with a better understanding of the function and size of an item, and increases your customers' confidence in the quality of your products.

You can add product media directly to your product pages, or by using [Metafields ↗](#). With our theme you can add references to your product Metafields through the theme editor.

Steps to add media

1. From your Shopify admin, go to [Products ↗](#).
2. Click a product to see its details page.
3. Add an image, 3D model, or video in one of the following ways:
 - Click **Add** and then select the file that you want to upload.
 - Drag and drop the file that you want to upload onto the **Media** section.
 - Click **Add media from URL**, and then enter the image URL, or video URL of the product hosted on YouTube or Vimeo.

Thumbs position

Enabled by default: No

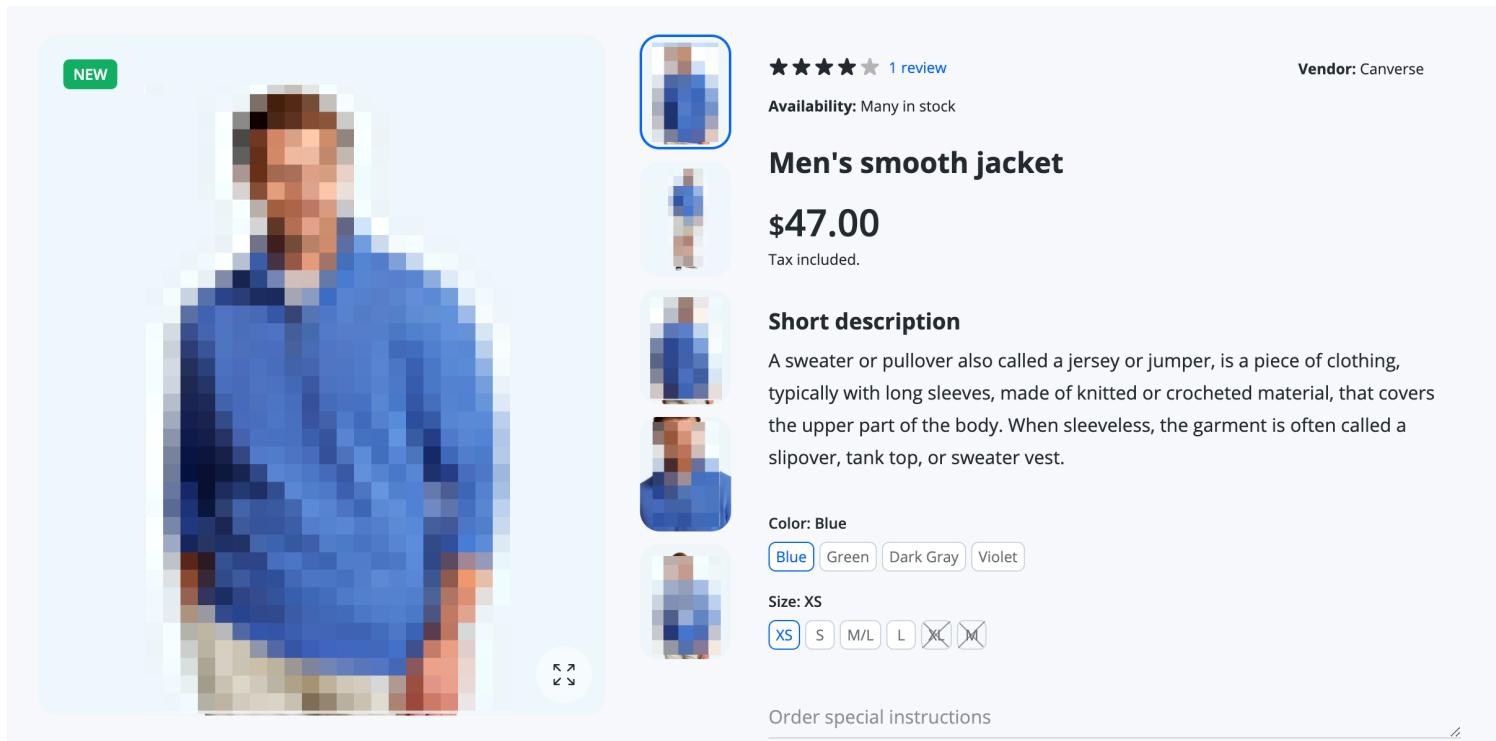

Visibility: Product page media

Steps to enable

1. From your Shopify admin, go to **Online Store > Themes**.

2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Open the drop-down menu at the top of the page.
4. Select the **Product page** template that you want to edit from the dropdown menu.
5. Click **Main product** to view its settings.
6. In the **Media** fields group select **At the bottom** from the **Thumbs position** selectbox.
7. Click **Save**.

Right

Enabled by default: No

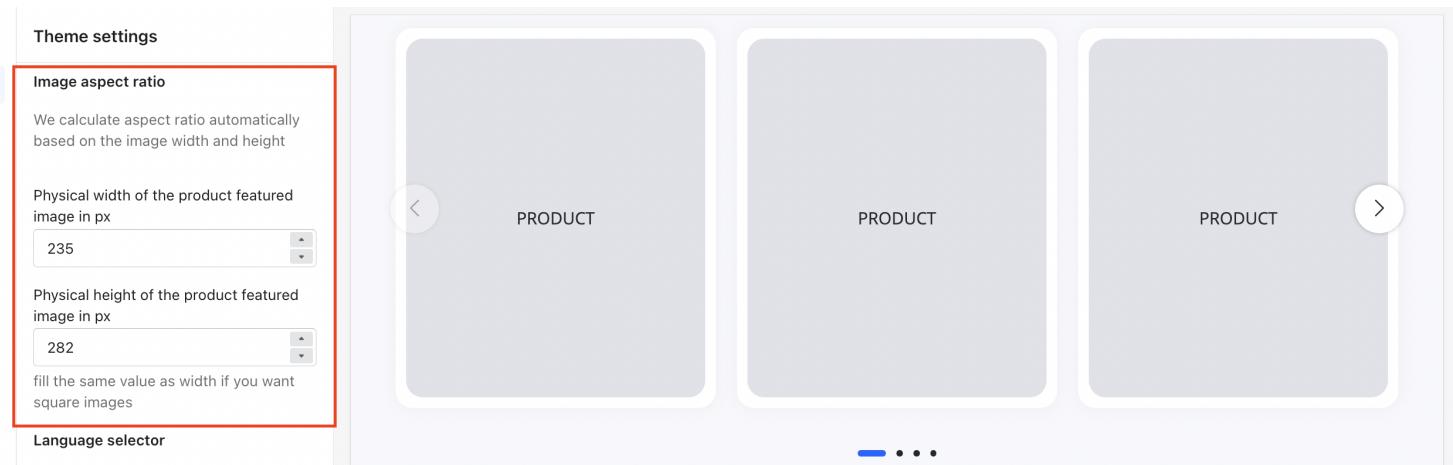

Visibility: Product page media

Steps to enable

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Open the drop-down menu at the top of the page.
4. Select the **Product page** template that you want to edit from the dropdown menu.
5. Click **Main product** to view its settings.
6. In the **Media** fields group select **On the right side** from the **Thumbs position** selectbox.
7. Click **Save**.

Aspect ratio

We calculate image aspect ratio automatically based on the image width and height and the option **Cover** is enabled by default. The default aspect ratio for the image container is 235 x 282 px. It is a global aspect ratio. That is why all product main images have the same aspect ratio.

Steps to set your own image aspect ratio.

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Click **Theme settings**.
4. Click **General**.
5. Enter value in the **Physical width of the product featured image in px** field.
6. Enter value in the **Physical height of the product featured image in px** field.
7. Click **Save**.

Admin interface

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Open the drop-down menu at the top of the page.

4. Select the **Product page** template that you want to edit from the dropdown menu.

5. Click **Main product** to view its settings.

| Option Name | Type | Values | Default | Description |
|--|----------|--|------------------|---|
| Media | | | | |
| Thumbs position | Dropdown | <ul style="list-style-type: none"> • On the left side • On the right side • At the bottom | On the left side | Position where to show the media thumbs of images, videos, 3d models |
| Cover image | Checkbox | <ul style="list-style-type: none"> • True • False | True | Very useful option to prettify the view of the image if you have images with different aspect ratio |
| Fill background color under the main product image | Dropdown | <ul style="list-style-type: none"> • None • Placeholders color from color settings • Secondary background from color settings • Background white | Background white | Colorization of the background under the main image to fill the fully image container |
| Enable video looping | Checkbox | <ul style="list-style-type: none"> • True • False | False | Video player loop once or infinite time |
| Hide unselected variants' media on the desktop | Checkbox | <ul style="list-style-type: none"> • True • False | False | Hides variant's featured images |

Popups

Along with the main product description, secondary information often follows, such as shipping information or sizing guide, and so on. It is very convenient not to show it right away otherwise it will interfere with the focus of the buyer on the main description of the product. Our template allows you to put such auxiliary information in tabs or, for example, in **popup-links**.

There are 2 types of **popup-links**:

1. Page popup
2. Ask about the product popup

Page pop-up

The screenshot shows a page pop-up for a shirt. At the top, there's a navigation bar with size options: xs, s, m, l, xl, xxl. Below that is a close button (X) and a back/forward navigation icon. The main title is "Sizing Guide". A note says "Set up an individual subtitle for each popup in the admin panel". The text below is placeholder: "Lorem ipsum dolor to you how all this mistaken idea of denouncing pleasure and praising pain idea of denouncing pleasure and praising pain idea of denouncing pleasure and praising pain was born and I will give you a complete idea of denouncing pleasure and praising pain idea of denouncing pleasure." A table provides size measurements for Mens Small, Medium, Large, X-Large, and XX-Large across five body parts: Neck, Chest, Sleeve, Waist, and Neck again. The table has a light gray background with alternating row colors. At the bottom is a blue "OKAY" button. At the very bottom of the page, there are three links: "Ask about this product", "Sizing guide" (which is highlighted with a red border), and "Delivery and Return".

| Mens | Small | Medium | Large | X-Large | XX-Large |
|--------|---------|---------|---------|---------|----------|
| Neck | 14-14.5 | 15-15.5 | 16-16.5 | 17-17.5 | 18-18.5 |
| Chest | 35-37 | 38-40 | 41-43 | 44-46 | 47-49 |
| Sleeve | 32-33 | 33-34 | 34-35 | 35-36 | 36-36.5 |
| Waist | 29-31 | 32-34 | 35-37 | 38-40 | 41-43 |
| Neck | 14-14.5 | 15-15.5 | 16-16.5 | 17-17.5 | 18-18.5 |

Enabled by default: Yes

Sortable block: Yes

Limit per page: 25

Can be individual per product?: Yes (metafields support)

Asynchronous block - 100% passes page speed insight metrics.

Visibility: Product page info

Steps to enable

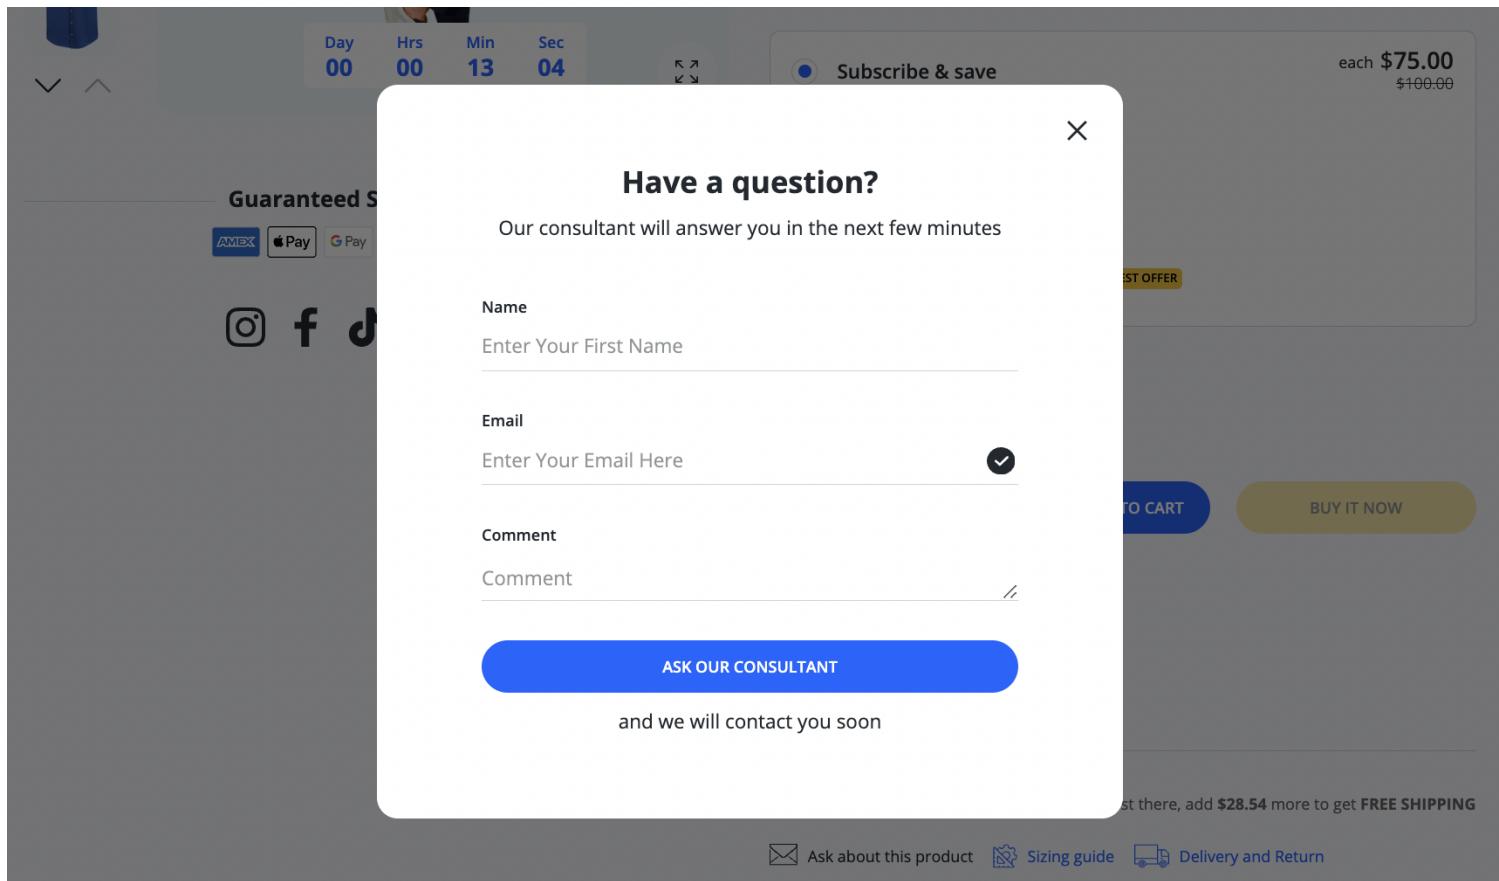

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Open the drop-down menu at the top of the page.
4. Select the **Product page** template that you want to edit from the dropdown menu.
5. Click the **Main product** section to view its settings.
6. Click **+ Add block** and select a **Pop-up** block.
7. Select page in the page browse field **Page**.
8. Enter the **Pop-up label** field.
9. Enter the **Subtitle** field (Optional).
10. Select icon in the **Preset Icon** dropdown.
11. Click **Save**.

Admin interface

| Pop-up label | Text | | Ask about this product | Pop-up label (supports metafields)/product/product-page/sticky-add-to-cart/ |

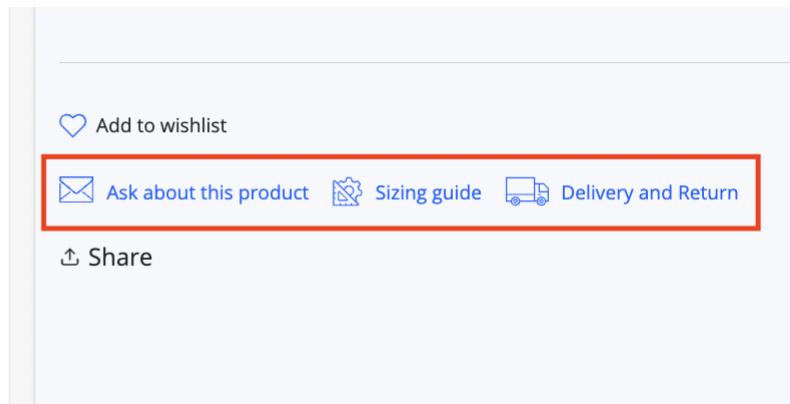

Layout

There are two types of layouts and both are automatic: **One in a row** and **All in a row**.

All in a row

If you sort popups in the admin panel so that they go one after another, then they will be combined into a group-row.

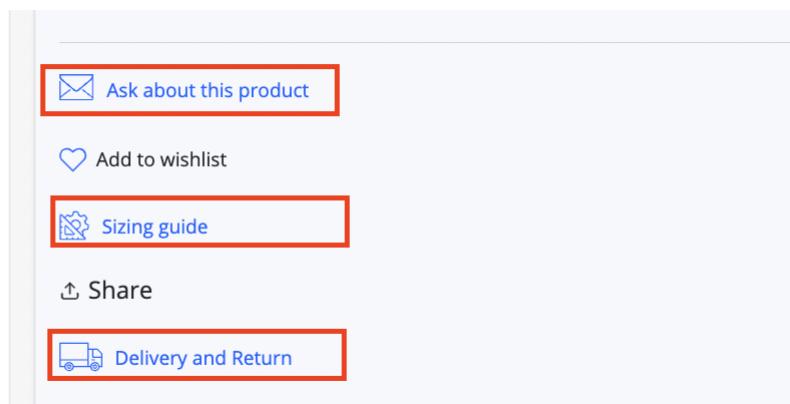

- Wishlist + Free shipping
- Ask about this product
- Sizing guide
- Delivery and Return
- Share
- Frequently bought items
- Description
- Reviews

One in a row

If popups are sorted so that they are not neighbors, then popups will be individually in a row.

- Ask about this product
- Wishlist + Free shipping
- Sizing guide
- Share
- Delivery and Return
- Frequently bought items
- Description
- Reviews

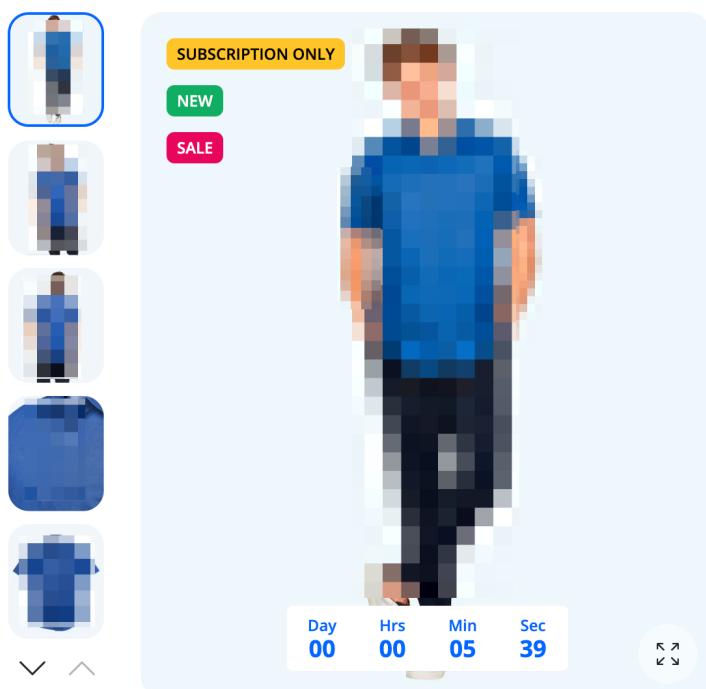

Tabs

Themes usually support either inner or outer tab layout. Our theme supports both inner and external tab layout. Tabs are easy to create and they are sortable. Lumia supports up to 25 tabs per page.

There are 5 tab types:

1. **Apps** (collects the content of all apps that are included as separate blocks for the product)
2. **Description** (main product description)
3. **Metafield** (individual content per product, [read more about metafields ↗](#))
4. **Page** (content from regular pages, [read more about pages ↗](#))
5. **Text** (simple text from the textarea field)

Inner Tabs

Previous Next Product

Prev Next is a popular solution as an auxiliary navigation for products in the same category. We have placed this navigation in the upper right corner.

Enabled by default: Yes

Visibility: Product page top right corner

Steps to enable / disable

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Click **Theme settings**.
4. Click **Breadcrumbs**.
5. Check the **Product** checkbox.
6. To enable prev next, check the **Prev Next products** checkbox.
To enable prev next, uncheck the **Prev Next products** checkbox.
7. Click **Save**.

i The **previous next** are only enabled if there is a collection in the product link. We have designed the theme so that the products in all widgets are displayed with the first collection in which the product is bound.

Recommendation logic

The recommendation algorithm predicts the most relevant products based on the product a customer is interacting with. The criteria that the algorithm uses depends on the recommendation intent and a merchant's online store. In general, it might take into account the following factors:

- **Purchase history** - Finds products that have historically been purchased together.
- **Product description** - Finds products with similar descriptions.
- **Related collections** - Finds products from collections that the current product is part of, excluding collections with handles all and frontpage.

Steps to enable

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Click **Theme settings**.
4. Click **Product page**.
5. To enable carousel layout, uncheck the **Infinite scroll** checkbox.
6. Click **Save**.

- Products that are out of stock or set to a price of 0, gift cards, and products in the visitor's cart aren't included in recommendations.
- You can't customize the recommendation algorithm to exclude specific products. However, you can choose which of the returned - products to show with JavaScript

Related Products

A distinctive feature of the theme is the functionality of the product page. By default, the original product page widget is only Recommended Products. Our theme has a much wider selection of widgets and one of them is Related Products. The peculiarity of the widget is that it displays all products from the category to which the main product belongs. The widget has two output layouts, a carousel with a limited number of products and a product grid that loads products in an endless mode on a down-scroll event. It is very convenient for a user who is looking for a product from a given category and there is no need to click back in the browser to return to a category from a product. And thus, the user's focus in the category is not lost.

Sticky Add To Cart

The sticky add to cart is made to make it easier for a potential buyer to focus on the product description without losing sight of the buy button.

This is not the original Shopify theme option. It is made in many themes.

Advantages of our sticky add to cart:

1. Support adding subscription to the cart.
2. Support adding additional product fields to the cart (additional product fields are used to create more complex configurable products that have more than three options, in **Product / Additional Product Fields** we have described in detail how to use our self-written additional fields generator for Lumia theme).
3. The main variant options selector is fully synchronized symmetrically with the options in the sticky add to cart. This means that if you chose red color and XS size, then exactly the same size and color will be selected in the sticky add to cart, the product photo will be changed both there and there. It works in one direction and the other.
4. Product variant options as pills, default dropdowns or information block (when there are no product variants).
5. **Asynchronous** block - 100% passes page speed insight metrics.

 The desktop and mobile versions have an interface for closing the sticky add to cart if it annoys or blocks the desired content. The user can easily do this.

Templates

Online Store 2.0 introduced the concept of **template**. Templates are a collection of sections that are configured to give your online store a consistent look and feel. In the theme editor, you can discover which templates are applied to which pages, and then edit them to customize the information displayed to your customers.

 More info about templates you can read in [official documentation ↗](#).

We have sketched in the administration page, in our opinion, the 4 most necessary product page templates. One of them is the **Default** template for all products, the rest must be applied manually in products.

Default product template default

[Check out demo ↗](#)

Distinctive features: Thumbnails on the left, first content element is rating, outer tabs, inner FBT style Grid

Enabled by default: Yes

Sortable product blocks: Yes

Sortable product sections: Yes

Sections limit per page: No limit

Apply template to a product

1. From your Shopify admin, go to [Products ↗](#).
2. Use the search filter to locate the product that you want to change, or click on the product from the list of existing products.
3. In the **Online store** section, use the dropdown menu to select a **Default product** to apply template to the selected product.

4. Click **Save**.

Product-2 template

[Check out demo ↗](#)

Distinctive features: Thumbnails at bottom, inner tabs closed

Enabled by default: No

Sortable product blocks: Yes

Sortable product sections: Yes

Sections limit per page: No limit

Apply template to a product

1. From your Shopify admin, go to [Products ↗](#).
2. Use the search filter to locate the product that you want to change, or click on the product from the list of existing products.
3. In the **Online store** section, use the dropdown menu to select a **product-2** to apply template to the selected product.
4. Click **Save**.

Product-3 template

[Check out demo ↗](#)

Distinctive features: First content element is a product name, product options are separated by a decorative line to focus attention, inner tabs opened, outer FBT style Grid 2

Enabled by default: No

Sortable product blocks: Yes

Sortable product sections: Yes

Sections limit per page: No limit

Apply template to a product

1. From your Shopify admin, go to [Products ↗](#).
2. Use the search filter to locate the product that you want to change, or click on the product from the list of existing products.
3. In the **Online store** section, use the dropdown menu to select a **product-3** to apply to the selected product.
4. Click **Save**.

Product-minimal template

[Check out demo ↗](#)

Distinctive features: The price is not indicated immediately, the minimum number of blocks, outer tabs, outer FBT style Grid **Enabled by default:** No

Sortable product blocks: Yes

Sortable product sections: Yes

Sections limit per page: No limit

Apply template to a product

1. From your Shopify admin, go to [Products ↗](#).
2. Use the search filter to locate the product that you want to change, or click on the product from the list of existing products.
3. In the **Online store** section, use the dropdown menu to select a **product-minimal** to apply template to the selected product.
4. Click **Save**.

Create your own template

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the theme that you want to edit, and then click **Customize**.
3. Open the drop-down menu at the top of the page.

4. Use the dropdown menu to select a **Products** . Click **+ Create template**.
5. Give your template a unique name.
6. Using the dropdown menu, select on which existing template you want to base your new template.
7. Click **Create template**.

 Any changes you make to a template will impact all pages that use that template. If you want to display some pages of that type differently, then you can create a new template based on one that already exists in your theme. Creating a new template from an existing template automatically populates your new template with the same sections, which you can then edit to remove, add, or hide sections as needed without impacting the display of other templates of that type.

3D & Variants Ready new

About 3D model

From the shopify [documentation ↗](#):

3D models are virtual representations of an object or surface in three dimensions. They let you view the object from any angle. You can get 3D models of products or create your own by using 3D modeling software. 3D models can help merchants tell a story about their product and let customers see a product in action or visualize it in their own space.

- [Learn how to create 3D models for products ↗](#)
- [Learn how merchants request 3D models ↗](#)

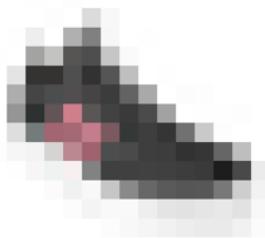

Meanwhile, the original mechanism of 3D models in shopify is not synchronized with the product variants. The 3D model only allows you to look at the 3D model and rotate it in different directions by changing the scale as an independent object in the media gallery of the product. But what if you want to change, for example, the color of the model on the fly by clicking on the color option?

Fine! Our theme makes it possible. A live example of how it works can be seen [at the link ↗](#).

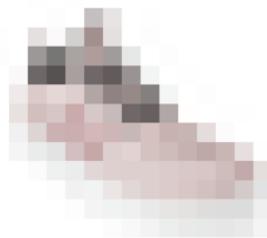

Steps to enable

1 Prepare 3D model (information for 3D designer)

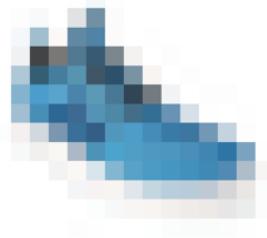

In the world of e-commerce, many products come with different options or variants. For example, when shopping online, a brand of shoe might have an image representing each color and material option

Street

Beach

Midnight

Images representing different product variants.

With the release of the [glTF™ ↗ KHR_materials_variants ↗](#) extension designed by the Khronos® [3D Commerce™ ↗](#) Working Group, multiple asset variants that share the same geometry can now be combined into a single glTF asset - enabling an optimal end-to-end experience for supporting multiple product variants in 3D Commerce use cases!

```
{
  "name": "Shoe_laces",
  "extensions": {
    "KHR_materials_variants": {
      "mappings": [
        {
          "material": 0,
          "variants": [0, 1]
        },
        {
          "material": 1,
          "variants": [2]
        }
      ]
    }
  }
}
```

Describing different materials for a 3D model in a glTF file.

To support a product variant experience through this extension, a viewer simply needs to switch between materials in the glTF file when a different variant is selected, reusing the single set of asset geometry.

The use of the glTF materials variants extension which allows multiple materials and textures to be packed with a single geometry in a GLB. Our API exposes these variant names as **availableVariants** and you can select one using the **variantName** attribute.

Thus, the main purpose final that 3D model that will be uploaded into the shopify had traced options for materials. With `<model-viewer>` object theme is able to change attribute

variantName by clicking the variant.

2 Upload 3D model to product media

- From your Shopify admin, go to **Products**.
- Click on a product to see its details page.
- Add 3D model in one of the following ways:
 1. Click **Add** and then select the file that you want to upload.
 2. Drag and drop the file that you want to upload onto the **Media** section.
 3. Click **Add media from URL**.

3 Create product metafield

 This third step only runs once if it hasn't been done before or metafield was deleted.

1. From your Shopify admin, go to **Settings > Metafields ↗**.
2. Click **Products**.
3. Click **Add definition**.
4. In the **Name** field, enter **model_with_variants**, and then select that name from the list.
5. Click **Select content type**, and then select **JSON** from the list.
6. Click **Save**.

4 Bind 3D model and variants using metafield

After the metafiled is created and 3D model is uploaded into the product, it remains to associate the IDs of the product variants with 3D model attributes. The relationship between IDs and attributes needs to be written in json format. An example from our demo is shown below.

```

[
  [
    40381705158753, /* product variant id */
    "midnight" /* 3D model variantName attribute */
  ],
  [
    40381705191521,
    "beach"
  ],
  [
    40381705224289,
    "street"
  ],
  [
    40381705322593,
    "midnight"
  ],
  [
    40381705355361,
    "street"
  ],
  [
    40381705453665,
    "midnight"
  ],
  [
    40381705486433,
    "beach"
  ],
  [
    40381705519201,
    "street"
  ]
]
/*....other variants goes here....*/
]

```

1. From your Shopify admin, go to the product with 3D model.
2. Click on the **model_with_variants** metafield, write your own json data into the product metafield.
3. Click **Save**.

Additional Product Options new

Often there is a lack of additional static information about the product when ordering it. For example, you want to know what caption the buyer wants to print on the front and back of T-Shirt or what words to engrave on wedding rings, whether it is necessary to contact the client to confirm a small order, and whether it is possible to write the client to the mailing list after the order.

Do not call back, I'm sure of the order

BUY IT NOW

I agree to the store policies

You won't be able to do such a form by default. Especially for this case, we wrote an exclusive [additional product options generator ↗](#) for our theme.

Steps to generate the form above for a product individually

1 Create product metafield

 This first step only runs once if it hasn't been done before or metafield was deleted.

1. From your Shopify admin, go to **Settings** > [Metafields ↗](#).
2. Click **Products**.
3. Click **Add definition**.
4. In the **Name** field, enter **product_line_properties**, and then select that name from the list.
5. Click **Select content type**, and then select **Multi-line text** from the list.
6. Click **Save**.

2 Open form generator

1. Open [additional product options generator ↗](#).

3 Add checkbox option **Do not call back, I'm sure of the order**

1. In the fields group **Input Settings** click **Add** button in the **Checkbox** row.
2. In the fields group **Edit Settings** click **Edit** in the **Checkbox Label** row.
3. Remove **Checkbox Label** and write **Do not call back, I'm sure of the order** in the **Label** field.

4 Add input option **Front print caption**

1. In the fields group **Input Settings** click **Add** button in the **Text** row.
2. In the fields group **Edit Settings** click **Edit** in the **Text Heading** row.
3. Remove **Text Heading** and write **Front print caption** in the **Label** field.

5 Add input option **Back print caption**

1. In the fields group **Input Settings** click **Add** button in the **Text** row.
2. In the fields group **Edit Settings** click **Edit** in the **Text Heading** row.
3. Remove **Text Heading** and write **Back print caption** in the *Label* field.

6 Add input option **Send email notifications about updates**

1. In the fields group **Input Settings** click **Add** button in the **Select** row.
2. In the fields group **Edit Settings** click **Edit** in the **Select Heading** row.
3. Remove **Select Heading** and write **Send email notifications about updates** in the **Label** field.
4. Add values **Yes** and **No**.
5. Set value **No** as default.

```

7

Copy generated html and paste in product metafield

1. In the fields group **HTML code (only copy)** Click **Copy**.
2. From your Shopify admin, go to [Products ↗](#).
3. Click on a product to see its details page.
4. Click on the **product_line_properties** metafield at the bottom of the product page.
5. Paste generated html.
6. Click **Save**.

The screenshot shows a product form generator interface. At the top, there's a header with 'Metafields' and a 'PRODUCT' section. Below this, a 'short_description' field is selected. To the right of the field, there's a 'Show all' link and a 'Clear' button. A large text area contains the generated JSON code for the form fields. At the bottom of the screen, there are buttons for 'Archive product', 'Delete product', and 'Save'.

```

<div class="form-group"><fieldset class="d-flex custom-form"><label class="form-check-label">
<input type="checkbox" name="properties[Do not call back, I'm sure of the order]" class="form-check-input"> Do not call back, I'm sure of the order</label></fieldset></div><div class="form-group"><label class="form-label">Front print caption</label><div class="form-control-wrap">
<input type="text" name="properties[Front print caption]" class="form-control form-control-rounded" required></div></div><div class="form-group"><label class="form-label">Back print caption</label><div class="form-control-wrap">
<input type="text" name="properties[Back print caption]" class="form-control form-control-rounded" required></div></div><div class="form-group"><label class="form-label">Send email notifications about updates</label><div class="form-control-wrap form-control-wrap--select"><select name="properties[Send email notifications about updates]" class="form-select form-control form-control-rounded"><option value="Yes">Yes</option><option value="No" selected="selected">No</option></select></div>

```

i Our forms generator uses localstorage. That means that the form that you are generating is saved in the browser memory at once. Even if you close your browser tab or turn off your computer, the last state of your form is still kept in memory.

How to create a form back in the generator based on the previously saved html?

Let's say you make different forms for different products and you don't want to rebuild the forms every time in the generator to change just one parameter.

This is exactly what the section **JSON code (edit & copy)** is for. If you plan to edit the form in the future, we recommend saving it.

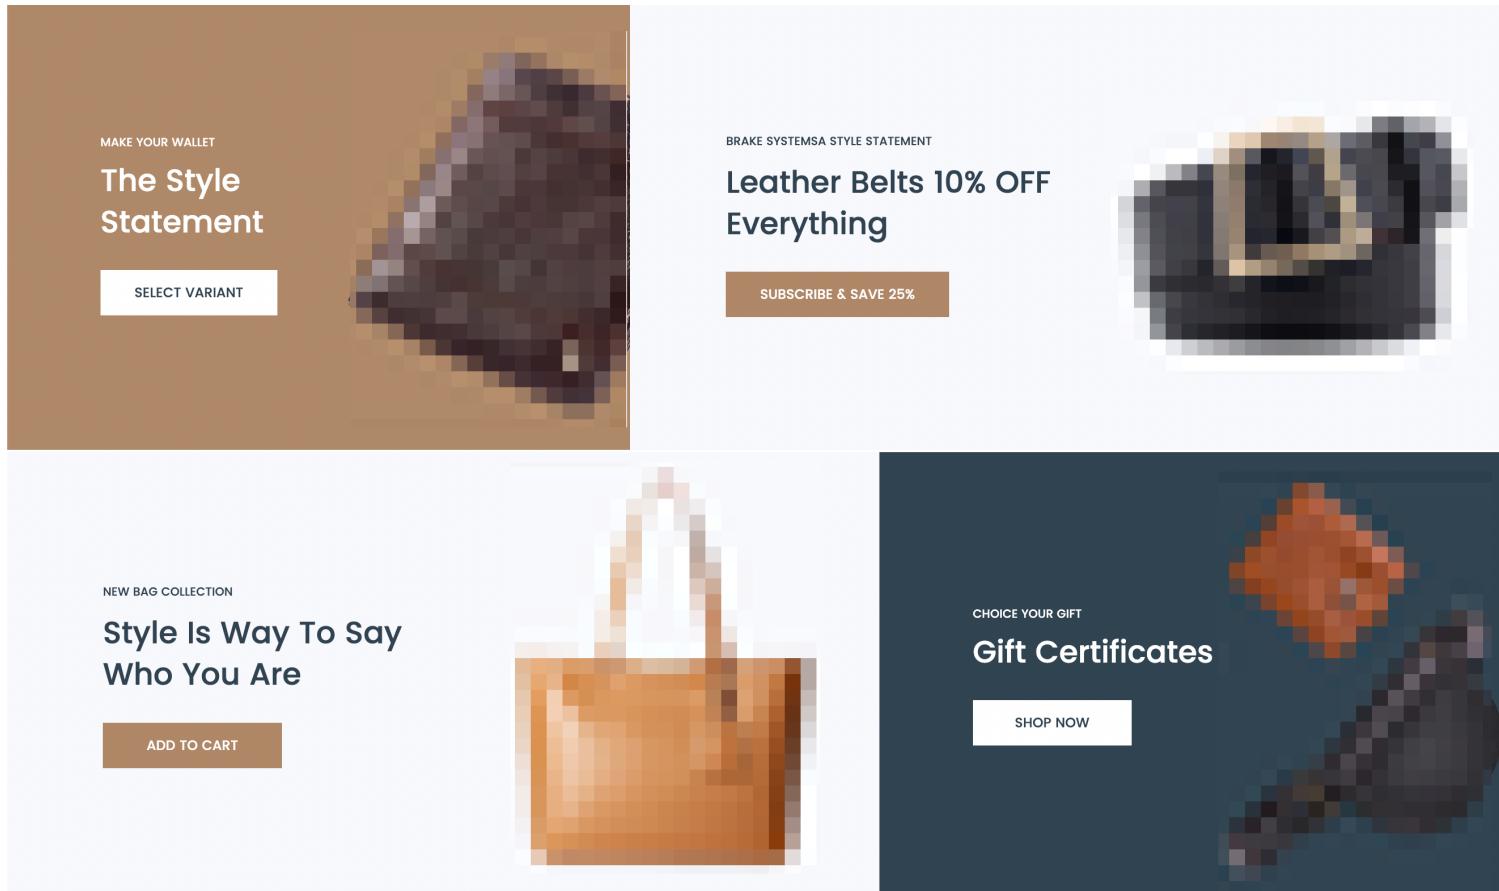

In the fields group **JSON code (edit & copy)** click **Copy**. Save this code anywhere on your side for future re-use.

If you paste the code back in that area **JSON code (edit & copy)** and click **Apply Changes** then the form will be reverted for editing.

Banner-Product new

Demo ↗

https://lumia-theme.com/?_ab=0&_fd=0&_sc=1&preview_theme_id=122262356065

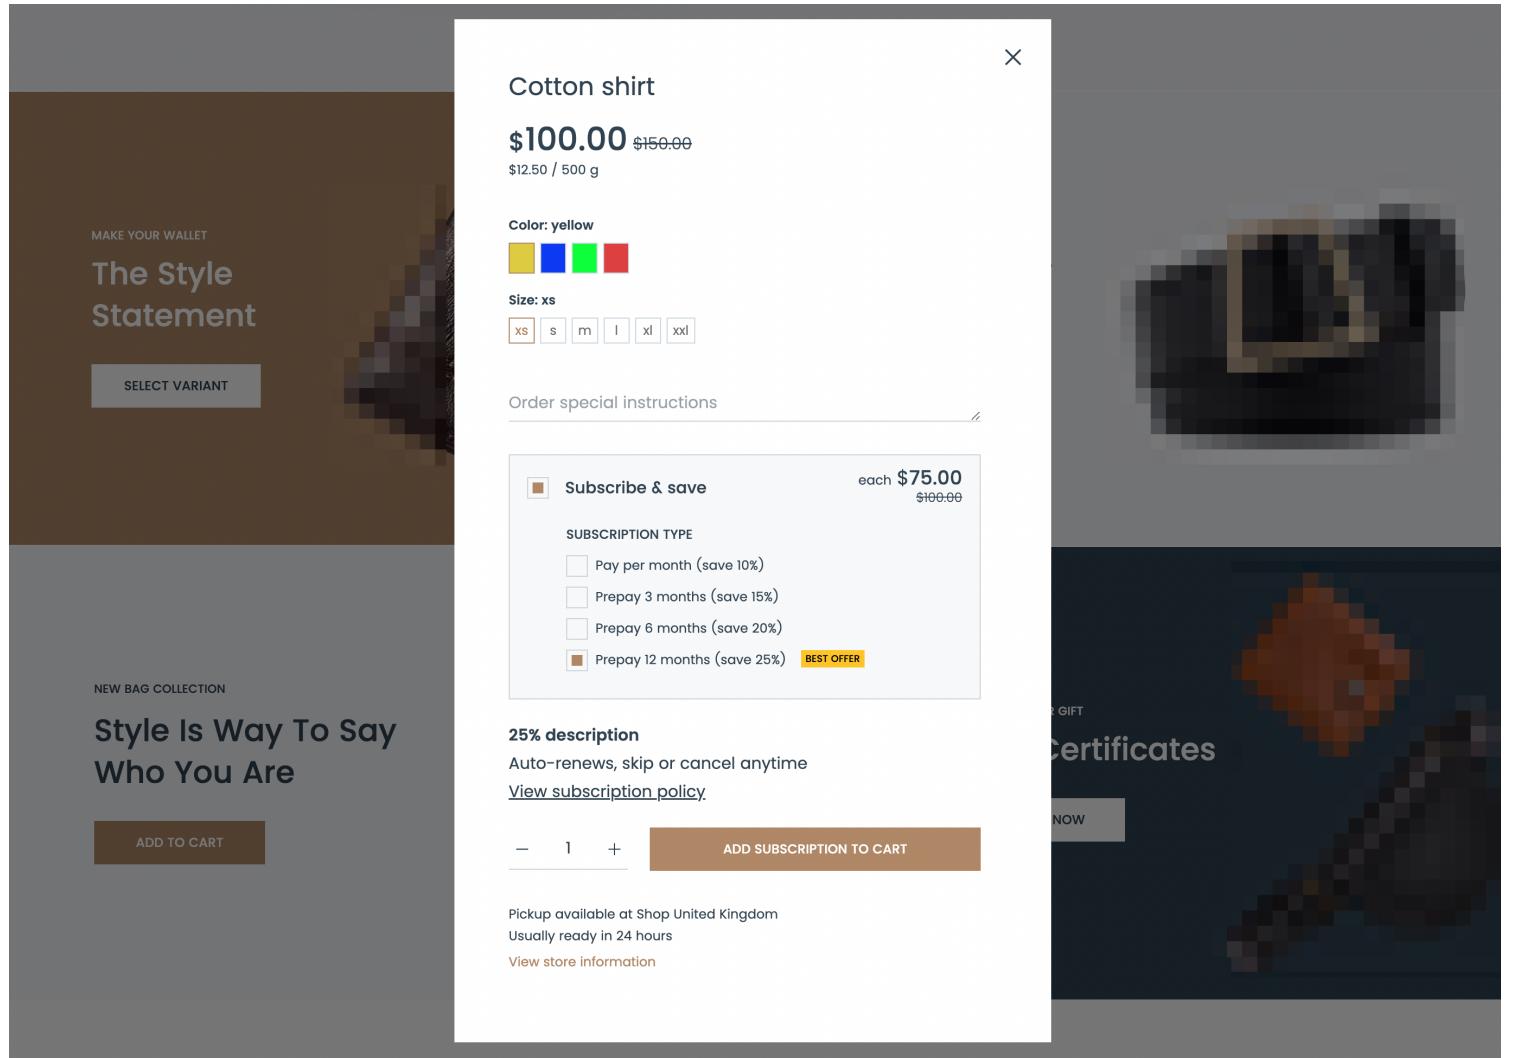

Action buttons

Our new theme feature is the ability to create radically different styles of banners linked to the product. That is, not just a static link to the product using the **Read More** or **More Details** button, which is most often found in other themes, but a complete synchronization of the banner and the product.

Thus, buttons can be attached to banners:

- **Add To Cart** adds the product directly to the cart asynchronously.
- **Select Variants** opens the Quick Shop Popup to select product variants.
- **Subscribe & Save** opens the Quick Shop Popup to select product options and subscription plans.
- **Shop Now** sends to the product page

Quick Shop Popup

i Each banner from the banners constructor supports product linking. There is no need to manually set what type of button to show. The Lumia theme itself checks if the product has subscription plans and product variants.

Binding a product to a static banner

Consider the example of creating a banner from the start in our theme.

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Select a template from the drop-down menu.
4. Click **+ Add section**, and use the Search bar to search for a **Banners /**.
5. Select any banners preset.
6. Select any block in the created section.
7. Go to block settings and select product in the **Banner link** field.
8. Click the **Enable fast shop** checkbox.
9. Click the **Button** checkbox if it's unchecked.

Banner interface

Banner link 

Enable fast shop
Only if the link is a product. Banner button has to be enabled.

Looped Countdown new

A common practice in stores is to use sales accelerators such as pop-up banners for promotions, recently purchased products, and **countdown counters**.

Product card

Product page

About counter

Most often, you could come across themes where you need to set the end date in the format `MM/DD/YYYY` or `DD/MM/YYYY`. In this case, you need to keep track of the dates because when the countdown ends, you need to re-set the end date of the discount if you want to continue counter.

This method is not very convenient because of the constantly repeated work. Our theme offers a more convenient option - repeatable time cycles.

A product can be assigned a countdown counter with one of 6 time intervals:

1. 30min
2. Hour
3. Day
4. Week
5. Month
6. Year

Principle of counter: it automatically continues from the beginning after completion by the end of the selected time interval.

Enabled by default: No

Visibility: Product page, Product cards, Quick View

Steps to enable

1 Create product metafield

 This first step only runs once if it hasn't been done before or metafield was deleted.

1. From your Shopify admin, go to **Settings > Metafields ↗**.
2. Click **Products**.
3. Click **Add definition**.
4. In the **Name** field, enter **countdown**, and then select that name from the list.
5. In the **Description** field, enter **Enter code 1-6 (1 is 30min, 2 is a hour, 3 is a day, 4 is a week, 5 is a month, 6 is a year)**.
6. Click **Select content type**, and then select **Integer** from the list.
7. In the **Minimum value** field, enter **1**.
8. In the **Maximum value** field, enter **6**.
9. Click **Save**.

2 Select a timer option for product

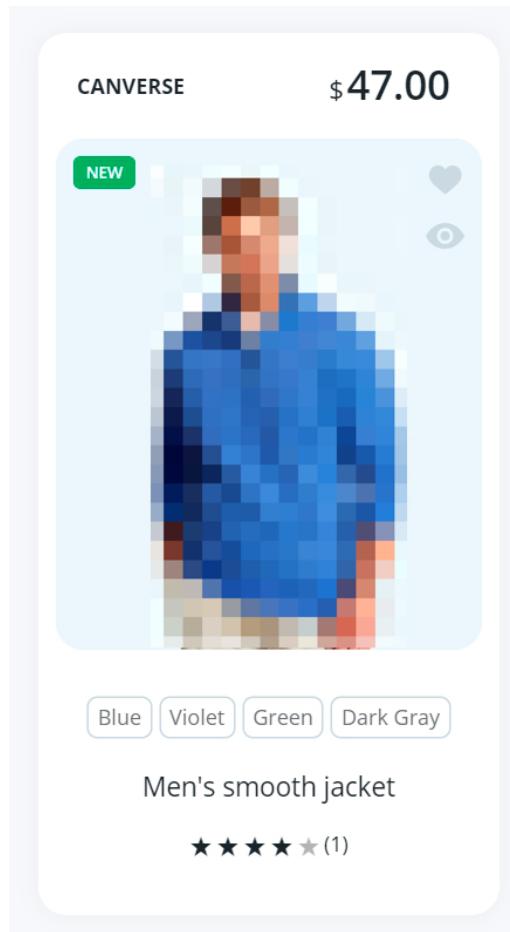

1. From your Shopify admin, go to [Products](#).
2. Click on a product to see its details page.
3. Click on the **countdown** metafield at the bottom of the product page.
4. Enter code 1-6 (**1** is 30min, **2** is a hour, **3** is a day, **4** is a week, **5** is a month, **6** is a year).
5. Click **Save**.

 The counter can be set for the product globally (there will be a single counter for all variants at once) and for each variant separately.

Product Badges

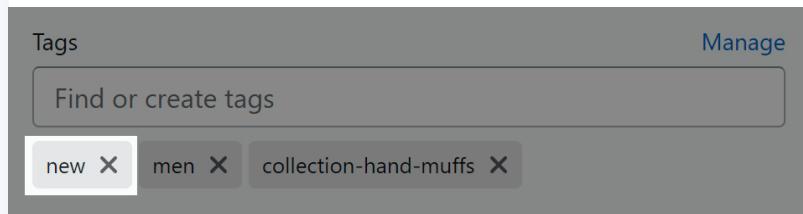

Product labels, also known as product badges, are good approach to draw attention to some products in a store. For example, a **New** badge might be added to highlight brand-new products. To draw an attention your to discounted products you could add a **Sale** badge. So, the most appealing products in your store can be easily found by customers, increasing the likelihood that they'll buy them.

New badge

Steps to enable

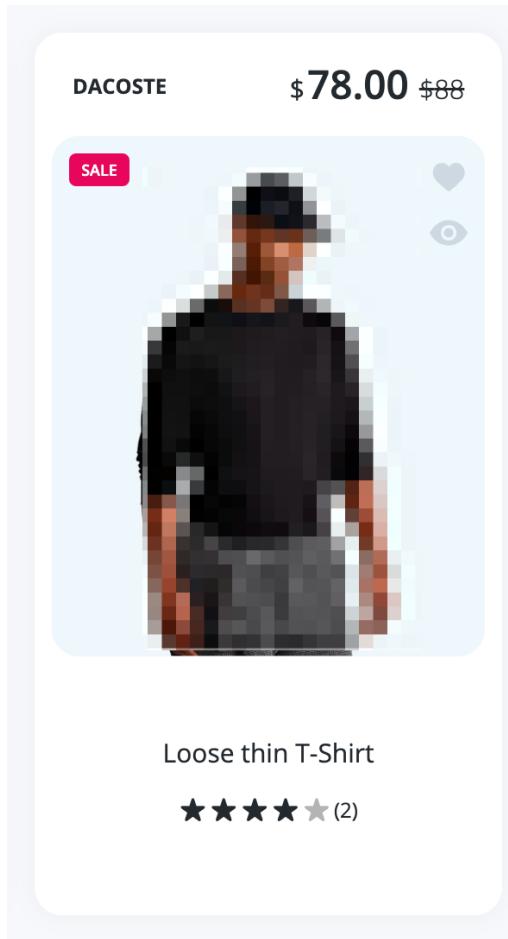

This label is automatically added for all products that have the **new** tag.

Follow these steps to add a tag:

1. Open the specific product in Shopify.
2. In the Tags section, enter tag **new**, or select it from the list of existing tags.
3. Click Save.

Sale badge

Steps to enable

This label is automatically added for all products that have the sale price.

Pricing

Price

\$ 17.00

Compare-at price

\$ 37.00

If you need to set sale prices for the product, follow the steps how to [set a compare at price for a product ↗](#) in the official documentation.

Enabled by default: Yes (Assigned automatically to all sales)

Visibility: Product carousel sections, product grid sections, collection page grid and collection page sections, product page sections.

i Sale badge is only applicable to products that have a discount price set (compare at price greater than regular).

Assign automatically to all sales

1. From your Shopify admin, go to **Online Store > Themes**.

2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Click **Theme settings**.
4. Click **Product badges**.
5. Check **Show sale** checkbox.
6. Select **Auto assignment to all sales** from the **Show sale badge method** radio-buttons.
7. Click **Save**.

Assign manually individually per product

1 Create a metafield

 This first step only runs once if it hasn't been done before or metafield was deleted.

1. From your Shopify admin, go to **Settings > Metafields ↗**.
2. Click **Products**.
3. Click **Add definition**.
4. In the **Name** field, enter **badge_sale**, and then select that name from the list.
5. Click **Select content type**, and then select **True or false** from the list.
6. Click **Save**.

2 Enable individual mode in theme settings

 This second step only runs once if the option had not been set before.

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Click **Theme settings**.
4. Click **Product badges**.
5. Check **Show sale** checkbox.
6. Select **Individually** from the **Show sale badge method** radio-buttons.
7. Click **Save**.

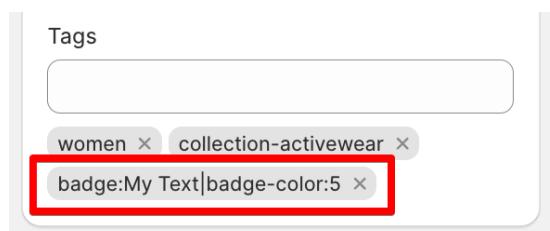

3 Set display for specific products

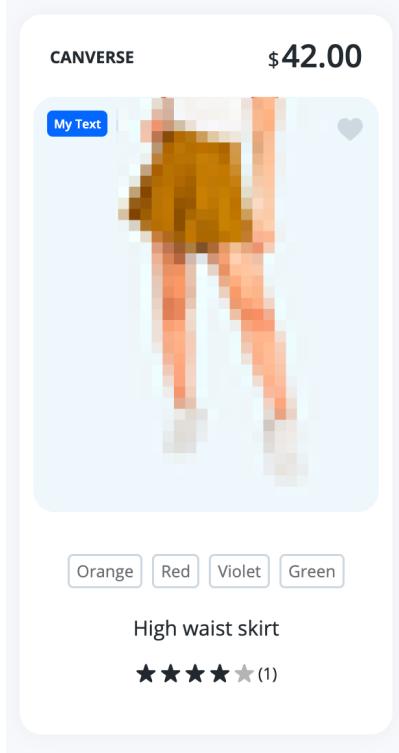

1. From your Shopify admin, go to [Products](#).
2. Click a product to see its details page.
3. Click on the **badge_sale** metafield at the bottom of the product page.
4. Select **True** to enable or **False** or **Clear** to disable.
5. Click **Save**.

Custom badge

Steps to enable

A custom badge allows you to add a unique, important short description that will make the product stand out from other products.

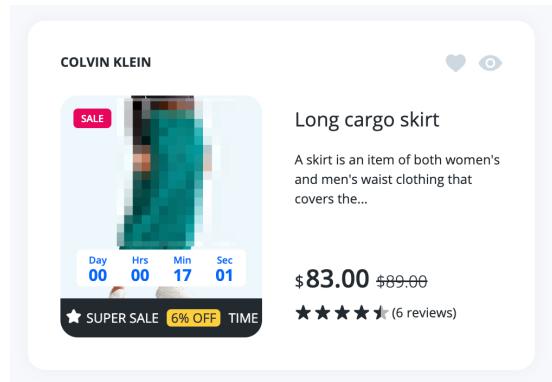

Follow these steps to add a tag:

1. Open the specific product in Shopify.
2. In the Tags section, enter tag
badge:My Text|badge-color:5, where 5 is a color number. Available colors are **0-6**. You can check them in Theme Settings / Colors - Badges. **0** is always gray.
3. Click Save.

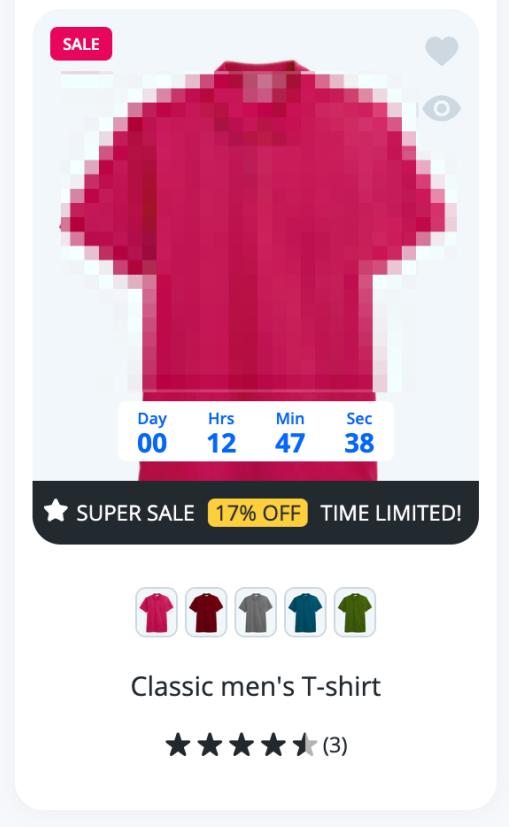

Sale ticker

A unique feature of our theme is the ticker line both in the product card and on the main product page. Enabled by default for all discounted products to attract the attention of buyers.

Horizontal card

CABIAN \$39.00 \$47

Modern card

Enabled by default: Yes (Assigned automatically to all sales)

Visibility: Product carousel sections, product grid sections, collection page grid and collection page sections, product page sections.

i The ticker is only applicable to products that have a discount price set (compare at price greater than regular).

Assign automatically to all sales

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Click **Theme settings**.
4. Click **Product badges**.
5. Check **Show sale ticker** checkbox.
6. Select **Auto assignment to all sales** from the **Show sale ticker method** radio-buttons.

7. Click **Save**.

Assign manually individually per product

1 Create a metafield

 This first step only runs once if it hasn't been done before or metafield was deleted.

1. From your Shopify admin, go to **Settings > Metafields ↗**.
2. Click **Products**.
3. Click **Add definition**.
4. In the **Name** field, enter **badge_sale_ticker**, and then select that name from the list.
5. Click **Select content type**, and then select **True or false** from the list.
6. Click **Save**.

2 Enable individual mode in theme settings

 This second step only runs once if the option had not been set before.

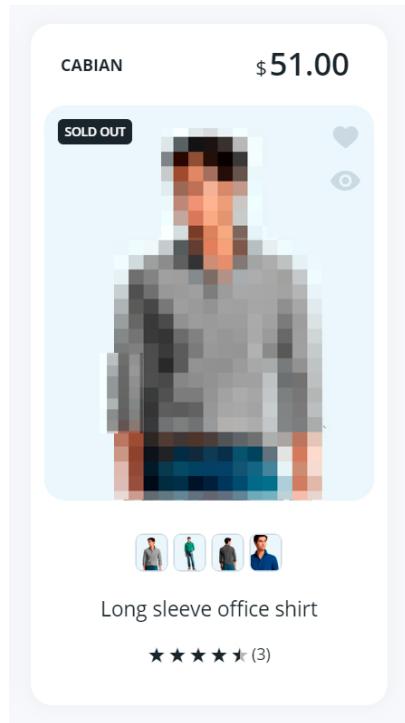

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Click **Theme settings**.
4. Click **Product badges**.
5. Check **Show sale ticker** checkbox.
6. Select **Individually** from the **Show sale ticker method** radio-buttons.
7. Click **Save**.

3 Set display for specific products

1. From your Shopify admin, go to **Products ↗**.
2. Click a product to see its details page.
3. Click on the **badge_sale_ticker** metafield at the bottom of the product page.
4. Select **True** to enable or **False** or **Clear** to disable.

5. Click **Save**.

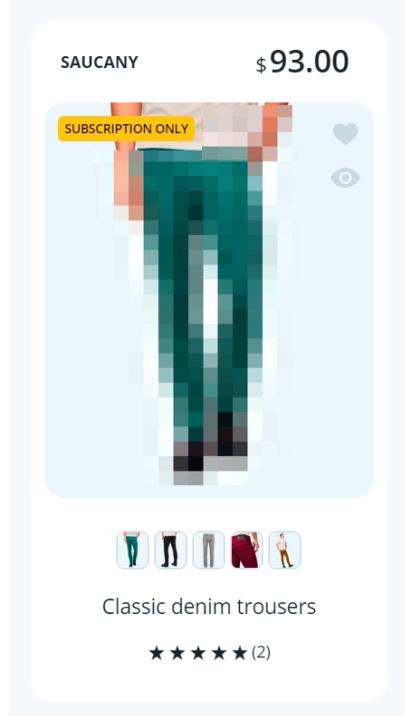

Out of stock badge

Steps to enable

This label is automatically added for all products that don't have quantities available at any location.

Only subscription badge

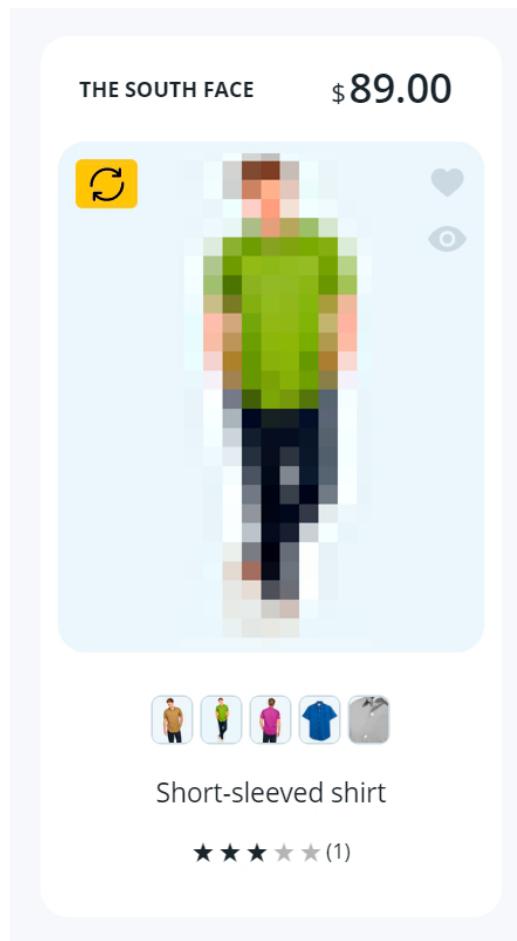

Steps to enable

This label is automatically added for all products that have **Subscribe & Save** purchase options and selected option **Only show this product with these purchase options**.

How to add **Subscribe & Save** purchase options in **Subscriptions**.

Auto-renews badge

Steps to enable

This label is automatically added for all products that have **Subscribe & Save** purchase options.

The interface shows purchase options for a product. At the top right are "Add purchase option ▾", "Remove", and "Manage". Below is a section for "Subscribe & save" with a blue icon. A list of options includes:

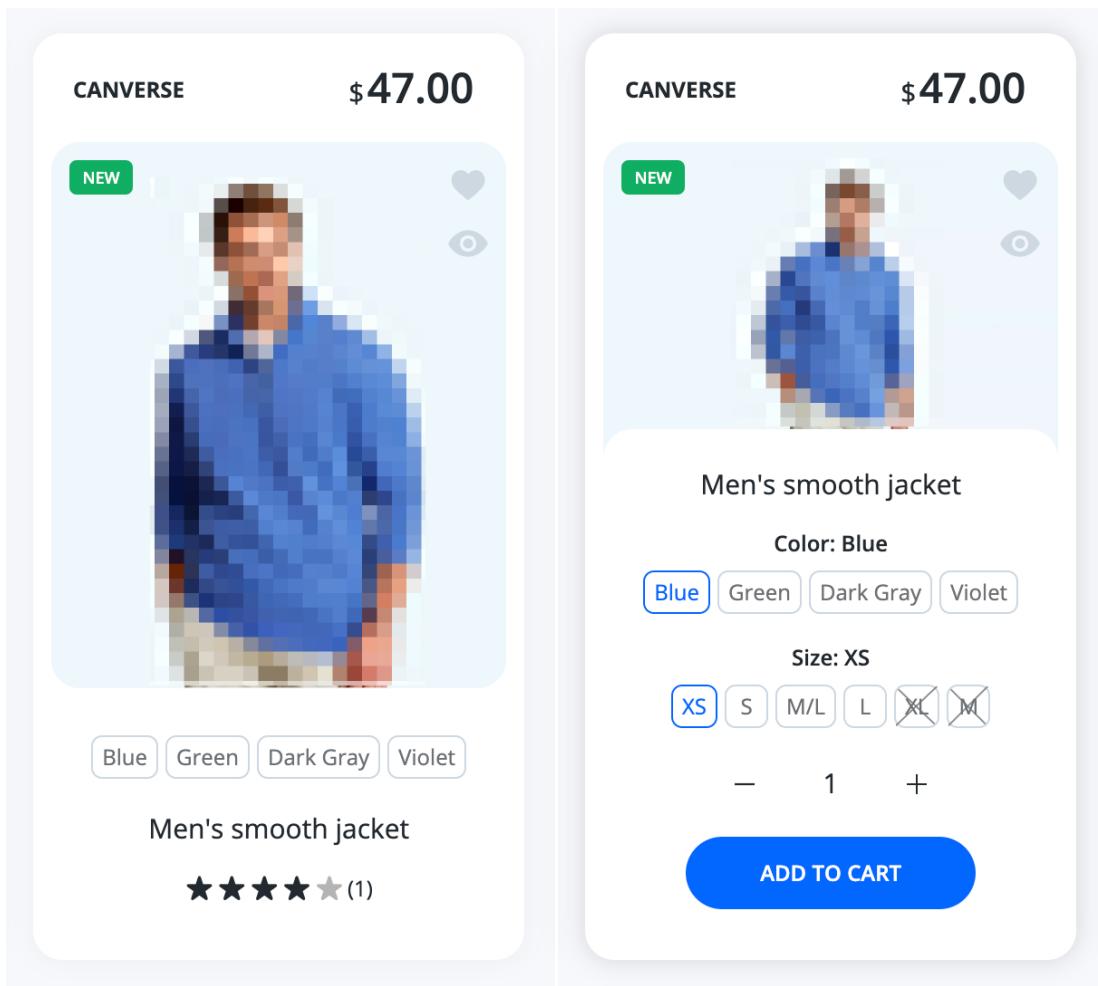

- Pay per month (save 10%)
- Prepay 3 months (save 15%)
- Prepay 6 months (save 20%)
- and 1 other delivery frequency

At the bottom is a checkbox labeled "Only show this product with these purchase options".

How to add **Subscribe & Save** purchase options in **Subscriptions**.

Main Cards

Our fresh look at the product card that we use as the main one in our demo for its novelty, balance and compactness. [Check it out on the live demo ↗](#).

Enabled by default: Yes

Visibility: Product carousel sections, product grid sections, collection page grid and collection page sections, product page sections.

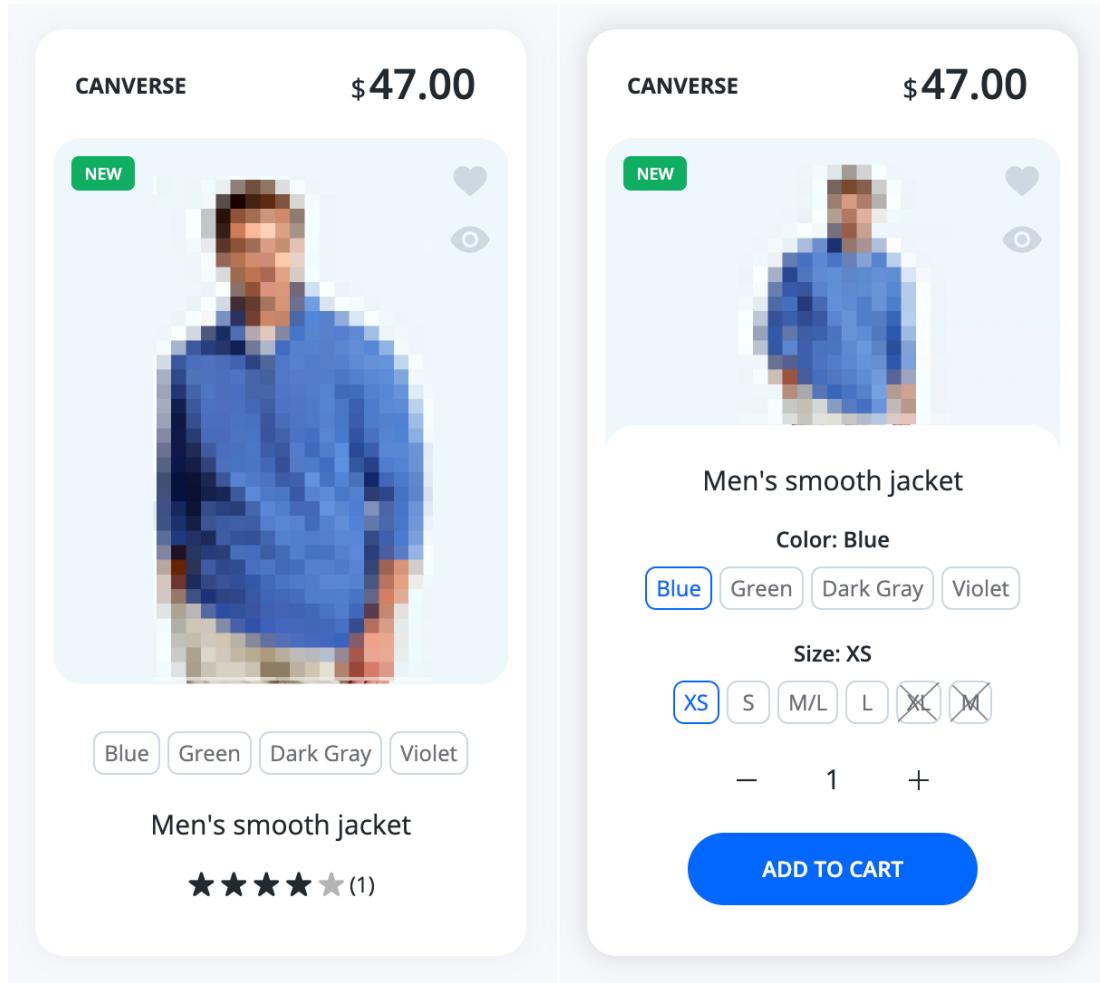

Steps to enable

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Click **Theme settings**.
4. Click **Product card**.
5. Select **Modern** from the **Layout** dropdown.
6. Click **Save**.

States

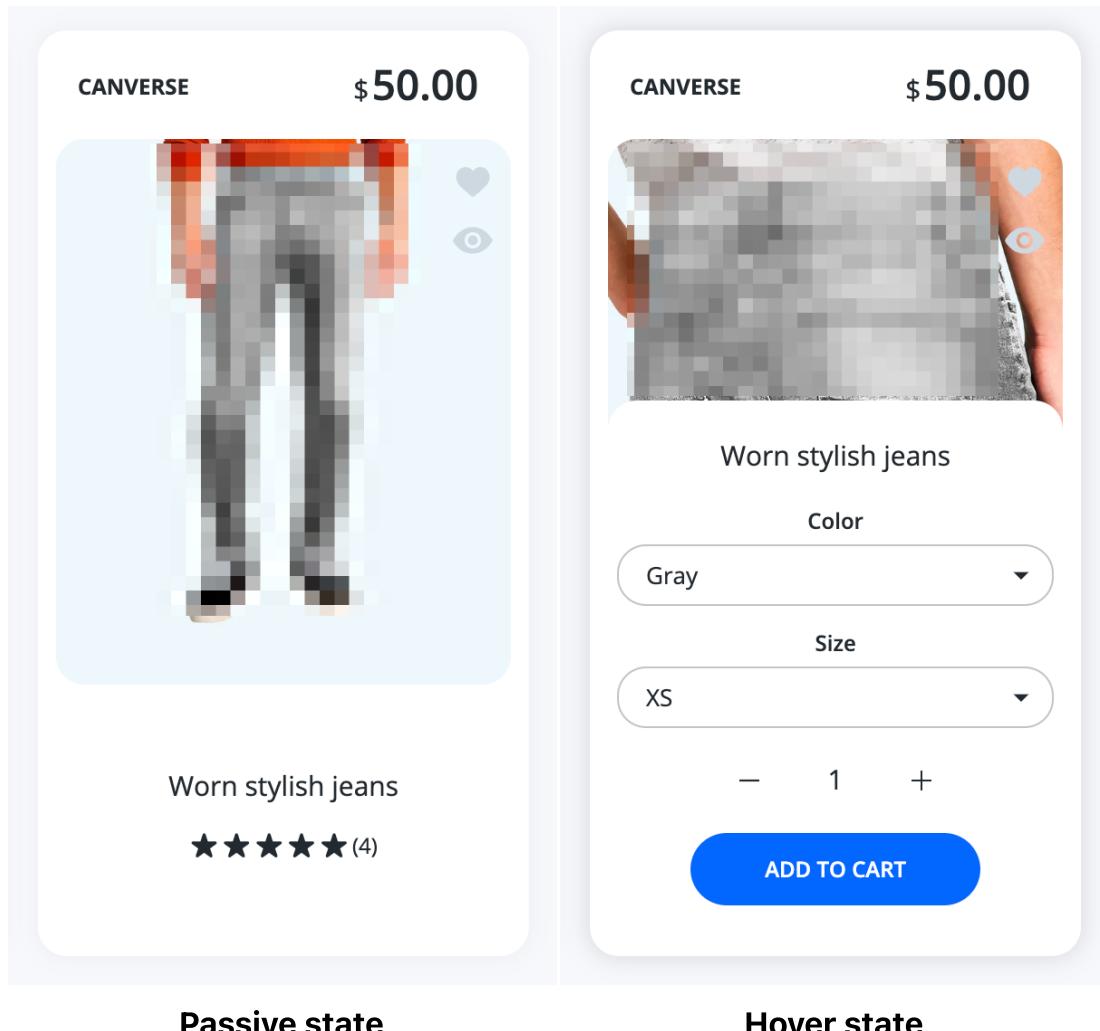

The state is an automatic type of card depending individually on the product itself that you create in the store control panel and the product card settings that you configure in our theme.

No Options

Enabled by default: Auto

Dropdown options

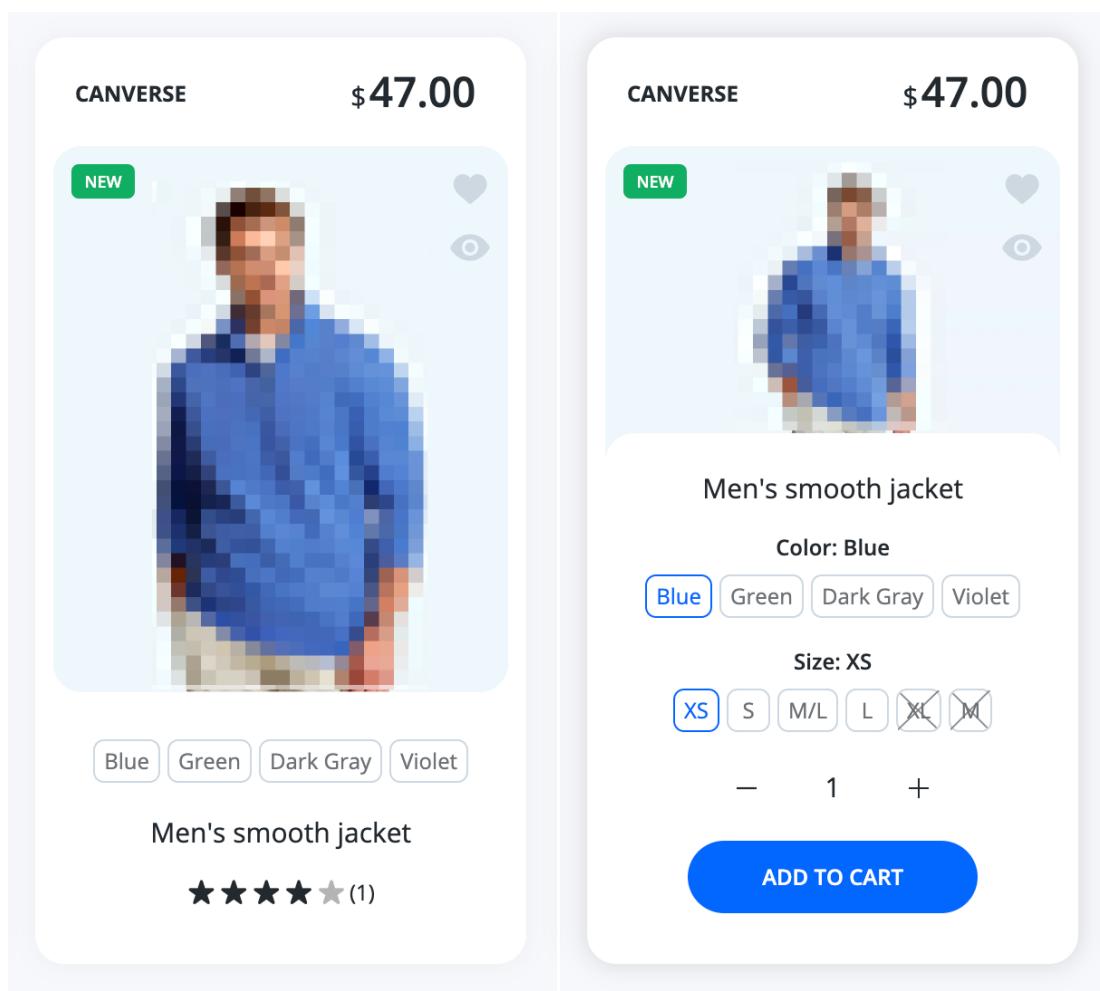

Enabled by default: No / Auto (**auto** means that if the product has many options, then the dropdown mode will be forced)

```
// Below is a theme LIQUID code for those who want to re-customize the AUTO mode logic
// Path of file snippets/variant_picker.liquid
// ...
if product.options.size == 1 and product.variants.size > 10
  assign picker_type = 'dropdown'
elseif product.options.size == 2 and product.variants.size > 36
  assign picker_type = 'dropdown'
elseif product.options.size == 3 and product.variants.size > 100 or layout == 'product-sticky'
  assign picker_type = 'dropdown'
endif
// ...
```

Steps to enable

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Click **Theme settings**.
4. Click **Product card**.
5. Select **Dropdown** from the **Variant picker > Type** selectbox.
6. Click **Save**.

Pics options

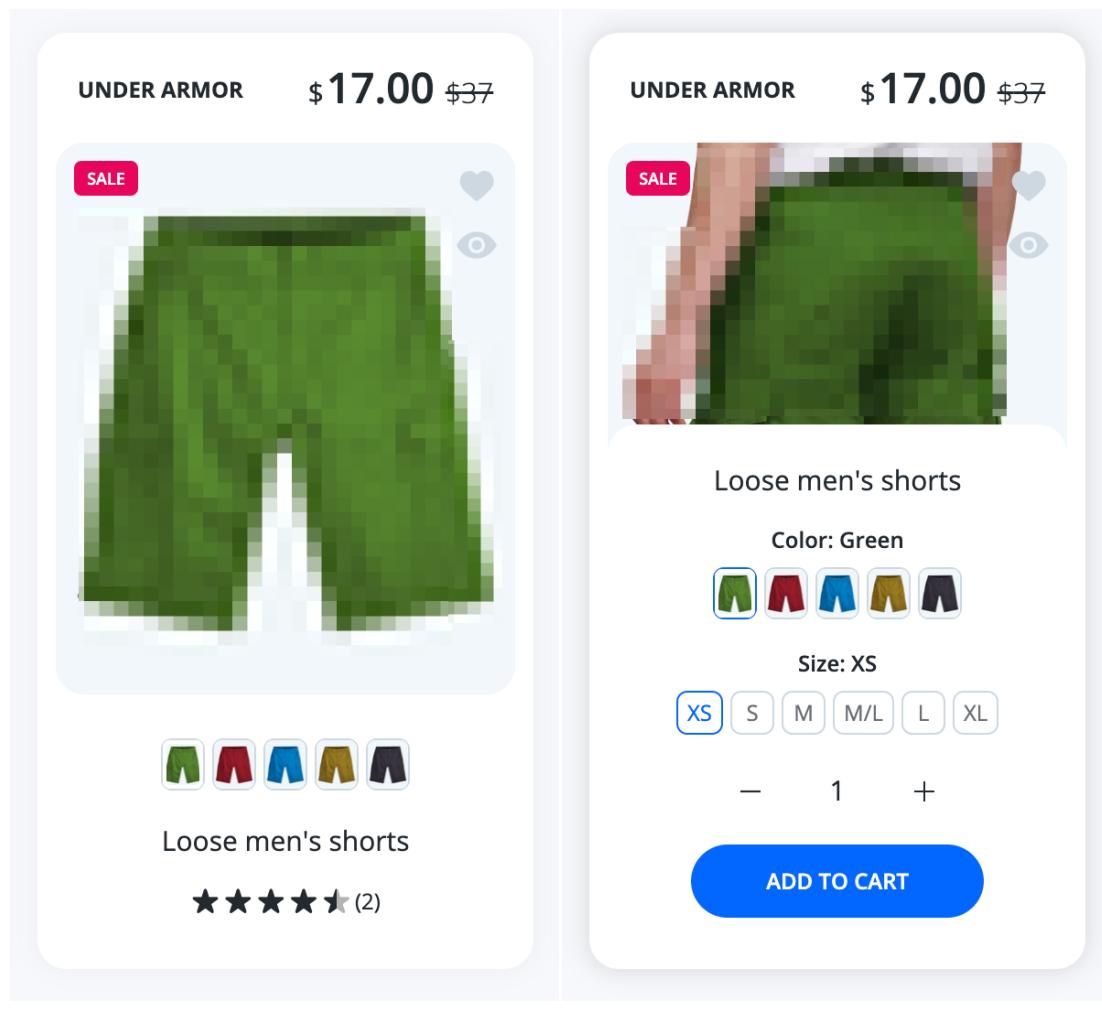

Enabled by default: No

Steps to enable

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Click **Theme settings**.
4. Click **Product card**.
5. In the **Variant picker** fields group select **Pills** from the **Type** selectbox.
6. In the **Variant picker** fields group check the **Use pics** checkbox.
7. In the **Variant picker** fields group uncheck the **Use featured variants images for 'Color' option** checkbox.
8. Click **Save**.
9. Upload pics as described in **Product Page / Product Options / Pics**

Variant's featured image options

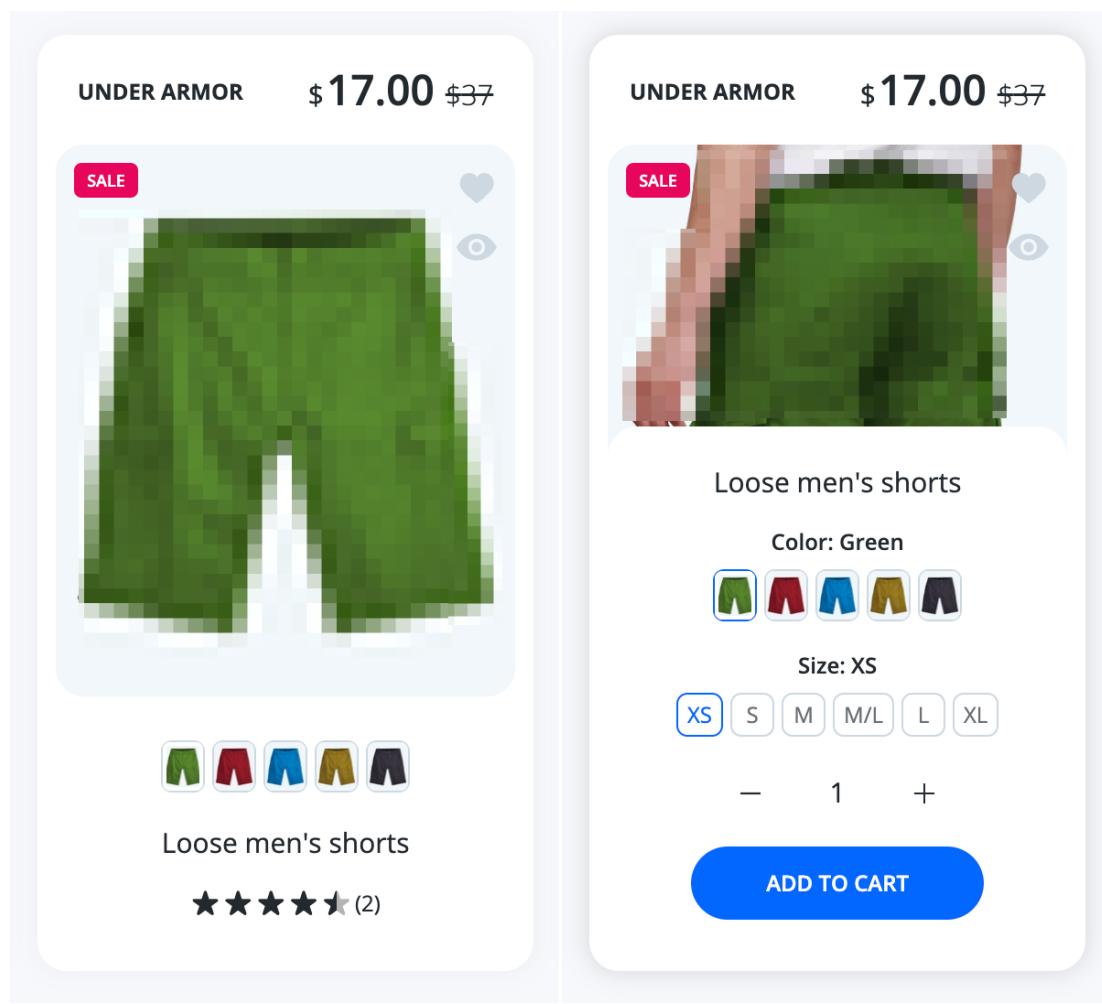

Enabled by default: No

Steps to enable

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Click **Theme settings**.
4. Click **Product card**.

Dropdowns

Enabled by default: No (inherits regular product card settings)

Card aspect ratio

In tech support, the most common question used to be how to align all the cards to one another. For example, one card has two lines in the product name / the other has one, or one product has options,

but the second does not. In our topic an equivalent height for all product cards in the same group is implemented.

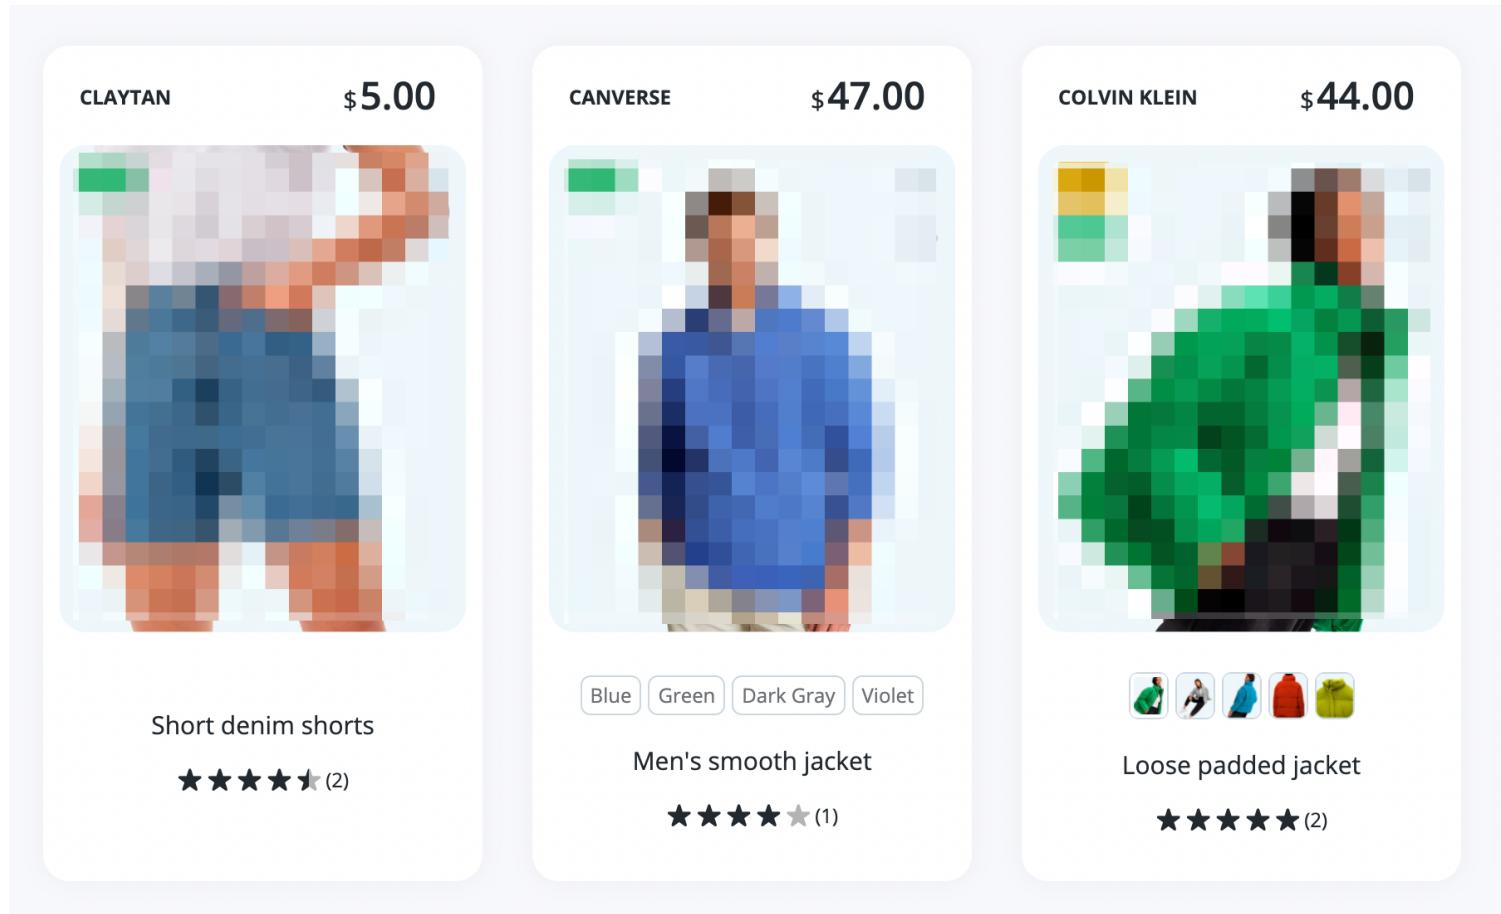

Image aspect ratio

We calculate image aspect ratio automatically based on the image width and height and option **Cover** is enabled by default. The default aspect ratio for the image container is 235 x 282 px. It is a global aspect ratio. That is why all product cards have the same image sizes.

The screenshot shows the theme settings interface with the 'Image aspect ratio' section highlighted by a red box. The section contains the following information:

- We calculate aspect ratio automatically based on the image width and height
- Physical width of the product featured image in px: 235
- Physical height of the product featured image in px: 282
- fill the same value as width if you want square images

To the right, there is a preview area showing three product cards labeled "PRODUCT".

Steps to set your own image aspect ratio.

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Click **Theme settings**.
4. Click **General**.
5. Enter value in the **Physical width of the product featured image in px** field.
6. Enter value in the **Physical height of the product featured image in px** field.
7. Click **Save**.

Product Options

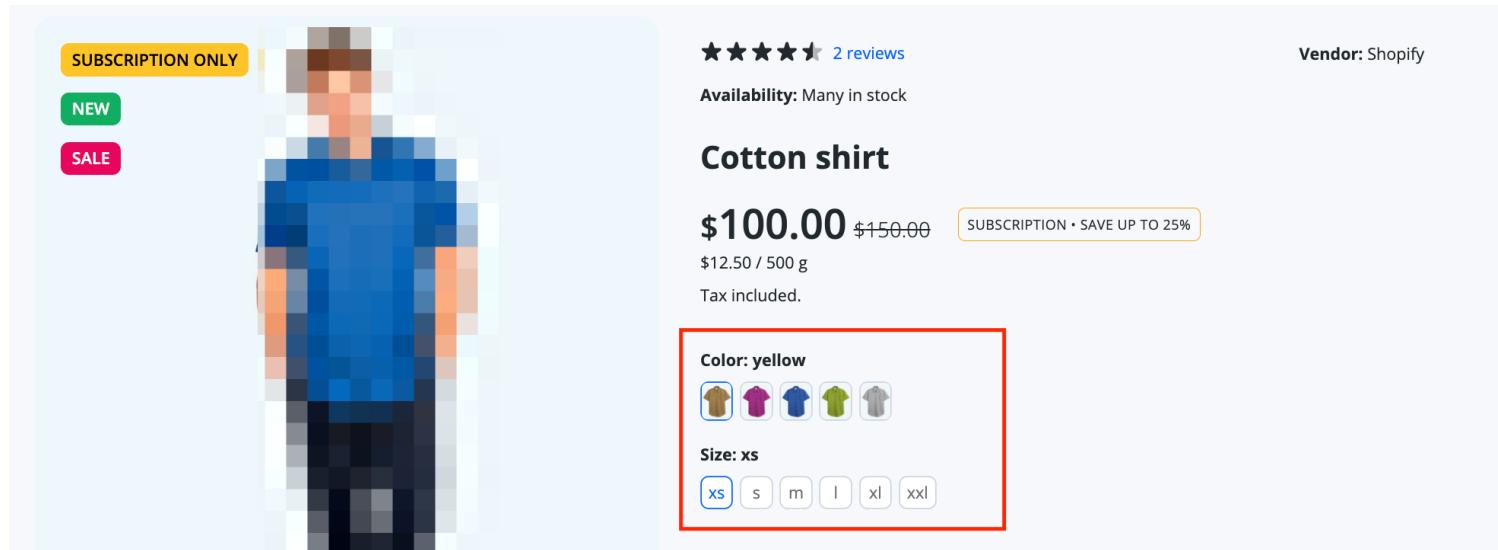

You add variants to a product that comes in more than one option, such as size or color. Each combination of option values for a product can be a variant for that product.

For example, suppose that you sell T-shirts with two options: size and color. The size option has three values: small, medium, and large. The color option has two values: blue and green. One specific variant from these options is a small, blue T-shirt. Read official documentation [how to add variants ↗](#).

Standard options from default themes show settings as dropdowns or pills with text option values. Our theme has extended the default script and is able to show separately uploaded pictures (futher **pics**) instead of text pills.

Pills default

Variant's featured image

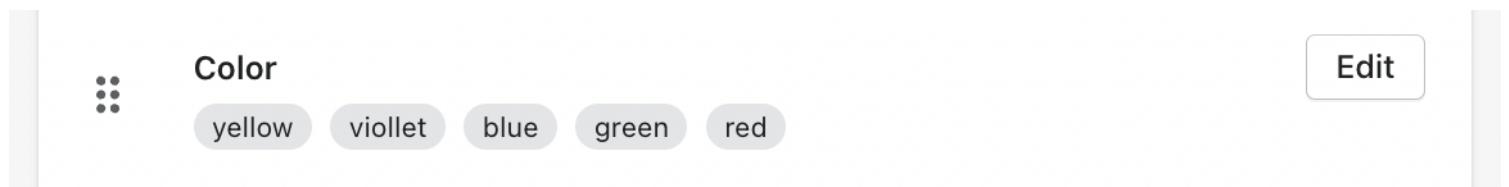

Enabled by default: No

Sortable block: Yes

Visibility: Product page info

Feature is only available for one 1 out of 3 possible options in the product. We preset in the theme that this option is **Color**.

If you have a multilingual store, then you need to check if there is a translation of the word **Color** in **Themes Settings > Product options > Color option name** field. This field has already contained comma-separated translations into 21 languages. If your variant is not there, then you must definitely add it at the end, separated by comma.

i You can display variant images not necessarily in the **Color** option, but in whatever you want. Just change the word **Color** to the name of your option where you want to display variant images.

Steps to enable

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Open the drop-down menu at the top of the page.
4. Select the **Product page** template that you want to edit from the dropdown menu.
5. Click the **Main product** section to view its settings.
6. **Edit** existing block **Variant picker** or Click **+ Add block** and select a **Variant picker** block.
7. In the **General** fields group select **Pills** from the **Type** selectbox.
8. In the **General** fields group check **Use featured variants images for 'Color' option** checkbox.
9. Click **Save**.

Add an image to a new variant

1. From your Shopify admin, go to [**Products ↗**](#).
2. Click the name of the product that you want to edit.
3. In the **Variants** section, click **Add variant**.
4. While creating the variant, click **Add image** on the variant details page.

5. Select a product image or click **Add file** to add a new image.

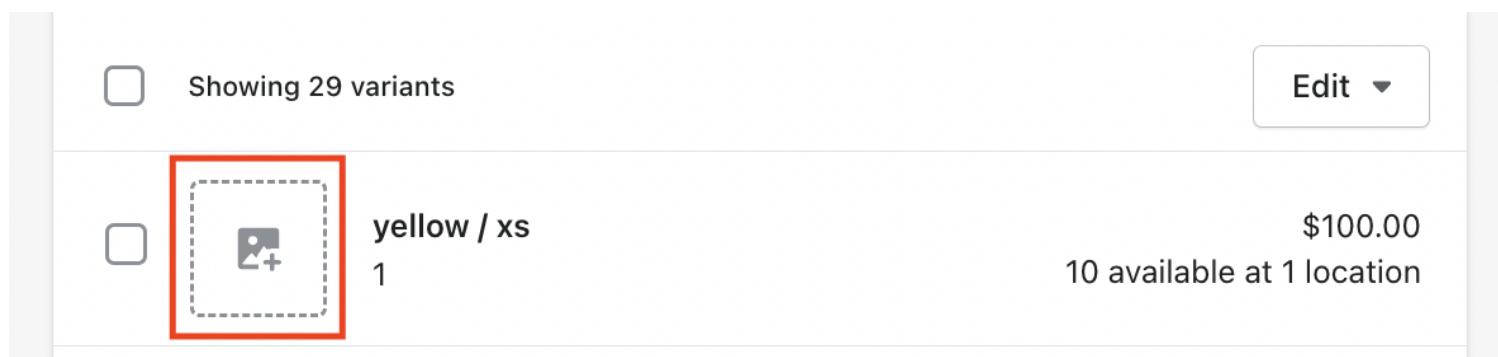

6. Click **Done**.

Add images to existing variants

1. From your Shopify admin, go to [Products ↗](#).

2. Click the name of the product that you want to edit.

3. In the **Variants** section, click on the image icon to assign an image to that variant.

The screenshot shows a list of product variants. At the top, there's a header with a checkbox labeled 'Showing 29 variants' and an 'Edit' button with a dropdown arrow. Below the header, there are two rows of variant information. The first row has a checkbox, a small image icon with a plus sign, the text 'yellow / xs', the price '\$100.00', and the availability '10 available at 1 location'. The second row has a checkbox and a small image icon with a plus sign. The image icon in the first row is highlighted with a red box.

4. Select a product image or click **Add image** to upload a new image.

5. Click **Save**.

Group images by color

When a color swatch on the Product page is selected, it updates the image and thumbnails of the product gallery with that given color. For this, you need to group product images by color. Lumia offers two ways to do this: Grouping images in order and Using alt text.

1. Grouping images in order

In this way the product gallery scrolls to the first image from the color group. And the rest of the images (no selected color) follow after it. Look at the product example [here ↗](#). This method is quite simple and requires a minimum of action on your part.

Steps to enable

1. From your Shopify admin, go to [Products ↗](#).

2. Click the name of the product that you want to edit.

3. Upload all images to the **Media** section.

4. Group images by color by dragging them. As a result, you will get several image groups of the same color.

5. Assign an image to each product color variant. But it is necessary to select the first image from each group.

Showing 5 variants

 Saddle Brown
B47504SB

 Yellow
B47504YW

 Turquoise
B47504TQ

 Green
B47504GR

 Red
B47504RD

6. Click **Done**.

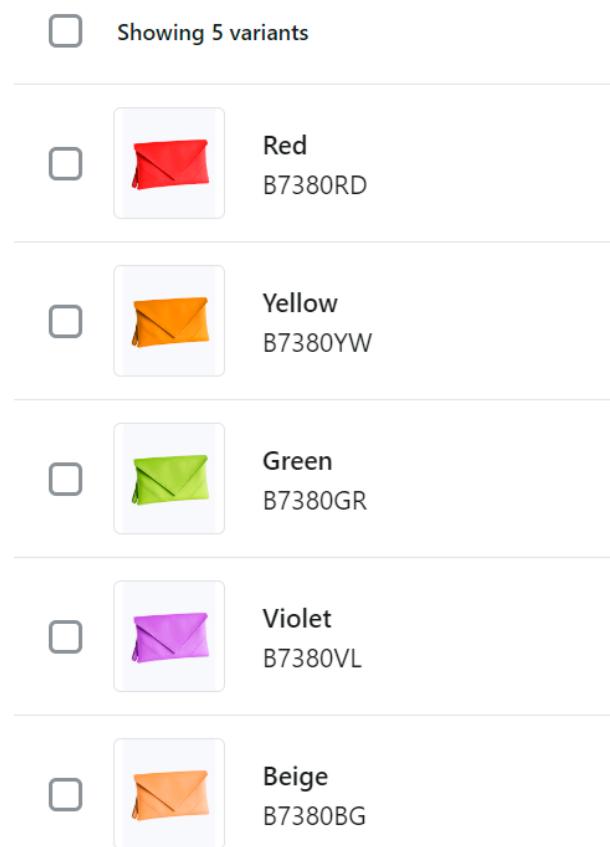

2. Using alt text

In this way the product gallery shows only images associated with selected color. The rest of the images are hidden. Look at the product example [here ↗](#).

Steps to enable

1. From your Shopify admin, go to [Products ↗](#).
2. Click the name of the product that you want to edit.
3. Upload all images to **Media** section.
4. Assign an image to each product color variant.

5. Add the alt tex to each image in the **Media** section. How to add alt text you can read [here ↗](#)

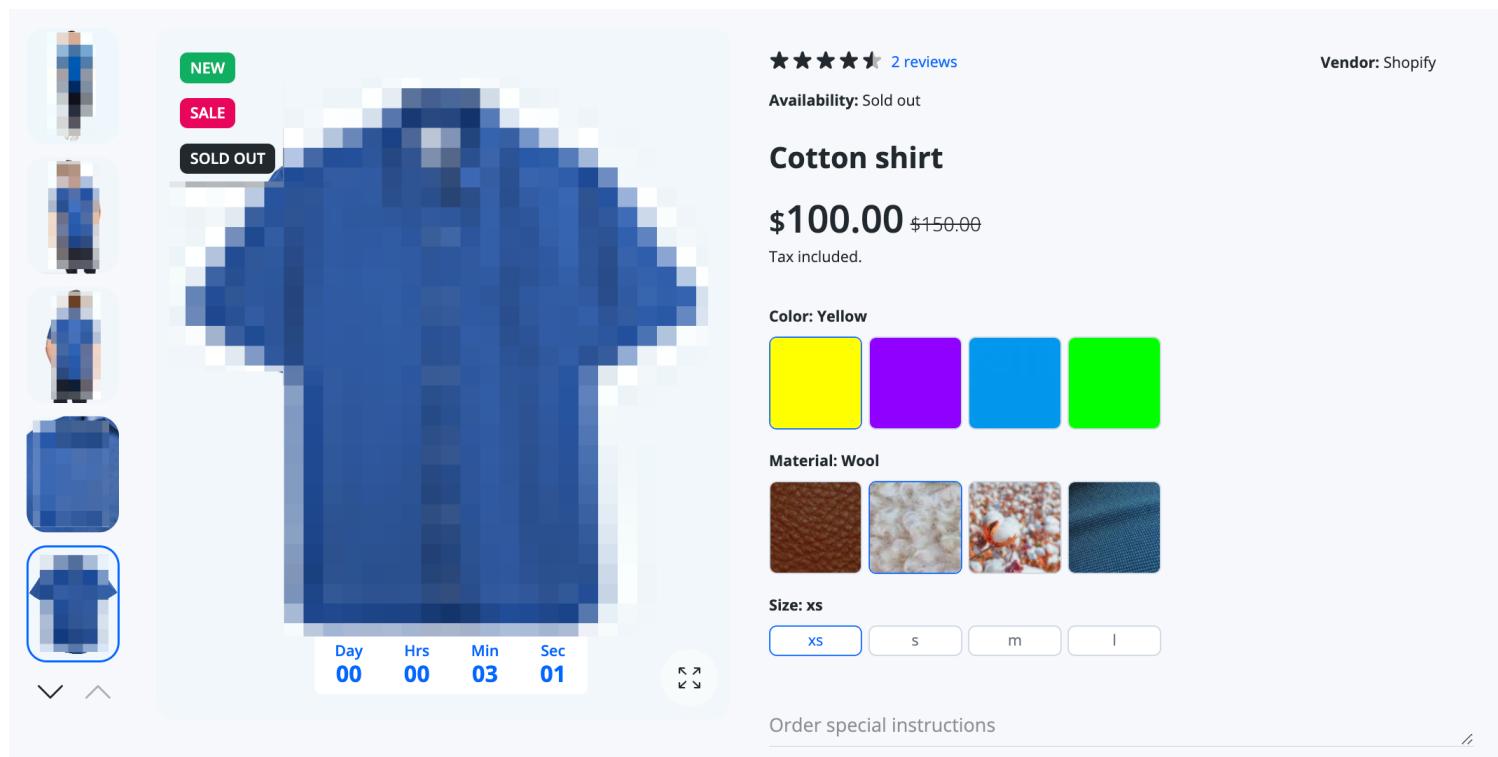

The alt text is the key to recognize that the image associated with one of the variants.

The alt text pattern is as follows: **color-value**

For example, alt text for images with red-coloured product would be **color-red**.

6. Click **Done**.

Pics

Enabled by default: No

Sortable block: Yes

Visibility: Product page info

Steps to enable

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Open the drop-down menu at the top of the page.
4. Select the **Product page** template that you want to edit from the dropdown menu.
5. Click the **Main product** section to view its settings.
6. **Edit** existing block **Variant picker** or Click **+ Add block** and select a **Variant picker** block.
7. In the **General** fields group select **Pills** from the **Type** selectbox.
8. In the **General** fields group check the **Use pics** checkbox.

9. In the **General** fields group uncheck the **Use featured variants images for 'Color' option** checkbox.

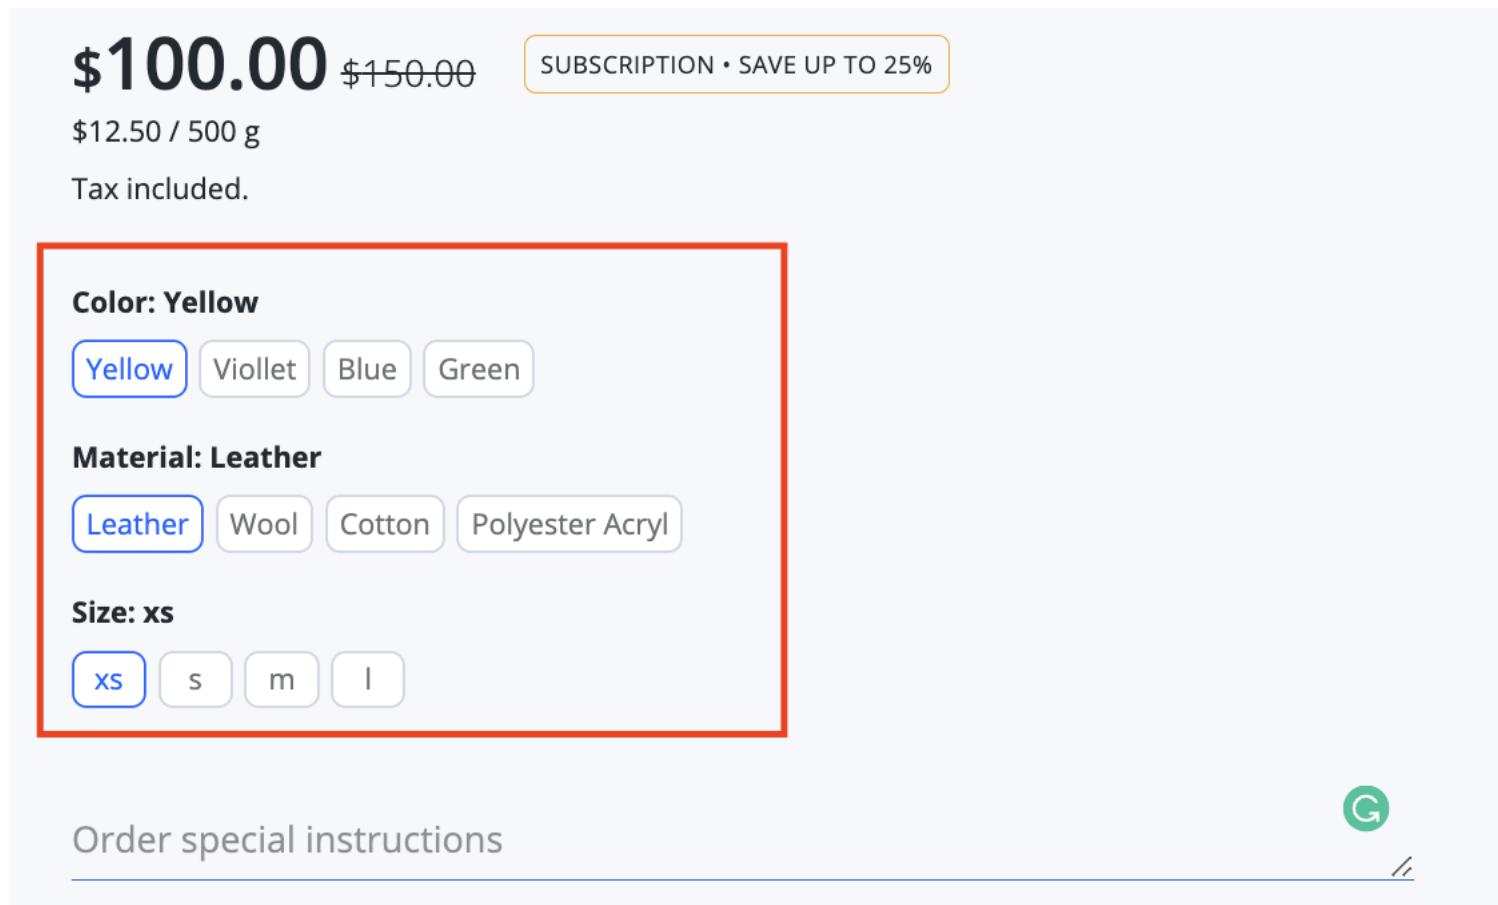

10. Click **Save**.

Preapre pics for upload to store Settings / Files

To upload any pic instead of a text pill in any of the three options, you just need to name the picture correctly. It is the name of the picture that is the key recognizer for the product options script.

The photo name pattern is as follows: `color-value-of-the-option.png` where `value-of-the-option` is the only variable part of the pattern.

Let's say you have the following set of product options:

So you have to upload the following pictures (**lower case** name, **100 x 100 px** size):

1. `pill-pic-color-yellow.png`

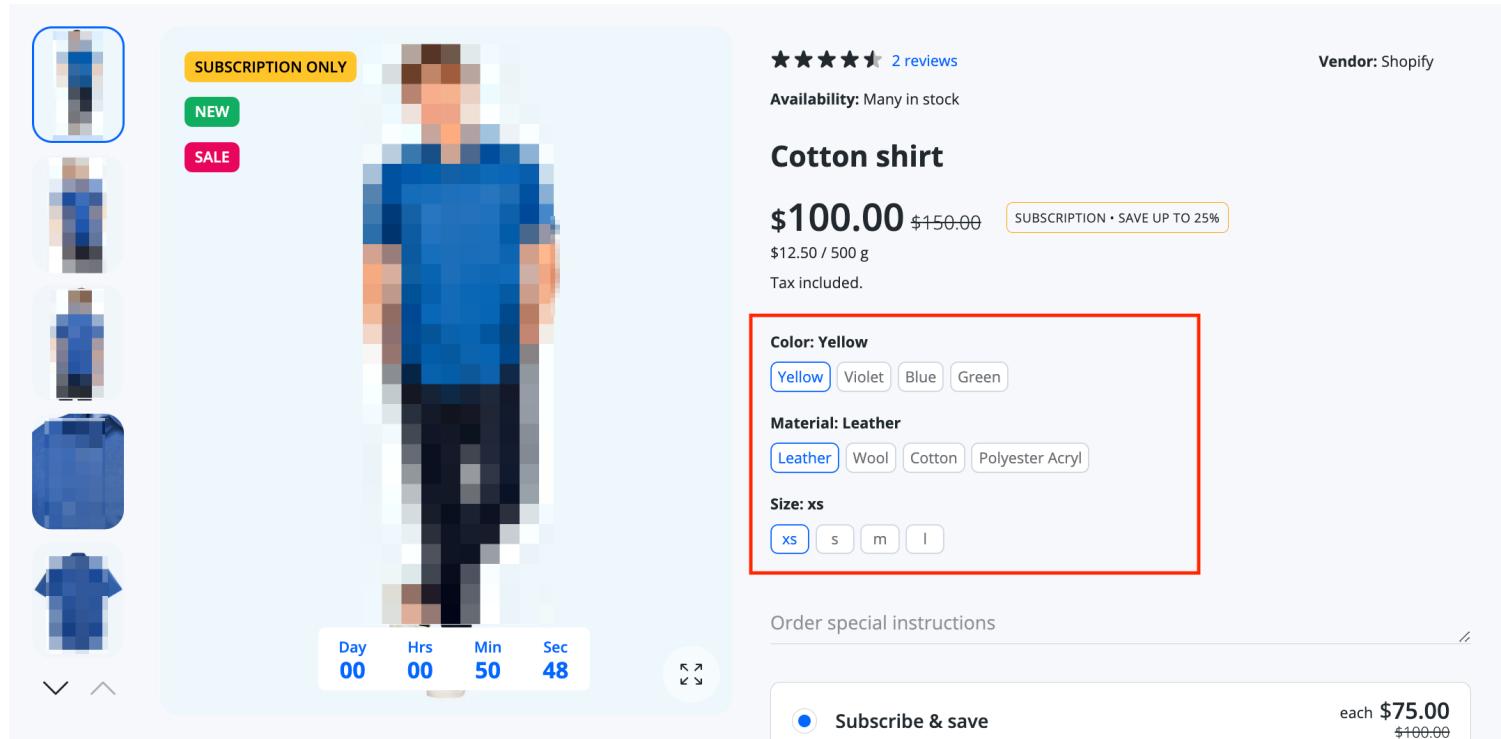

2. pill-pic-color-violet.png
3. pill-pic-color-blue.png
4. pill-pic-color-green.png
5. pill-pic-material-leather.png
6. pill-pic-material-wool.png
7. pill-pic-material-cotton.png
8. pill-pic-material-polyester-acryl.png

Upload

1. From your Shopify admin, go to **Settings > Files**.
2. Click **Upload files**.
3. Select files to upload (up to 20), and then click **Open**.

 Pics will be automatically picked up for products with repeating options. That is, unique pics for options need to be loaded only once.

Text

Enabled by default: No

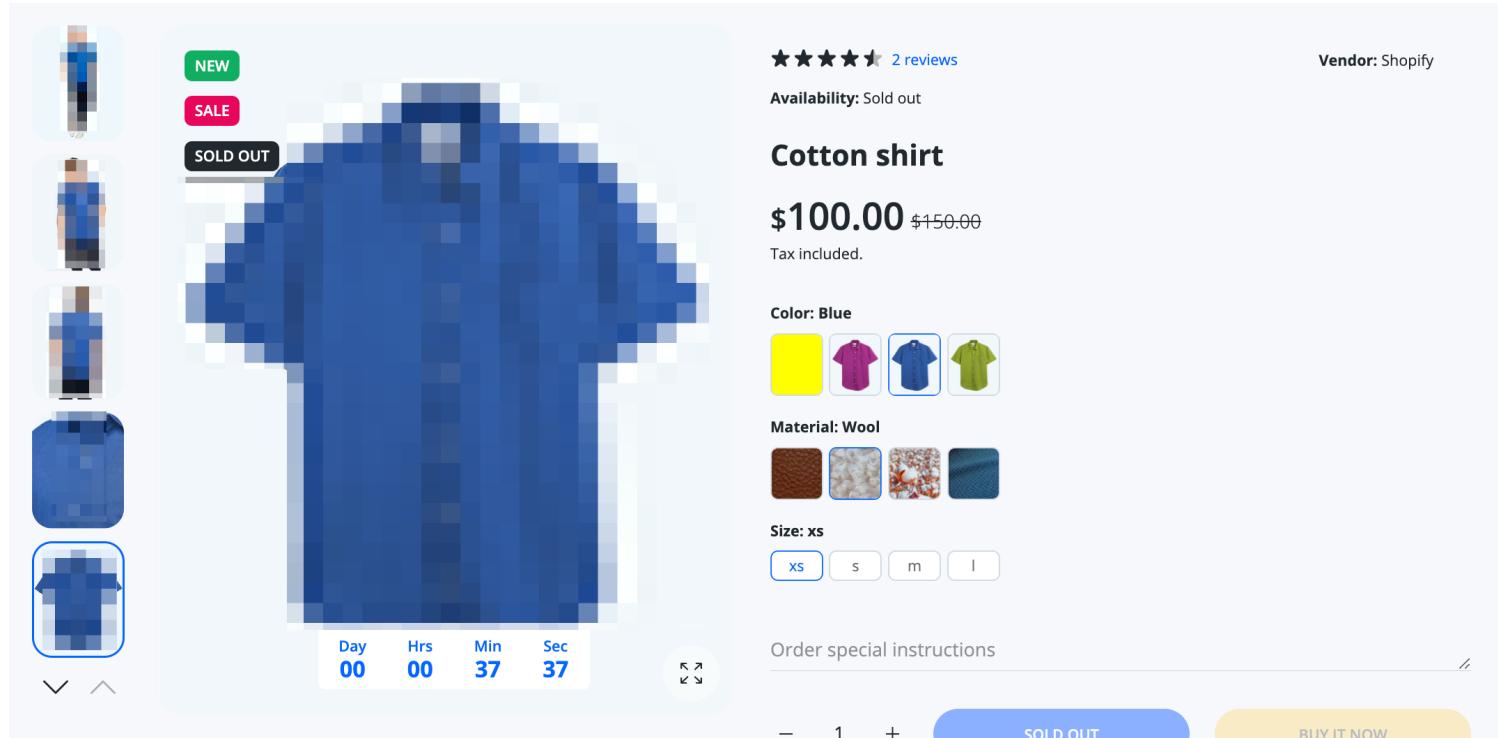

Sortable block: Yes

Visibility: Product page info

Steps to enable

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Open the drop-down menu at the top of the page.
4. Select the **Product page** template that you want to edit from the dropdown menu.
5. Click the **Main product** section to view its settings.
6. **Edit** existing block **Variant picker** or Click + **Add block** and select a **Variant picker** block.
7. In the **General** fields group select **Pills** from the **Type** selectbox.
8. In the **General** fields group uncheck the **Use pics** checkbox.
9. In the **General** fields group uncheck the **Use featured variants images for 'Color' option** checkbox.
10. Click **Save**.

Combined default

Enabled by default: Yes

Sortable block: Yes

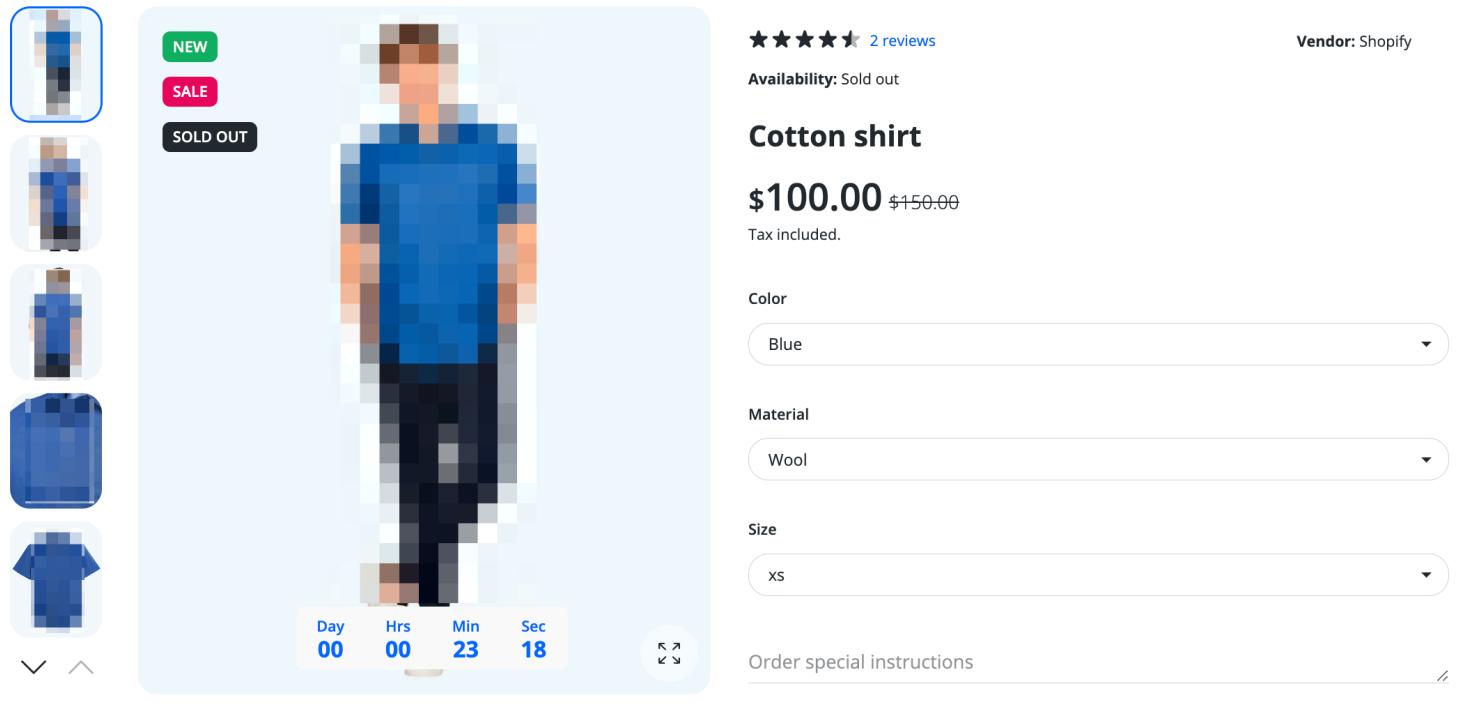

Visibility: Product page info

This kind of product options can show **variant image**, **pic** and **text** pills. By priority, the featured photo of the variant is searched, if it is not there, then pic is searched, if it is not there, then the text value of the variant option is displayed.

Steps to enable

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Open the drop-down menu at the top of the page.
4. Select the **Product page** template that you want to edit from the dropdown menu.
5. Click the **Main product** section to view its settings.
6. **Edit** existing block **Variant picker** or Click **+ Add block** and select a **Variant picker** block.
7. In the **General** fields group select **Pills** from the **Type** selectbox.
8. In the **General** fields group check the **Use pics** checkbox.
9. In the **General** fields group check the **Use featured variants images for 'Color' option** checkbox.
10. Click **Save**.

Dropdowns

Enabled by default: No

Sortable block: Yes

Visibility: Product page info

Steps to enable

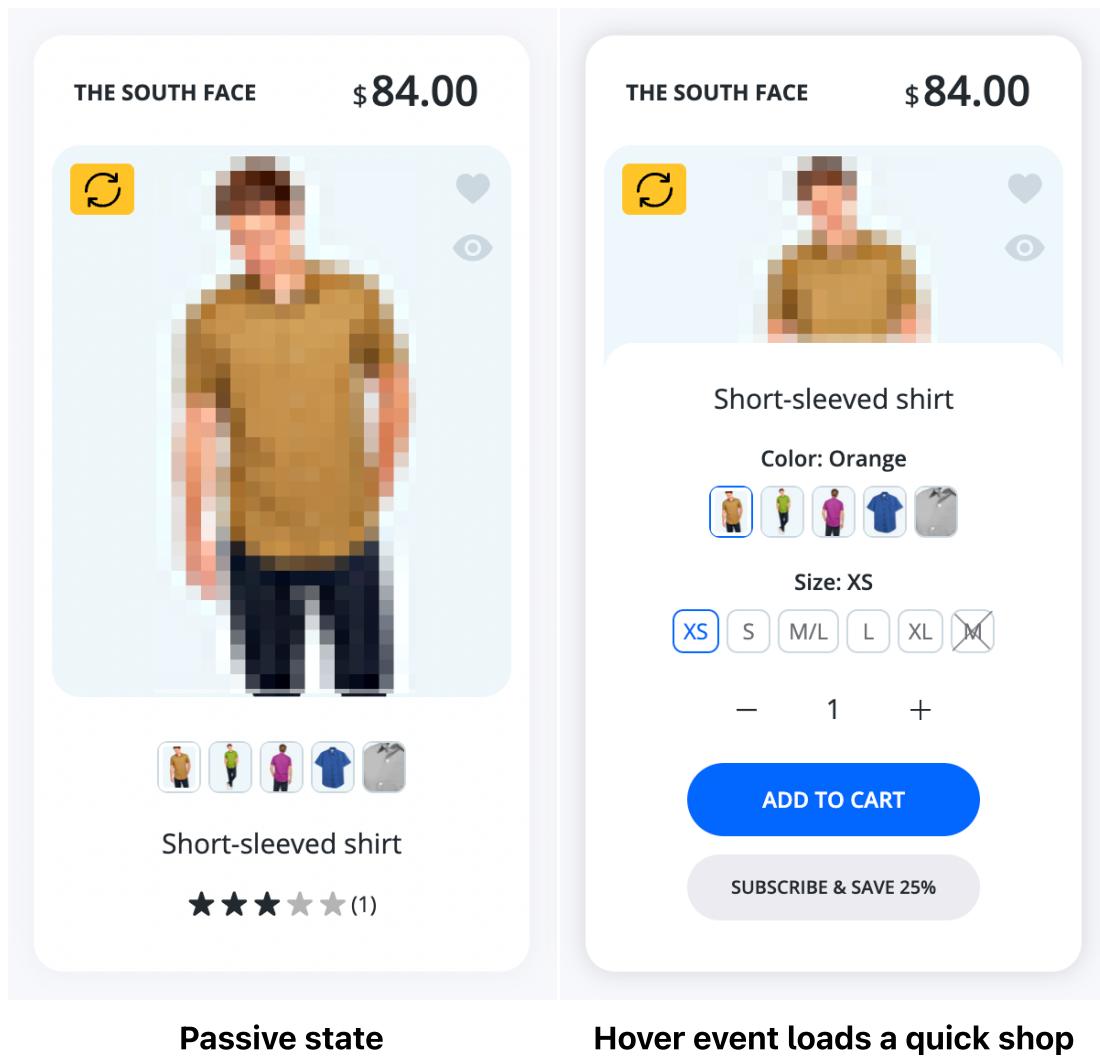

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Open the drop-down menu at the top of the page.
4. Select the **Product page** template that you want to edit from the dropdown menu.
5. Click the **Main product** section to view its settings.
6. **Edit** existing block **Variant picker** or **Click + Add block** and select a **Variant picker** block.
7. In the **General** fields group select **Dropdown** from the **Type** selectbox.
8. Click **Save**.

Product Quick Shop

By default, all main product cards on hover show possible product options for a quick purchase right from the card. But there are cases when it is more convenient to show a little more information. For this, a pop-up quick purchase module was made.

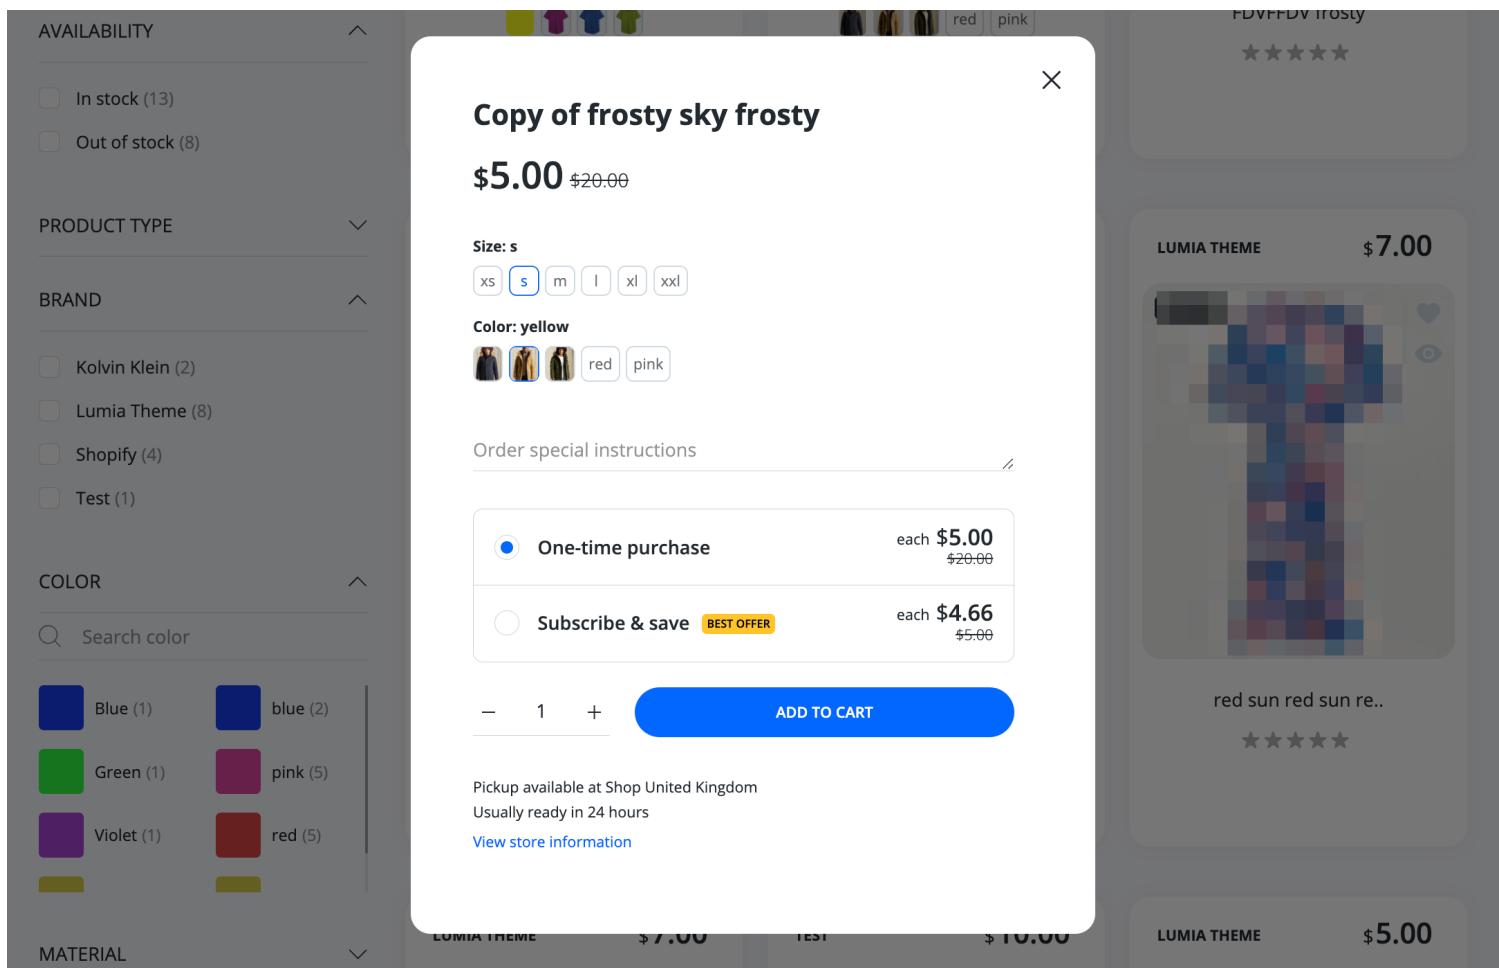

Enabled by default: Yes

Asynchronous: Yes (100% passes page speed insight metrics)

Quick Shop popup

Quick Shop popup is an auxiliary pop-up for buying products that require first to select certain options without going to the full product page, but directly from the place of the store where you are interested in the product and want to add it to the cart immediately. For example, if the product has a subscription options, or a required subscription, or the product has product options, or the product has additional options etc.

Enabled by default: Yes

Asynchronous: Yes (100% passes page speed insight metrics)

Subscriptions support: Yes new

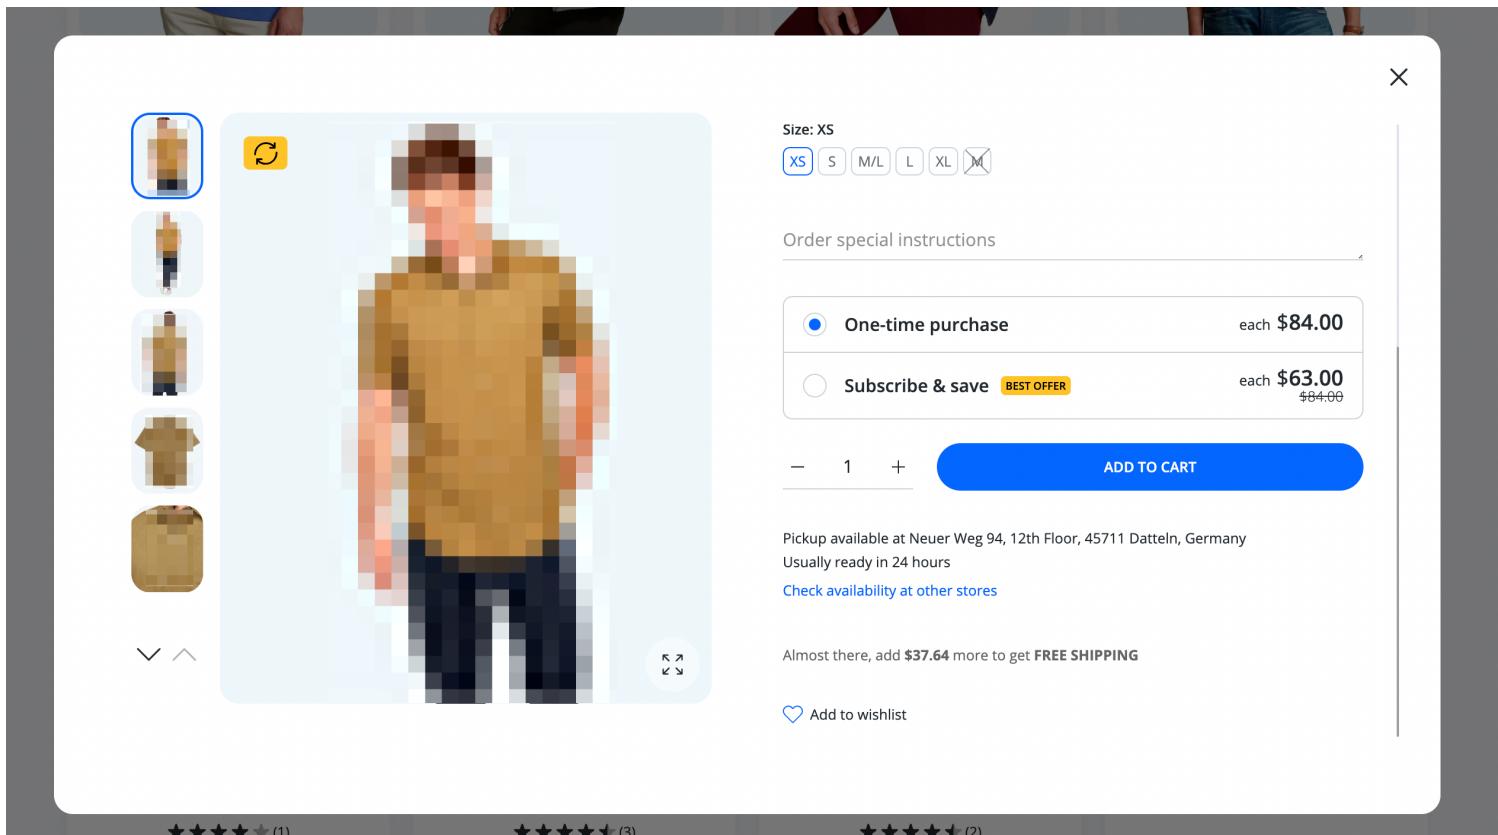

Visibility: Modern, classic and horizontal product cards.

Steps to enable / disable

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Click **Theme settings**.
4. Click **Product card**.
5. Select / Unselect **Open Quick Shop** in the **On click 'Select options' or 'Subscribe & save' button** field.
6. Click **Save**.

Product Quick View

The well-known module for quickly viewing product information or purchasing a product without always going to the full product page. Today it is difficult to imagine a store without this option.

Enabled by default: Yes

Asynchronous: Yes (100% passes page speed insight metrics)

Subscriptions support: Yes new

Visibility: Modern, classic, horizontal and compact product cards.

Steps to enable / disable

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Click **Theme settings**.
4. Click **Quick view**.

5. Check / Uncheck the **Enable** checkbox.

6. Click **Save**.

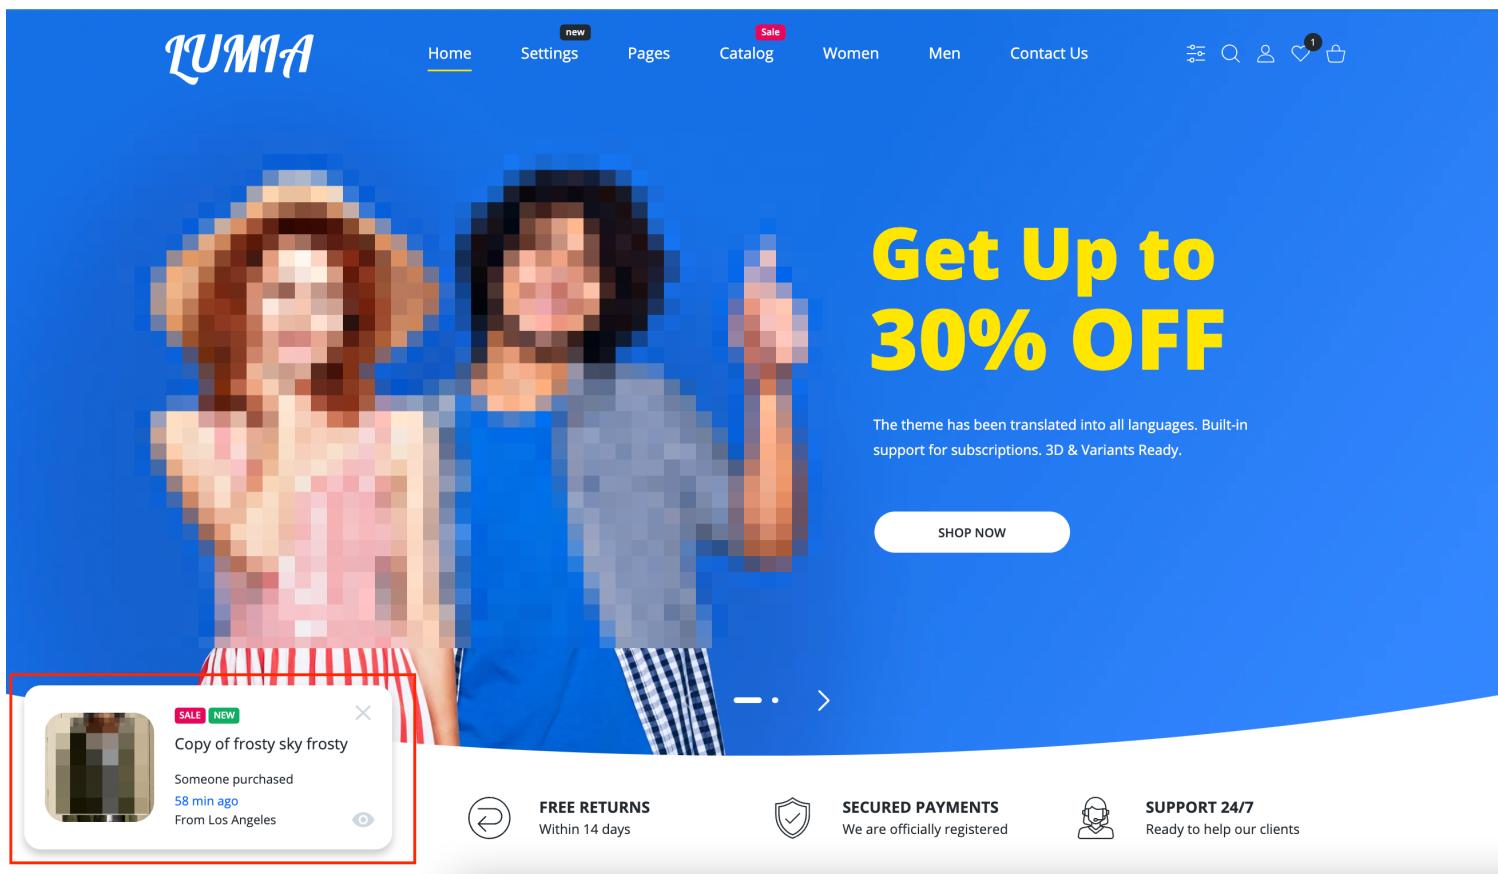

Admin interface

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Click **Theme settings**.
4. Click **Quick view** to view its settings.

| Option Name | Type | Values | Default | Description |
|--|----------------------|---|----------------------|--|

| Visibility Time of purchased product | Range | 5-20 | 12 | Time that you see current popup |

Short Description

Before the user studies the characteristics of the product in the main description, he will try to find out a quick short information about the product. With our theme, you can easily do it.

On product page

Enabled by default: Yes

Sortable block: Yes

Limit per page: 1

Can be individual per product?: Yes (metafields support)

Visibility: Product page info

It is possible to show a short description as static text, but it will be the same for all products in the current product template. And you can also write an individual short description for the product using a metafield.

Steps to enable

Enabled by default: Yes

 This first step only runs once if the option was disabled before.

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Open the drop-down menu at the top of the page.
4. Select the **Product page** template that you want to edit from the dropdown menu.
5. Click the **Main product** section to view its settings.
6. Edit existing block **Short description** or click **+ Add block** and select a **Short description** block.
7. Enter short description in the **Short Description** field.
8. Click **Save**.

Admin interface

| Option Name | Type | Values | Default | Description |

| Vertical space above the section on the Desktop | Range | 0-100 | 30 | Top space in px |
| Use global space on the desktop | Checkbox | <ul style="list-style-type: none">• True• False | true | If true then the global desktop margin (30px) is used, not the block-specific |
| Short Description | Richtext / Metafield | | Global, Description. | Short description text editor (metafields support) |

On collection page

Enabled by default: Yes

Can be individual per product?: Yes (metafields support)

Visibility: Product card on collection page (**List** layout mode)

Steps to enable

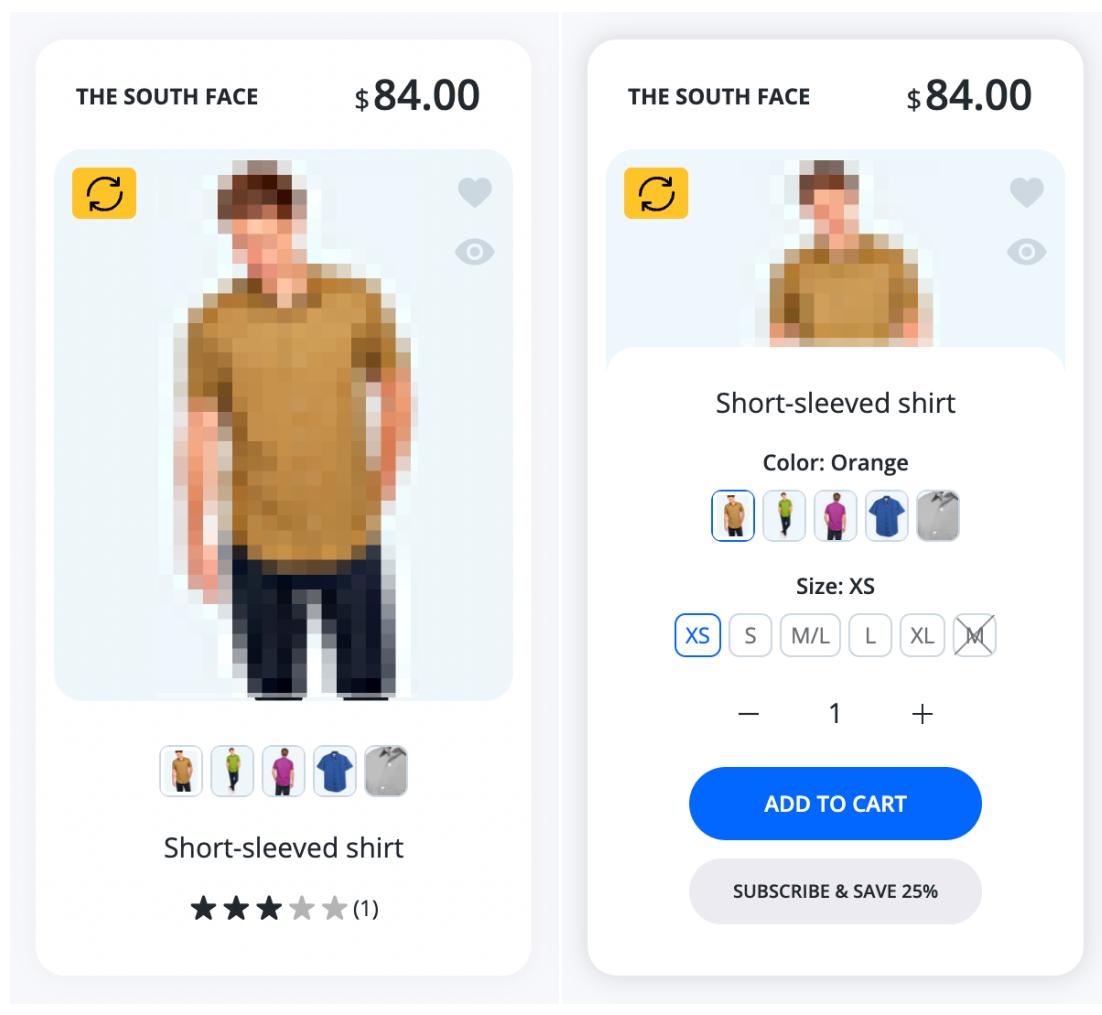

Enabled by default: Yes

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Click **Theme settings**.
4. Click **Product card**.
5. In the **Short description** fields group check the **Show** checkbox.
6. In the **Short description** fields group select **Product description** from the **Source** dropdown.
7. Click **Save**.

Subscriptions new

Adding subscriptions as a purchase option lets you sell products on a recurring basis. Depending on the subscription options you offer, your customers can choose to pay an agreed price for your product in a scheduled frequency. For example, you can offer subscriptions on a monthly, weekly, or daily basis.

Steps to enable / disable theme subscriptions interface

Enabled by default: Yes

Subscriptions interface is automatically enabled in all theme widgets. The main thing is that you only add subscription options to products. To do this, you need to use the [subscription app from the Shopify App Store](#). Most often, applications have a free plan which is enough for our theme because

there is no need to buy a special plan that allows you to include widgets in the theme in awkward places and often out of the general style of the site.

Our theme already has the whole front-end mechanism for catching product subscriptions with the inclusion of the necessary interface where necessary.

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Click **Theme settings**.
4. Click **Save & Subscribe**.
5. Check / Uncheck the **Enable theme subscriptions functionality** checkbox.
6. Click **Save**.

More info about subscriptions read in [official documentation ↗](#).

Skins

Skin colorization

The theme allows you to colorize any element of the store, both by manually setting your own colors and by using special ready-made theme presets. You can config the same skins like our demo manually or automatically using **Theme Styles**.

Manual colorization

A full course on how to paint a store in your corporate colors can be found in **Colorization**.

Automatic colorization with theme styles

The theme supports automatic recoloring and applying typography to your customized store in the style of our pre-installed skins:

- Skin Bags
- Skin Carparts
- Skin Electronics
- Skin Fashion 1, 2 (default)
- Skin Fashion 3 (soft)
- Skin Fashion 4 (strict)
- Skin Nutrition (dark)
- Skin Pets
- Skin Shoes
- Skin Toys

Skin homepage sections

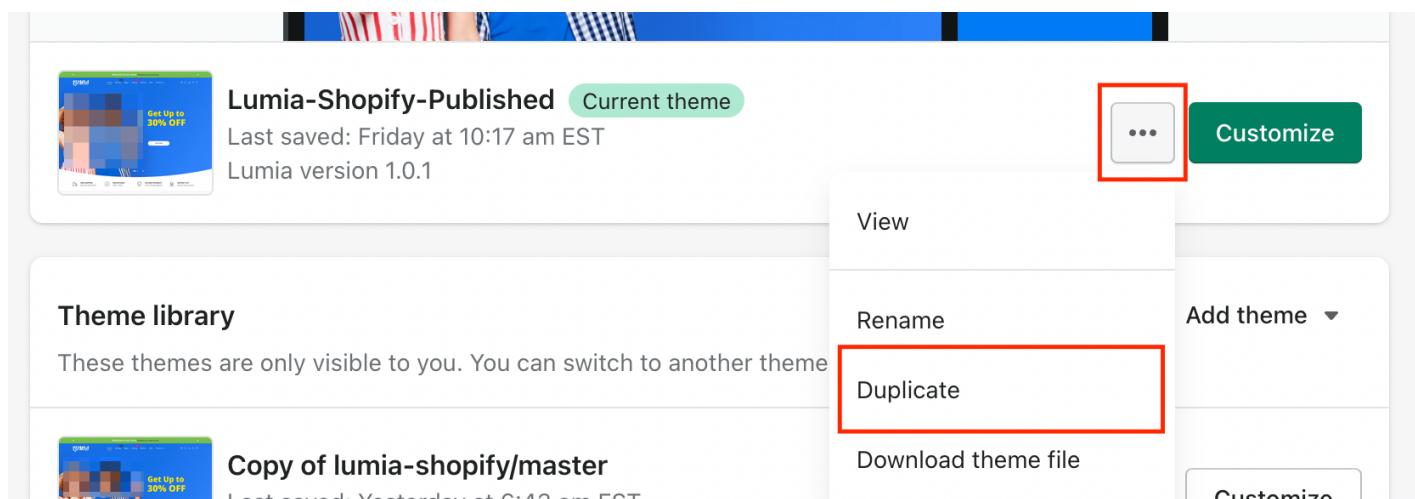

Each skin in our demo has, in addition to its unique colorization style, its own set of widgets between the header and footer. And let's say you want to try the same set of sections with your store that you have already set up and colored. Our theme allows you to do this.

Steps to import preset skin homepage sections

1 Create theme copy

 We recommend making changes to the copy because of firstly for preview and secondly for safety that nothing will break.

1. Login to Your shopify store. Go to **Online Stores > Themes**
2. Click the three dots next to the theme you want and after **Duplicate**.

2 Open theme files editor

1. Click the three dots next to the theme copy and after **Edit code**.

Theme library

Add theme ▾

These themes are only visible to you. You can switch to another theme by publishing it to your store.

Publish Customize

2. Do not close open editor. Next step describes how to write skin sections schema in the file.

3 Write skin sections schema

Let's say the You want to import **bags** skin sections to your theme copy:

Go to theme package folder `presets/bags/templates/`

1. Open the file `index.json` with simple text editor locally and copy file content.
2. Go to the theme file editor that we opened previous step.
3. Search the file `index.json` and click it to open in editor.

The screenshot shows the Shopify theme editor interface. On the left, there's a sidebar with a search bar at the top containing "index.json". Below the search bar are several folder icons: Layout, Templates, Add a new template, index.json (which is selected and highlighted with a red border), Sections, Snippets, Config, Assets, and Locales. The main area is titled "index.json" and contains the JSON code for the home page sections. The code includes sections for banners and a grid layout. At the top right of the main area, there are "Format json" and "Save" buttons.

```
1 v {  
2 v     "sections": {  
3 v         "16643761521a16538a": {  
4 v             "type": "index-banner-grid",  
5 v             "blocks": {  
6 v                 "1664376151123c8161-0": {  
7 v                     "type": "banner",  
8 v                     "settings": {  
9 v                         "image": "shopify://shop_images/slide-index1_ff1c6",  
10 v                        "color_placeholder": "#1b74e8",  
11 v                        "title": "30% OFF",  
12 v                        "subtitle": "Get Up to",  
13 v                        "invert_color": true,  
14 v                        "url": ""},
```

4. Replace content from local index.json and click **Save**.

The screenshot shows the same Shopify theme editor interface as the previous one, but with a red arrow pointing from the "Replace and Save" text above to the "Save" button on the right. The "index.json" file content has been replaced with a new version, which includes a different banner section with a different image and title. The "Save" button is highlighted with a red border.

```
1 v {  
2 v     "sections": {  
3 v         "1664803138c4bac11d": {  
4 v             "type": "index-banner-grid",  
5 v             "blocks": {  
6 v                 "1664803138bcacf437d-0": {  
7 v                     "type": "banner",  
8 v                     "settings": {  
9 v                         "image": "shopify://shop_images/slide-01_a0d72941-",  
10 v                        "color_placeholder": "#f7f8fc",  
11 v                        "title": "Instant Impact",  
12 v                        "subtitle": "NEW ARRIVAL",  
13 v                        "invert_color": false,  
14 v                        "url": "shopify://products/lumia-gift-card",
```

DONE! Thus, you can import sections on home page from any skin like in our demo. Afterwards, You need only load own images and assign products / collections to sections in the sections editor (theme customize).

Full skin import

When you upload our theme in the shopify platform, the full skin **Fashion 1** is automatically imported by default. This is when both the **skin colorization**, special skin settings and **skin homepage sections** are immediately merged together into a single look of a full-fledged skin.

What if you want to do a full skin import of any skin from our demo in the same way?

Especially for this, we have provided full skin import files in the theme package.

There are 2 ways to import full skin: **soft** and **hard**.

| | Soft import | Hard import |
|--|-------------|-------------|
| Saves your customized theme settings | Yes | No |
| Saves your customized header/footer/announced bar/promo section settings | Yes | No |
| Saves customized theme sections on home page | No | No |
| 100% match with the view as in the demo | No | Yes |

Soft import steps

1 Apply skin colors

Apply skin colors as describe in **Automatic colorization with theme styles**.

2 Import skin homepage sections

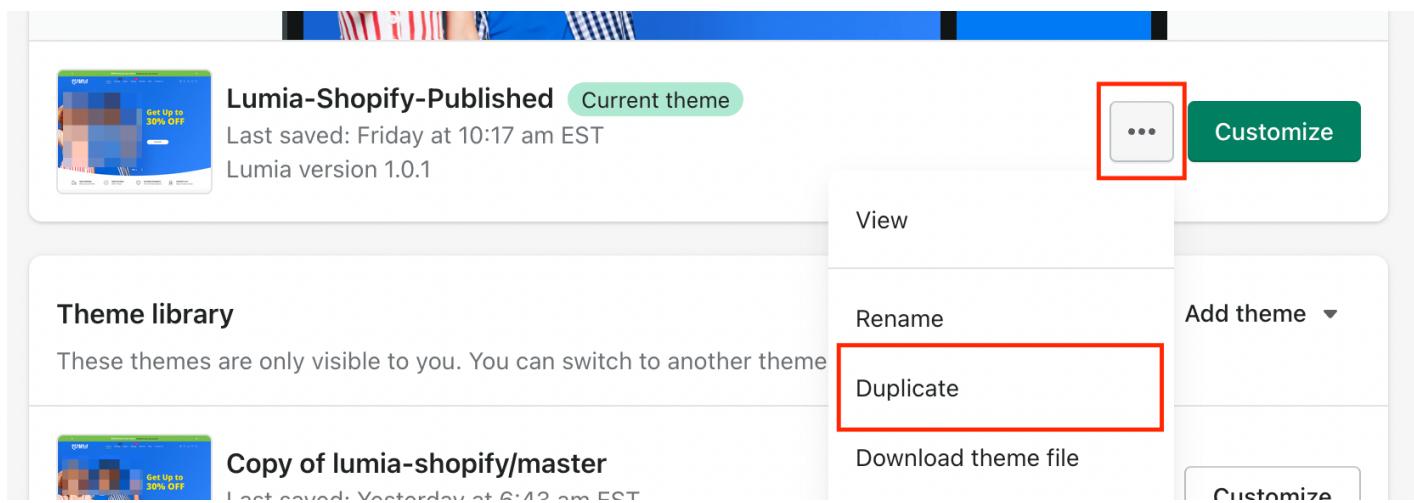

Import skin homepage sections as described in **Steps to import preset skin homepage sections**

Hard import steps

1 Create theme copy

⚠️ For preview and safety, we recommend making changes to the copy so that nothing will break.

1. Login to Your shopify store. Go to **Online Stores > Themes**
2. Click the three dots next to the theme you want and after **Duplicate**.

2 Open theme files editor

1. Click on the three dots next to the theme copy and after **Edit code**.

2. Do not close open editor. Next step describes how to write skin settings data in the theme file.

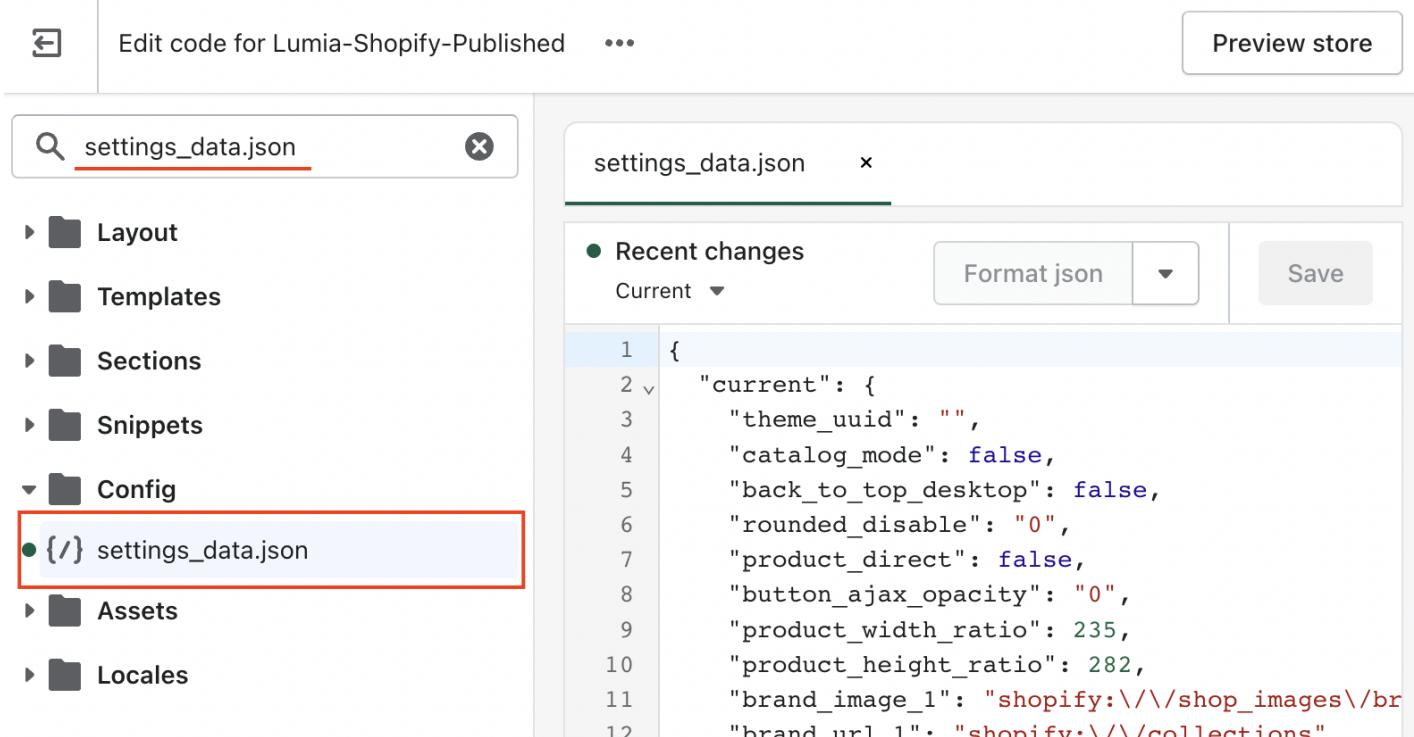

3 Write skin settings data

Let's say the You want to import **bags** skin settings data to your theme copy:

Go to theme package folder `presets/bags/config/`

1. Open the file `settings_data.json` using a simple text editor locally and copy its content.
2. Go to the theme file editor that we've opened previous step.
3. Search the file `settings_data.json` and click it to open in an editor.

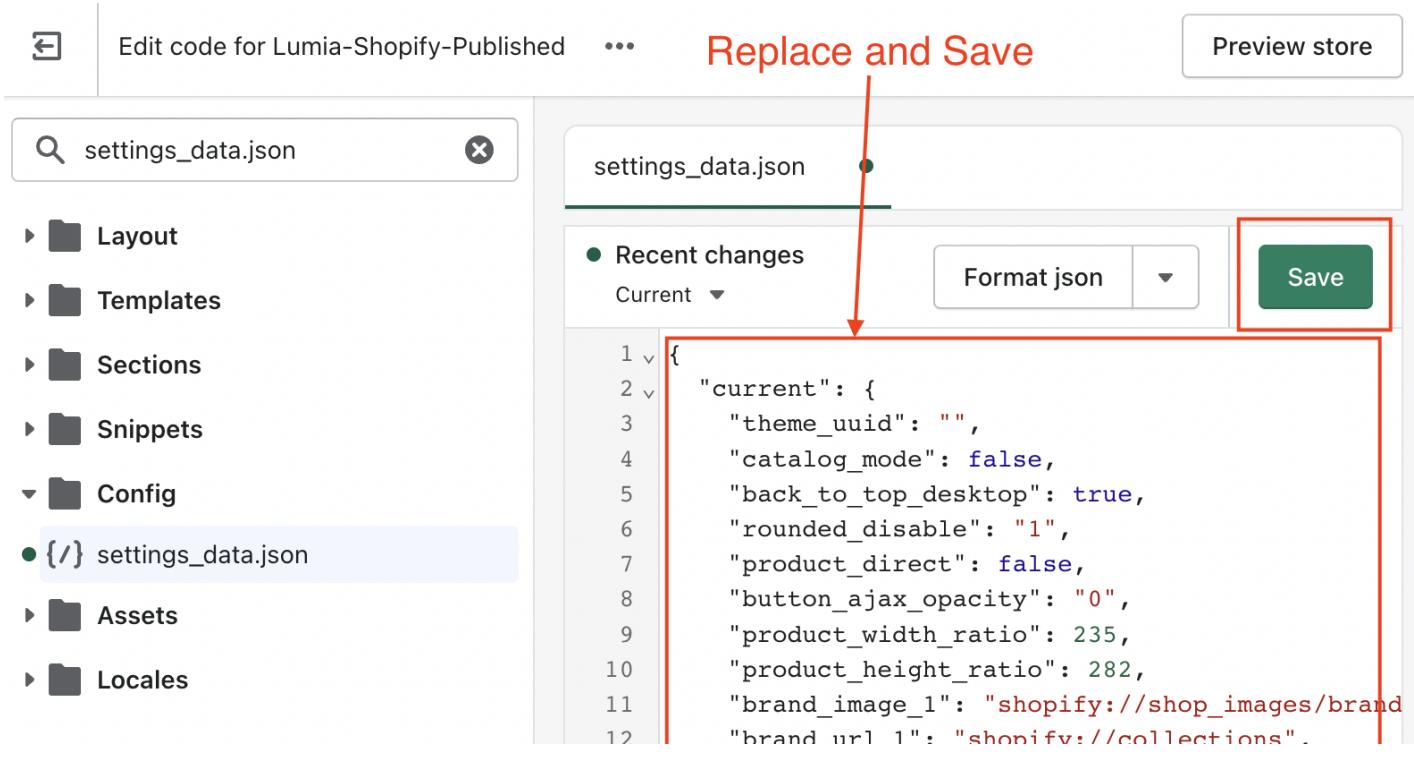

The screenshot shows the Shopify theme file editor interface. At the top, there's a search bar with "settings_data.json" and a sidebar with various theme sections like Layout, Templates, Sections, Snippets, Config, Assets, and Locales. The "Config" section is expanded, and the file `settings_data.json` is selected, highlighted with a red box. The main area shows the JSON code for the file, with line numbers from 1 to 12. The code includes settings such as theme UUID, catalog mode, back-to-top behavior, rounded disable, product direct, button ajax opacity, product width ratio, product height ratio, brand image URL, and brand URL 1.

```

1 {<br>
2   "current": {<br>
3     "theme_uuid": "",<br>
4     "catalog_mode": false,<br>
5     "back_to_top_desktop": false,<br>
6     "rounded_disable": "0",<br>
7     "product_direct": false,<br>
8     "button_ajax_opacity": "0",<br>
9     "product_width_ratio": 235,<br>
10    "product_height_ratio": 282,<br>
11    "brand_image_1": "shopify://shop_images/brand",<br>
12    "brand_url_1": "shopify://collections"

```

4. Replace content from the local index.json and click **Save**.

The screenshot shows the Shopify theme file editor after changes have been made. The sidebar still has the "Config" section expanded, and the file `settings_data.json` is selected. The main area shows the same JSON code as before, but with a few changes: the "catalog_mode" setting is now set to `true`, and the "rounded_disable" setting is now set to `"1"`. A red box highlights the file path in the sidebar, and a red arrow points to the green "Save" button in the top right corner of the editor.

```

1 {<br>
2   "current": {<br>
3     "theme_uuid": "",<br>
4     "catalog_mode": true,<br>
5     "back_to_top_desktop": true,<br>
6     "rounded_disable": "1",<br>
7     "product_direct": false,<br>
8     "button_ajax_opacity": "0",<br>
9     "product_width_ratio": 235,<br>
10    "product_height_ratio": 282,<br>
11    "brand_image_1": "shopify://shop_images/brand",<br>
12    "brand_url_1": "shopify://collections"

```

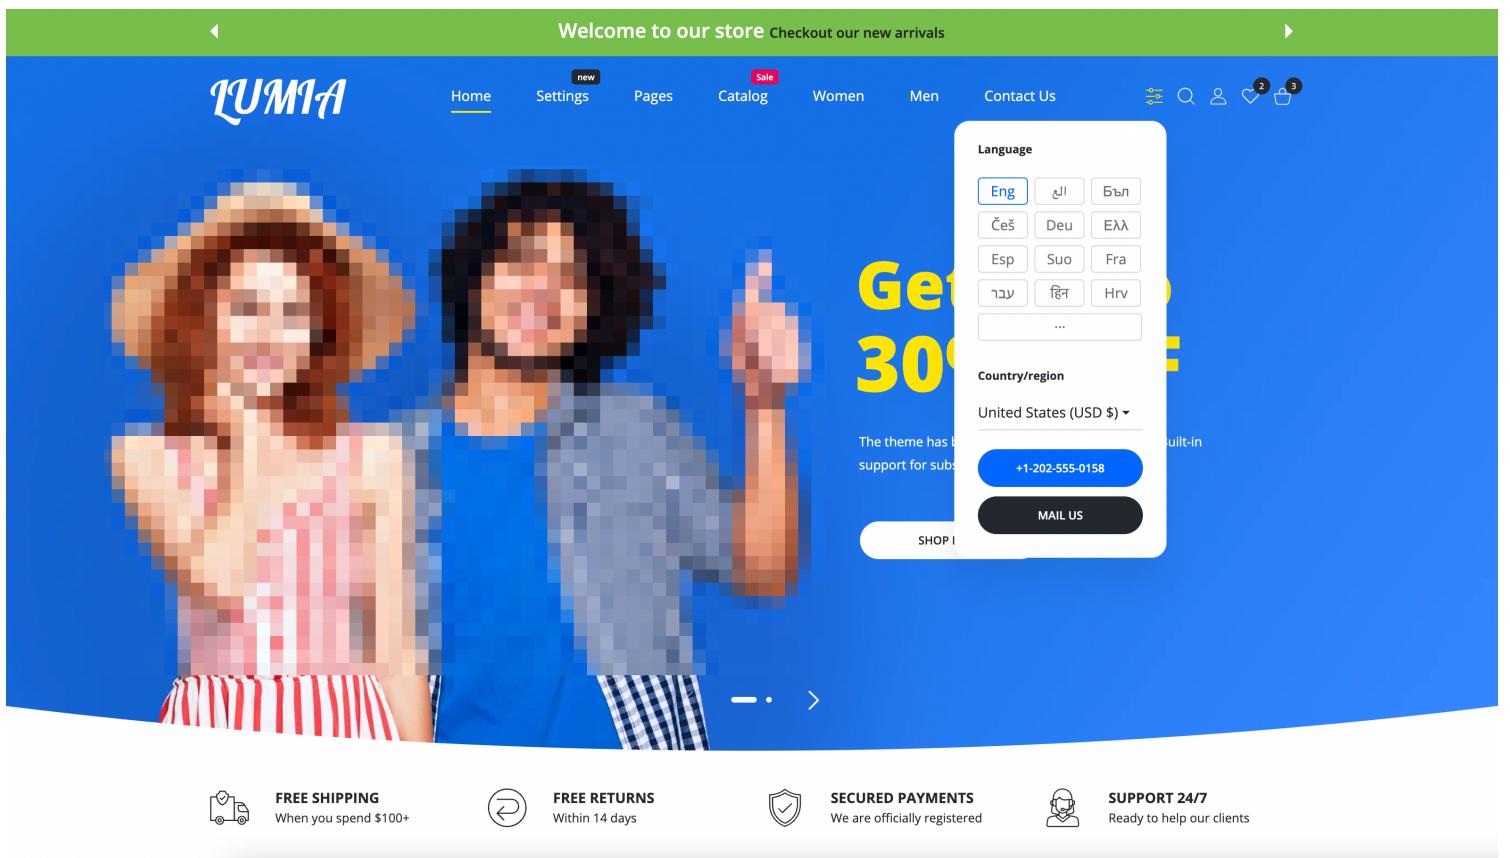

4 Import skin homepage sections

Import skin homepage sections as described in **Steps to import preset skin homepage sections**

DONE! Thus, you can import a full skin like in our demo. Afterwards, You only need to load your own images and assign products / collections to sections in the sections editor (theme customize).

Multilanguages

Customers all over the world enjoy viewing content in their native language. Translating your store's content can lead to more sales because your international customers can better understand your marketing, product details, shipping, and return policies.

Enabled by default: Yes

You can enable multiple languages from your Shopify admin to create separate URLs for your translated content. When customers land on a translated URL, your store automatically shows the translated version if translations exist.

Managing languages

Add new languages to your online store

1. From your Shopify admin, go to **Settings > Languages**.

2. Click **Add Language**.

3. Choose a language from the drop-down menu, then click **Add**.

4. Select an active market to add your language to.

If you need to create a new active market, then follow the steps to [add a market ↗](#)

5. Do either of the following:

- Use the [Translate & Adapt app ↗](#) to [import your translated content ↗](#) into Shopify.
- Visit the [Shopify App Store ↗](#) and install a translation app to your store. Follow the steps in the app to translate your online store's content and publish new languages.

6. Click **Preview** to view different languages in your online store. You can preview both published and unpublished languages.

Change the default language of your online store

You can change the default language of your store. Your default store language is used in your Shopify admin and in your store's checkout and theme.

1. From your Shopify admin, go to **Settings > Languages**.
2. In **Published languages**, click **Change default** beside the language that is your current default language.
3. Select a language from the menu.
4. Click **Save**.

I need to translate theme to other languages that are absent in the list of translated langs

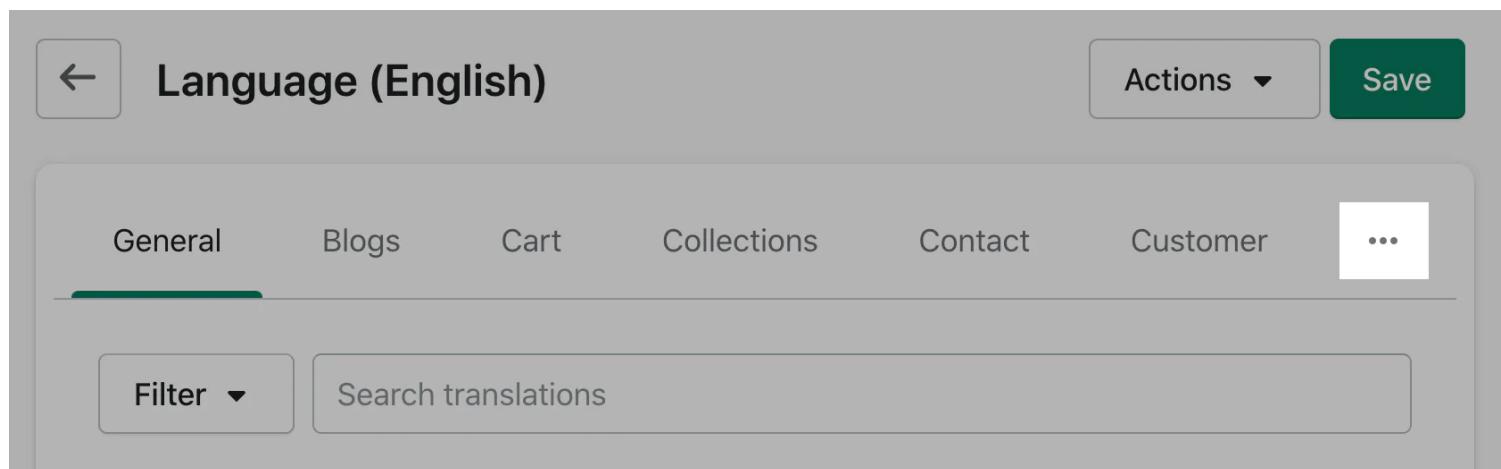

Write to [our support team ↗](#) and we will add additional languages (that are not in the list) to your theme and also add them to the theme package.

Changing the wording in theme

You can customize your online store by changing the default text in your theme. For example, you can change "Cart" to "Shopping bag", or "Sold out" to "Unavailable".

Language editor

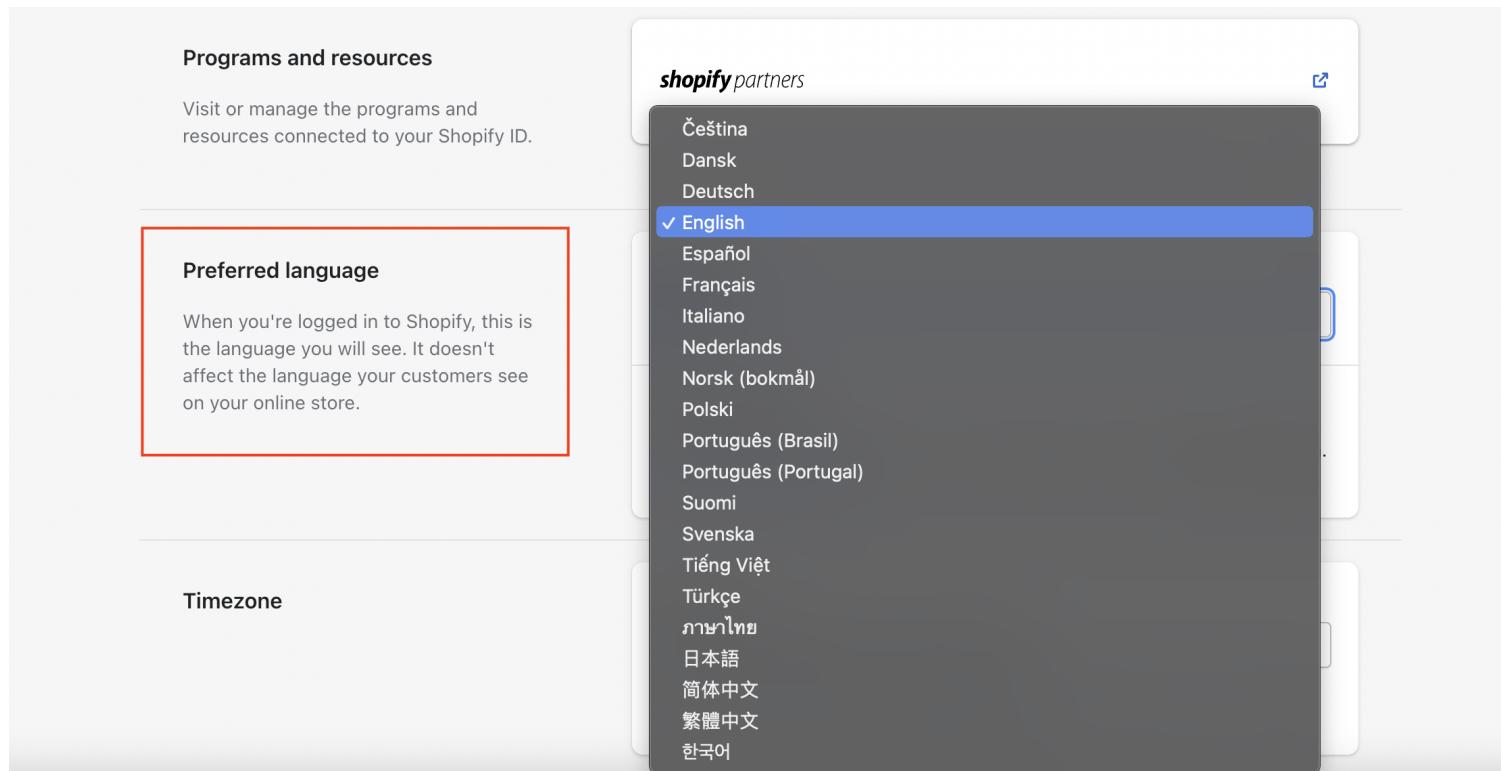

You can change the default wording in your theme.

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the theme that you want to edit, and then click **Actions > Edit languages**.
3. Click the tab that includes the text that you want to change.
4. Edit the text.
5. Click **Save**.

Theme admin interface translating

 A special advantage of our theme over many others is that we wrote the theme according to [shopify localization standards ↗](#) (usually it takes much longer but worth the result), so our theme administration page is also translated into all languages that supports shopify platform for admin panel.

Enabled by default: English

Theme admin interface is translated to the language that is set in you Shopify account settings in **Preferred language** dropdown.

Japanese example of the theme translated admin interface.

How to disable translated admin interface

It can be convenient to use the original language in which the theme interface was written, especially when studying the theme interface and documentation in-depth. When we wrote the documentation, we took screenshots of the interface in basic English.

If you want to see **English** admin interface instead of translated into your shopify account language (for example **German**) then do next:

1. Click the three dots next to the theme and after **Edit code**.

Theme library

Add theme ▾

These themes are only visible to you. You can switch to another theme by publishing it to your store.

The screenshot shows the Shopify Theme library. There are three themes listed:

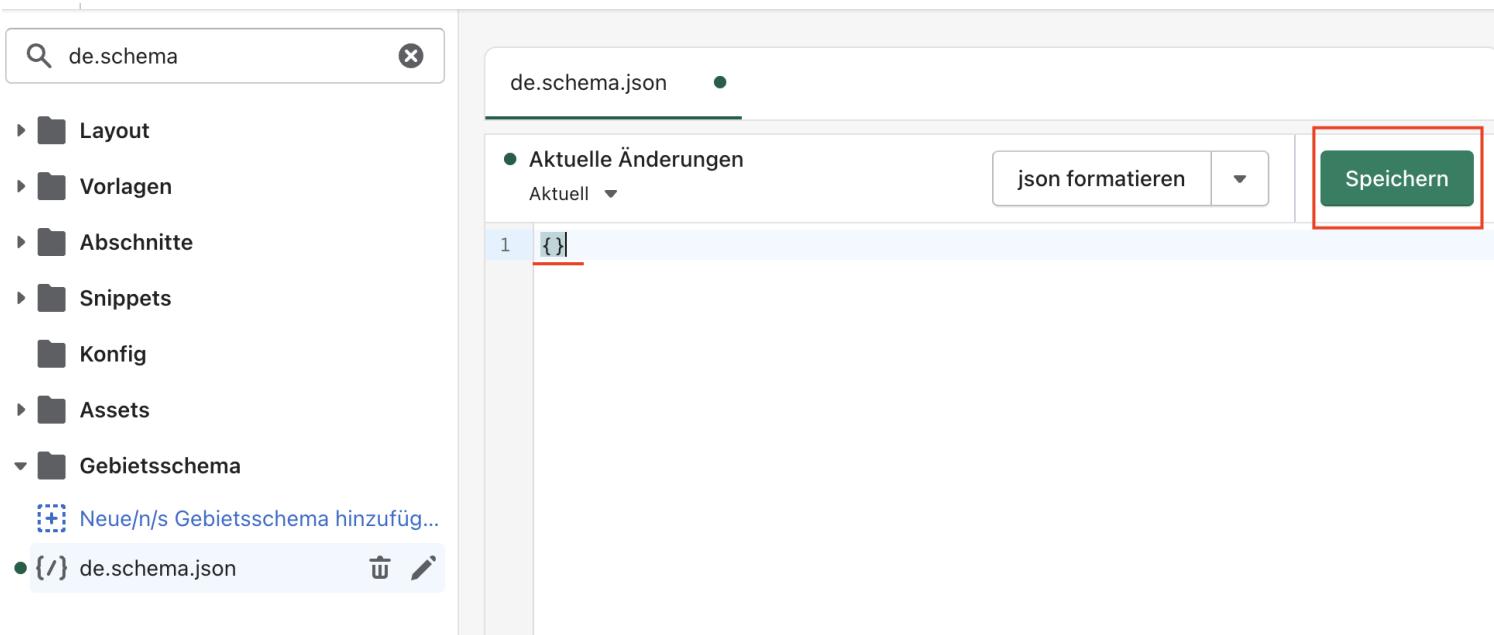

- Copy of lumia-shopify/master**: Last saved: Yesterday at 6:43 am EST, Lumia version 1.0.1. It has a 'More options' button (with a red box), a 'Publish' button, and a 'Customize' button.
- lumia-shopify/master**: Last saved: Friday at 7:54 am EST, Lumia version 1.0.1. It has a 'Publish' button and a 'Customize' button.
- index-11**: Last saved: Wednesday at 3:43 pm EST, Lumia version 1.0.1. It has a 'More options' button (with a red box), a 'Rename' button, a 'Duplicate' button, a 'Download theme file' button, and an 'Edit code' button (which is also highlighted with a red box).

2. Search the file `de.schema.json` and click it to open in the editor.

The screenshot shows the JSON editor for the `de.schema.json` file. The left sidebar shows a tree structure with categories like Layout, Vorlagen, Abschnitte, Snippets, Konfig, Assets, and Gebietsschema. The `de.schema.json` file is selected and highlighted with a red box. The right panel shows the JSON code with a preview of the changes:

```
1 | {
2 |   "settings_schema": {
3 |     "theme_verification": {
4 |       "name": "Themenüberprüfung",
5 |       "settings": {
6 |         "content": {
7 |           "info": "Die Info"
8 |         },
9 |         "theme_uuid": {
10 |           "label": "Füllen Sie den Kaufcode aus",
11 |           "info": "[Wie bekomme ich den Kaufcode?](https://help.marke"
12 |         },
13 |         "theme_email": {
14 |           "label": "Deine E-Mail".
```

3. Replace content 4 in righth part with `{}` and click **Save**.

i In the future, if you want to return the translation of the theme admin interface, you need to repeat same steps but in that case you need to replace `{ }` with the original file content that is in the theme package which you got (**locales/de.schema.json**).

Typography

Our theme allows you to fully control the typography from fonts to the calibration of all font-weight options (Light, Normal, Medium, Semi Bold, Bold, Extra Bold).

Examples of the same text with different font-family and font-weight:

1. [Nutrition skin - About Us page ↗](#)

A few words about us

Our web company consists of web programmers and designers with extensive experience in the web market. Each of us worked as hired worker to create templates for Magento, **Shopify**, Wordpress and others. We decided to unite our forces and to do projects such as we would like them to be in accordance to our **experience in customer support**.

2. [Fashion 1 skin \(default\) - About Us page ↗](#)

A few words about us

Our web company consists of web programmers and designers with extensive experience in the web market. Each of us worked as hired worker to create templates for Magento, **Shopify**, Wordpress and others. We decided to unite our forces and to do projects such as we would like them to be in accordance to our **experience in customer support**.

3. [Bags skin - About Us page ↗](#)

A few words about us

Our web company consists of web programmers and designers with extensive experience in the web market. Each of us worked as hired worker to create templates for Magento, **Shopify**, Wordpress and others. We decided to unite our forces and to do projects such as we would like them to be in accordance to our **experience in customer support**.

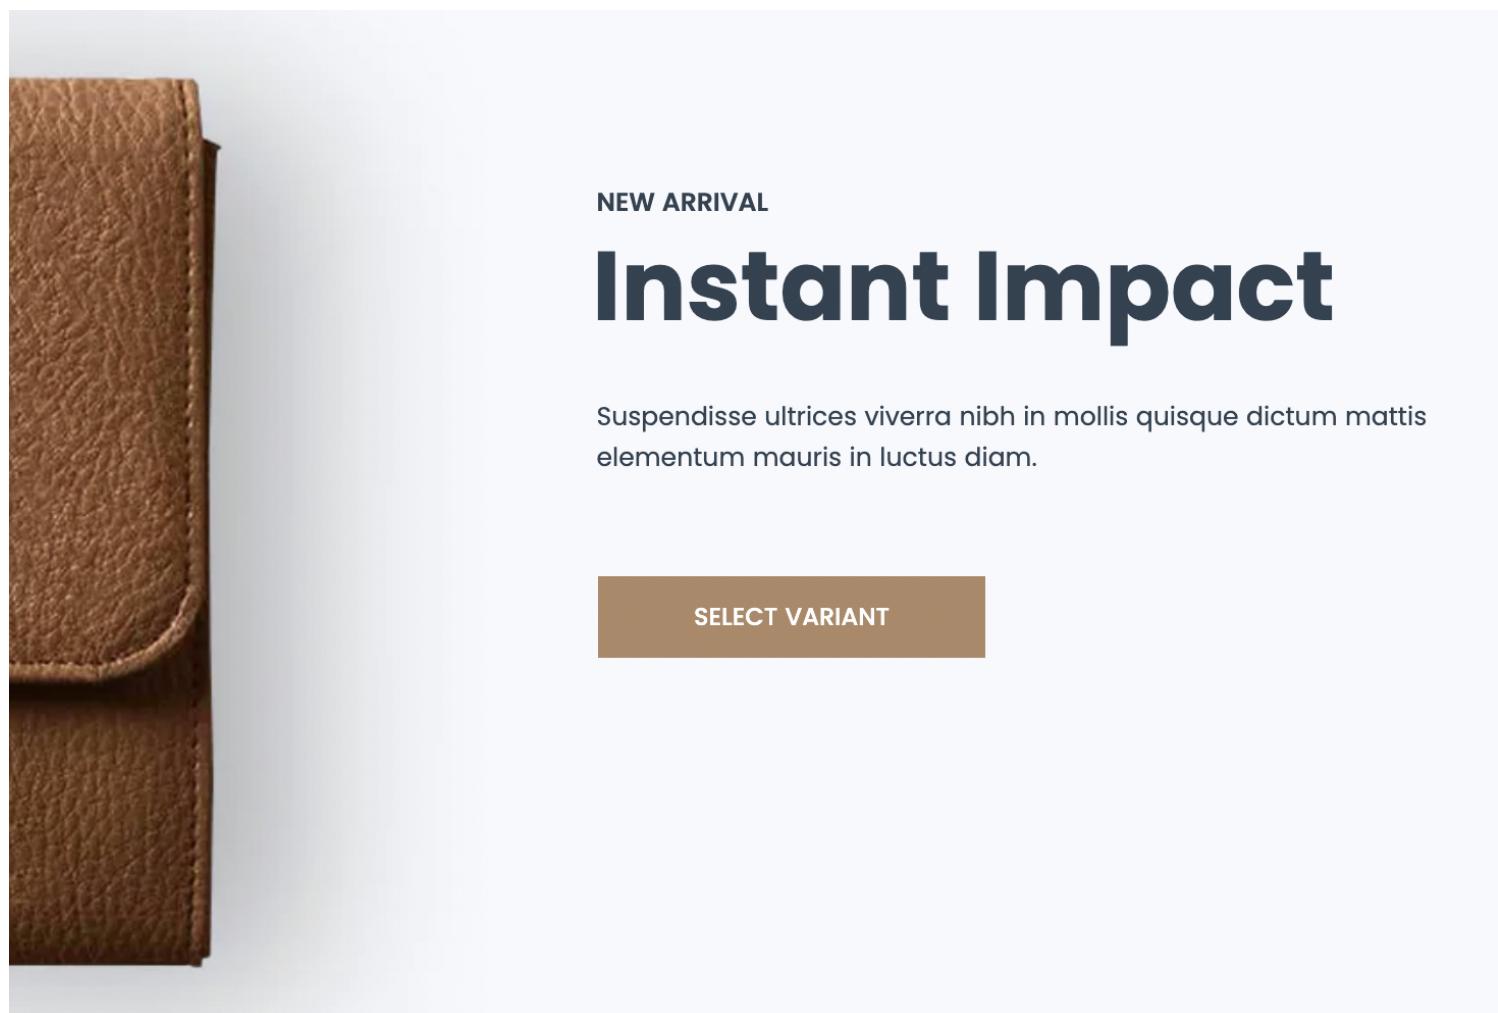

4. [Toys skin - About Us page ↗](#)

A few words about us

Our web company consists of web programmers and designers with extensive experience in the web market. Each of us worked as hired worker to create templates for Magento, **Shopify**, Wordpress and others. We decided to unite our forces and to do projects such as we would like them to be in accordance to our **experience in customer support**.

Examples of different banners and headings font-family / font-weight sets:

[Live preview ↗](#)

How to change fonts on Shopify

You can customize your own font and font weight configuration for all texts altogether and separately for headings and banners.

It is possible to select a font from three sources in our theme:

1. [Shopify library font ↗](#)

2. [Google font ↗](#)

3. Custom font

Steps to set global text font

1. From your Shopify admin, go to **Online Store > Themes**.

2. Find the Lumia theme that you want to edit, and then click **Customize**.

3. Click **Theme settings**.

4. Click **Typography**.

5. In the **Body** fieldsgroup fill in one of the three variants:

- Select **Shopify library font** from the **Font source** field and select font from the **Shopify library font** field.
- Select **Google font** from the **Font source** field and enter google font name in the **Google font name** field or select preset google font name which is used in the theme from the **or select preset google** field.
- Select **Custom font** from the **Font source** field and enter custom font name in the **Custom font** field.

6. Click **Save**.

Steps to set headings and banners font

1. From your Shopify admin, go to **Online Store > Themes**.

2. Find the Lumia theme that you want to edit, and then click **Customize**.

3. Click **Theme settings**.

4. Click **Typography**.

5. In the **Headings** fieldsgroup fill in one of the three variants:

- Select **Shopify library font** from the **Font source** field and select font from the **Shopify library font** field.
- Select **Google font** from the **Font source** field and enter google font name in the **Google font name** field or select preset google font name which is used in the theme from the **or select preset google** field.
- Select **Custom font** from the **Font source** field and enter custom font name in the **Custom font** field.

6. Click **Save**.

Font weight calibration

Each font family often needs to be calibrated differently, because each font has its own understanding of the level of weight. That is why we allow you to change default font-weight options. You can separately calibrate the font weight both globally and separately for banners.

The screenshot shows the 'Theme settings' page in the Shopify admin. Under the 'General font weight calibration' section, there are dropdown menus for each font weight category: Light (300), Normal (400), Medium (500), Semi Bold (600), Bold (700), and Extra Bold (800). Each dropdown menu lists the current value as 'default' followed by a dropdown arrow. To the right of these dropdowns, a list of available font weights is shown with checkmarks:

- Light 300 (default) ✓
- Normal 400 (default) ✓
- Medium 500 (default) ✓
- Semi Bold 600 (default) ✓
- Bold 700 (default) ✓
- Extra Bold 800 (default) ✓

Steps to calibrate font weight

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Click **Theme settings**.
4. Click **Typography**.
5. There are two filedsgroups **General font weight calibration** and **Banners font weight calibration**. Select own value in the **Light**, **Normal**, **Medium**, **Semi Bold**, **Bold**, **Extra Bold**, **Black (Heavy)** fields of each filedsgroup.
6. Click **Save**.

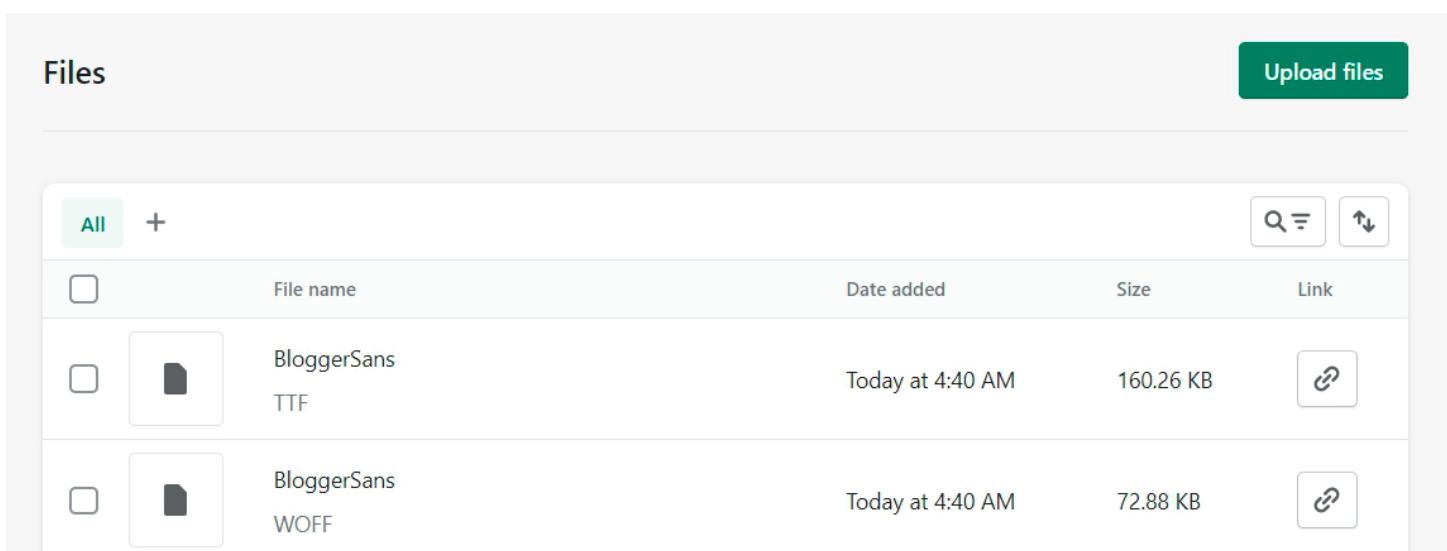

Thus, you can calibrate default font weight. The most useful feature if you don't use default fonts.

How to add custom fonts to Shopify

If you want to use a font that's not included in Shopify's font library nor in Google's font library, then you can use fonts from third party solutions. Follow these steps to include the custom font in your theme:

1. Upload the font files to the **Settings > Files** section of the Shopify admin.

We have added two files (*.woff and *.ttf) of the font [**BloggerSans**](#)

The screenshot shows the 'Files' section in the Shopify Admin. At the top, there is a 'Files' button and a green 'Upload files' button. Below is a table with columns: 'All' (button), '+', 'File name', 'Date added', 'Size', and 'Link'. There are two rows of files:

| All | + | File name | Date added | Size | Link |
|--------------------------|---|---------------------|------------------|-----------|---|
| <input type="checkbox"/> |  | BloggerSans TTF | Today at 4:40 AM | 160.26 KB |  |
| <input type="checkbox"/> |  | BloggerSans WOFF | Today at 4:40 AM | 72.88 KB |  |

2. From your Shopify admin, go to **Online Store > Themes**.
3. Find the Lumia theme that you want to edit, and then click **Edit code**.
4. Open the folder **Assets** in the directory on the left side and then open the file **font.css.liquid**.
Edit the example code, by replacing *myfont* with your custom file name.
In the case of this example, the code looks like this:

```
@font-face {  
    font-family: "BloggerSans";  
    src: url('{{ "BloggerSans.woff" | file_url }}') format("woff"), /* All modern Brow  
        url('{{ "BloggerSans.ttf" | file_url }}') format("truetype"); /* Safari, Andro  
    }  
}
```

Instead **BloggerSans** should be the name of your font.

All modern browsers [support](#) WOFF format.

If you don't need legacy browsers support, just use *.woff file.

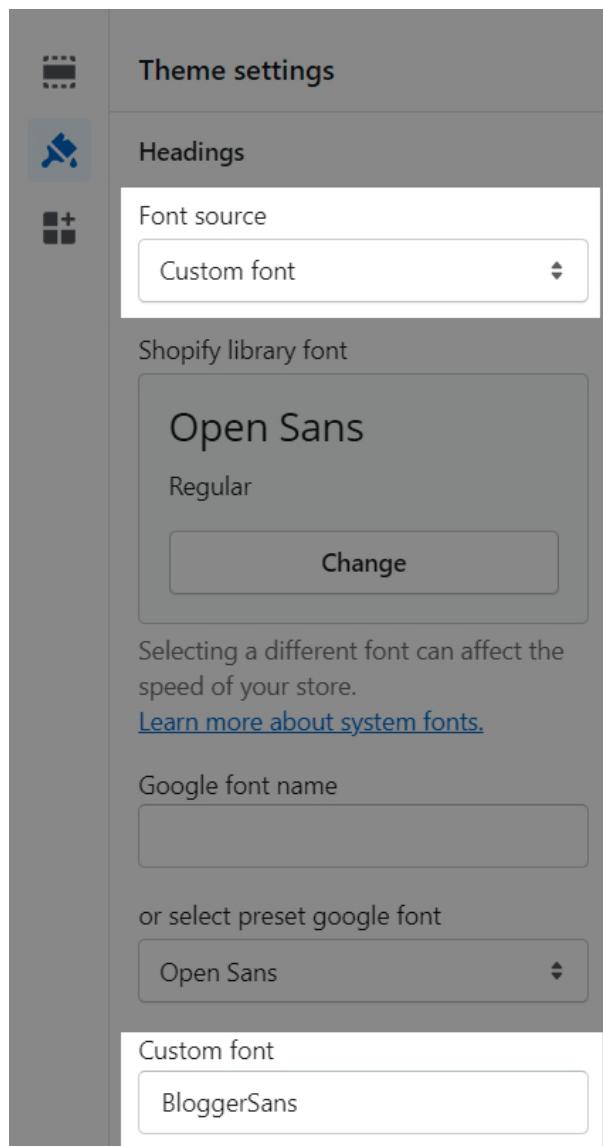

Click **Save** button.

5. Click **Theme settings**.

6. Open **Typography**.

7. If you want to change global text font, then in the **Body** fieldsgroup select **Custom font** from the **Font source** field and put custom font name in the **Custom font** field.

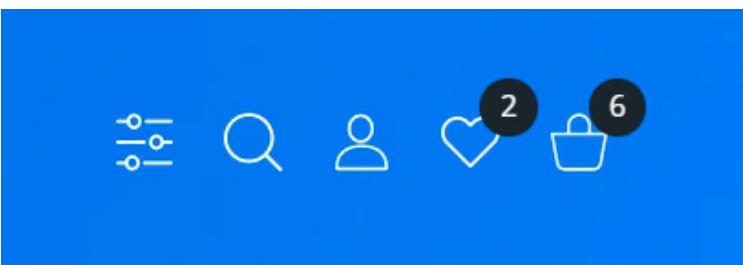

If you want to change **only** font for headings and banners, then in the **Headings** fieldsgroup select **Custom font** from the **Font source** field and put custom font name in the **Custom font** field.

Click **Save** button.

Icons

Lumia uses a lot of icons to represent visual information. There are a ready-made collection of icons that you can use when setup your store. You can also view all the icons on the [Typography Page ↗](#).

Icons in the header

Social icons

Home

Catalog

Account

Wishlist

Cart

Icons in the bottom panel

Each icon is a separate SVG file. All icons files are placed in the **Snippets** folder of your store. You can modify it, but we do not recommend doing so. It's better to add new ones.

An example how to add a new icon is described below.

Steps to add new icon

1. First of all you need an icon in **svg** format.

As an example we can recommend some resources where you can find free or paid icons:

- <https://www.iconfinder.com/>

- <https://www.flaticon.com/>
- <https://icons8.com/icons>

Try to choose icons that will not stand out from the rest.

Icons should be approximately the same size and the same line weight.

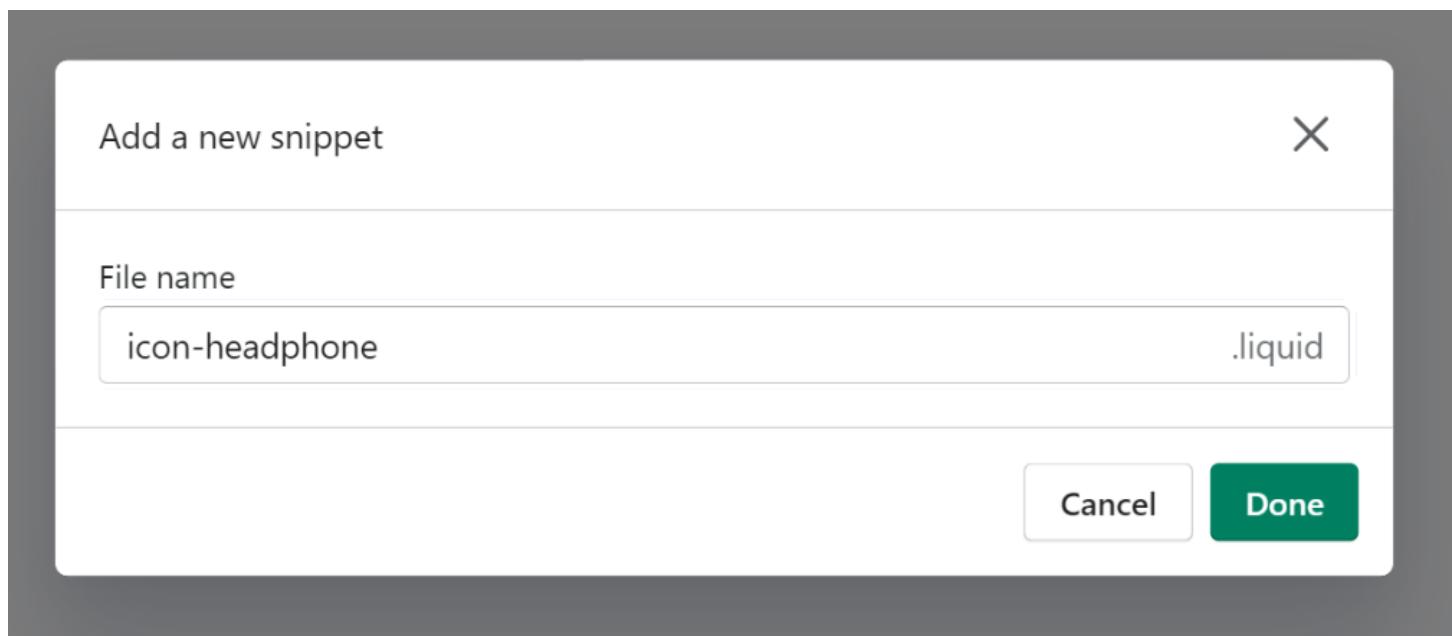

2. From your Shopify admin, go to **Online Store > Themes**.

3. Find the Lumia theme that you want to edit, and then click **Edit code**.

4. Open the folder **Snippets** in the directory on the left side and click **Add new asset**.

In the popup window put the name of your new icon in the **File name** field and click **Done** button.

For example, we had creating a headphones icon, so we called it *icon-headphone*.

5. Paste in the file of the code editor (on the right side) the code of your icon.

Then click **Save** button.

6. Open the folder **Snippets** in the directory on the left and then open the file **icon.liquid**. Scroll down and before lines:

```
else  
  render 'placeholder'
```

add two strokes:

```
when 'icon-headphone'  
render 'icon-headphone'
```

The screenshot shows the Shopify admin code editor interface. On the left, a sidebar lists various Liquid files. In the main area, the 'icon-liq' file is open, showing a code editor with a 'Recent changes' section at the top. The code itself is a series of conditional statements using the 'when' and 'render' tags. A specific line of code, 'when "icon-headphone"', is highlighted with a blue background. At the bottom right of the code editor are 'Format liquid' and 'Save' buttons.

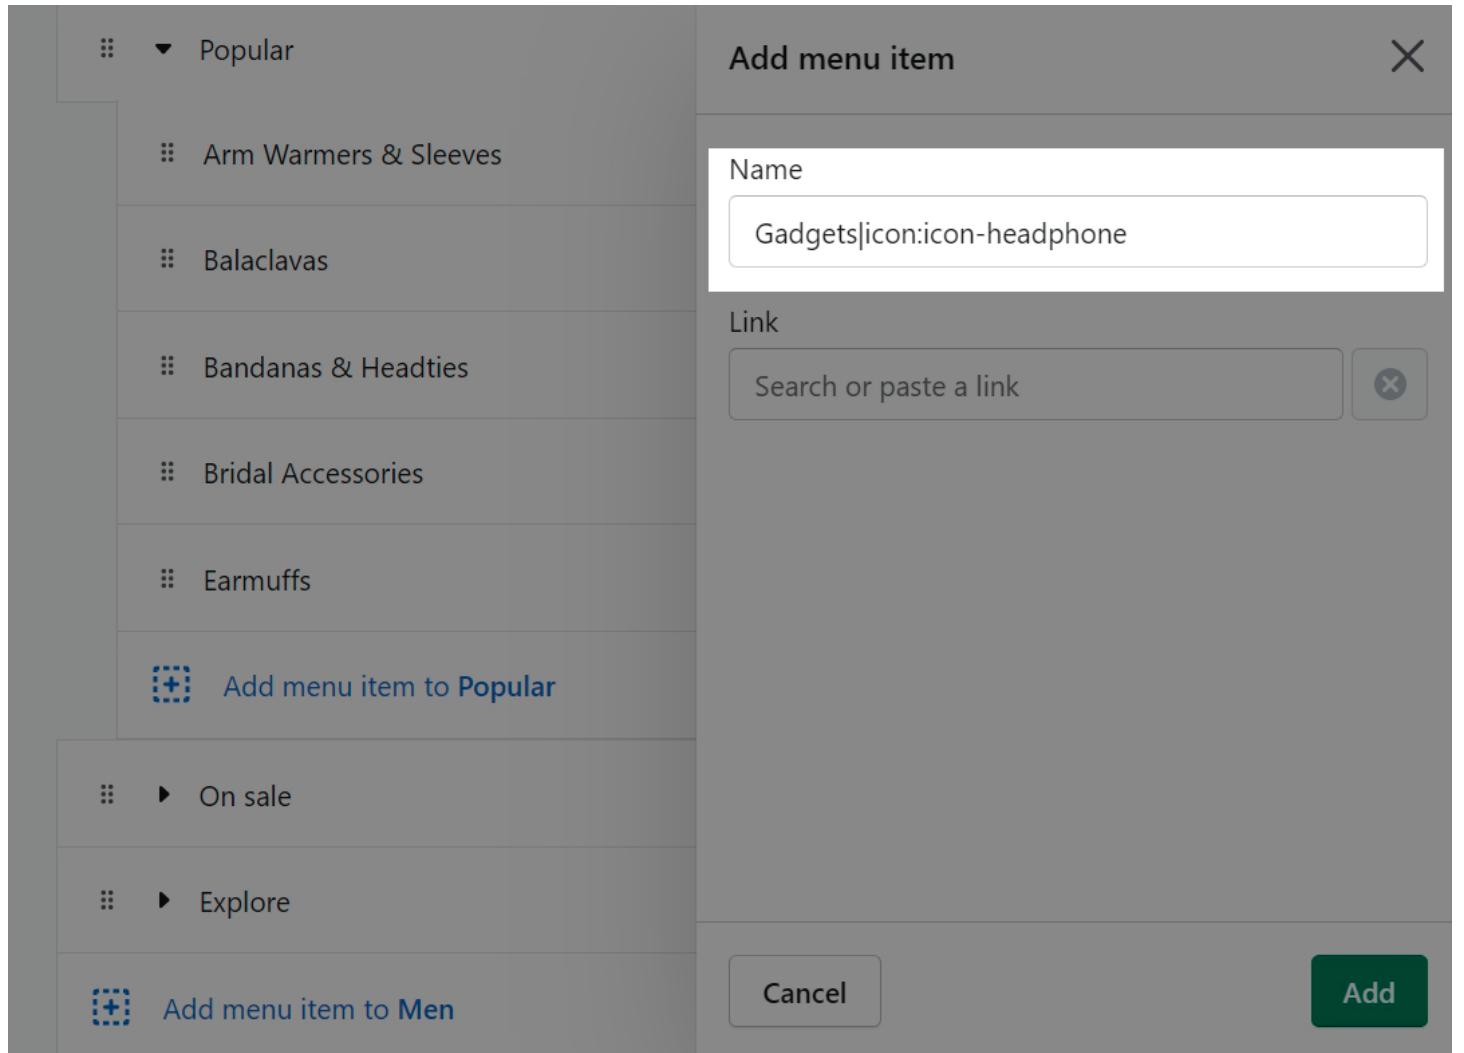

```

173 -%}
174
175
176
```

Click **Save** button.

7. The icon has been added. Now you can use it when setting up your store.

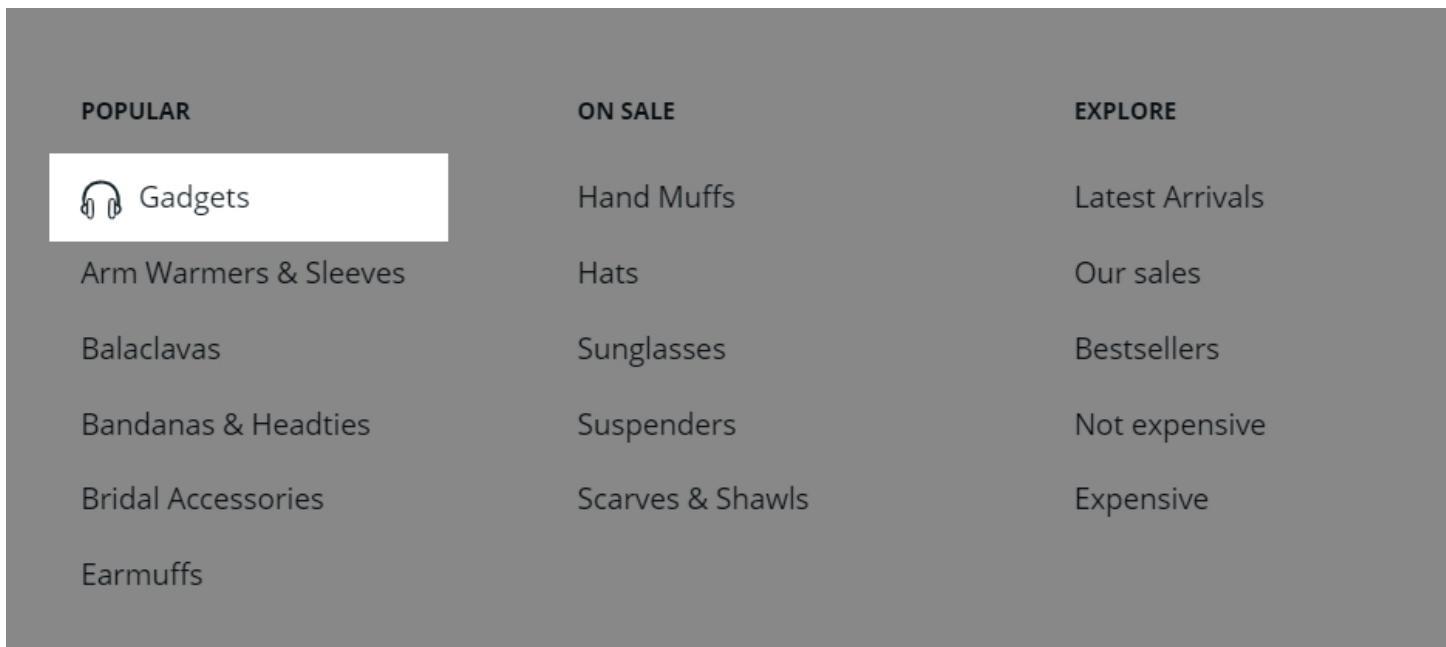

How to add an icon to Navigation

1. From your Shopify admin, go to **Online Store > Navigation**.
2. On the Navigation page, click the title of the menu that you want to edit.
3. Click **Add menu item** or click on the **Edit** button near the menu item if it was created before.
4. In the **Name** field after the item name paste code `/icon:icon-headphone`.

Click **Save** button.

5. The icon will appear near the menu link.

How to change other icons

Perhaps you have an idea to change others icons? Such as cart icon, wishlist icon, phone icon, etc.? This is a more difficult task and it will require certain skills from you.

After the icon is added, you can add it to the **Liquids** files in two ways.

Liquid is a template language created by Shopify.

```
{% render 'your-icon-name' %}
```

OR

```
{% render 'icon', icon: your-icon-name %}
```

As an example, take a look at the step-by-step instructions for changing an icon in the Header.

How to change cart icon in the Header

1. Add a new icon following steps 1-7 [here](#).

We have added supermarket trolley icon and called it **icon-trolley**

2. Open the folder **Snippets** in the directory on the left and then open the file **cart-icon-bubble.liquid**. Replace coden:

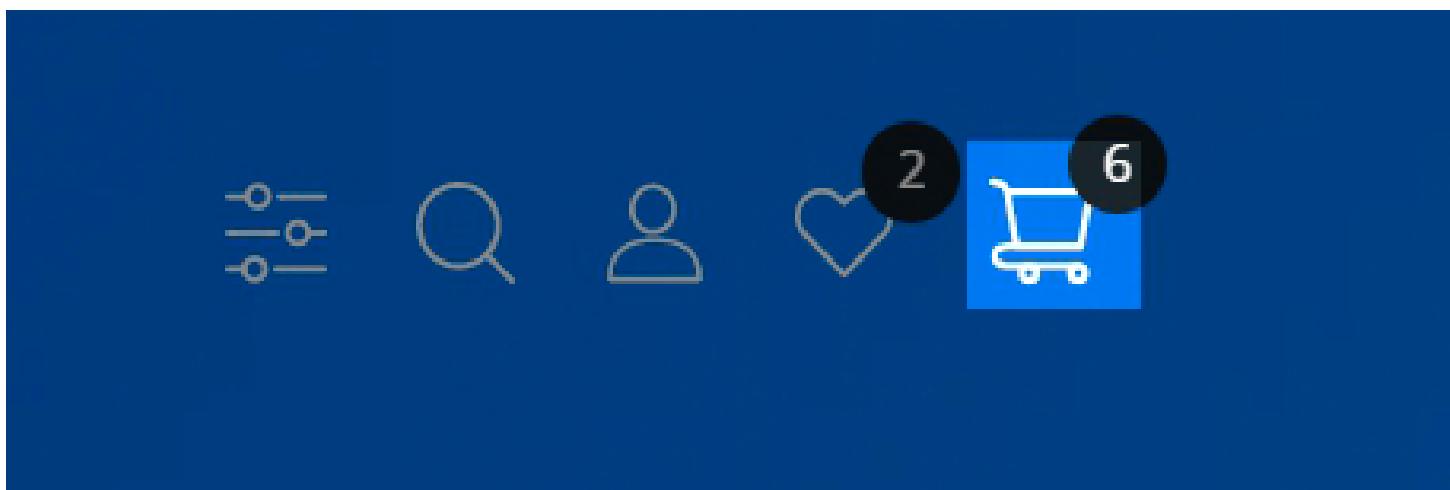

```
{% render 'icon-cart-2' %}
```

with this one:

```
{% render 'icon-trolley' %}
```

Instead **icon-trolley** should be the name of your icon. Click **Save** button.

3. The new icon will appear in the Header.

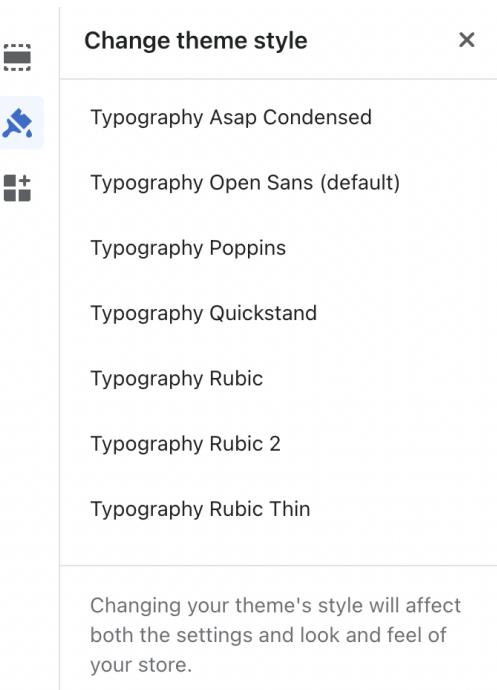

Typography presets

With the help of presets, you can change the typography of the store on the fly. This is very suitable for quick store builds.

Steps to apply typography presets

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Click **Theme settings**.
4. Click **Theme style**.
5. Click on the typography preset you need.

6. Click **Change style** to preview changes.

7. Click **Save** if you like new style.

Search

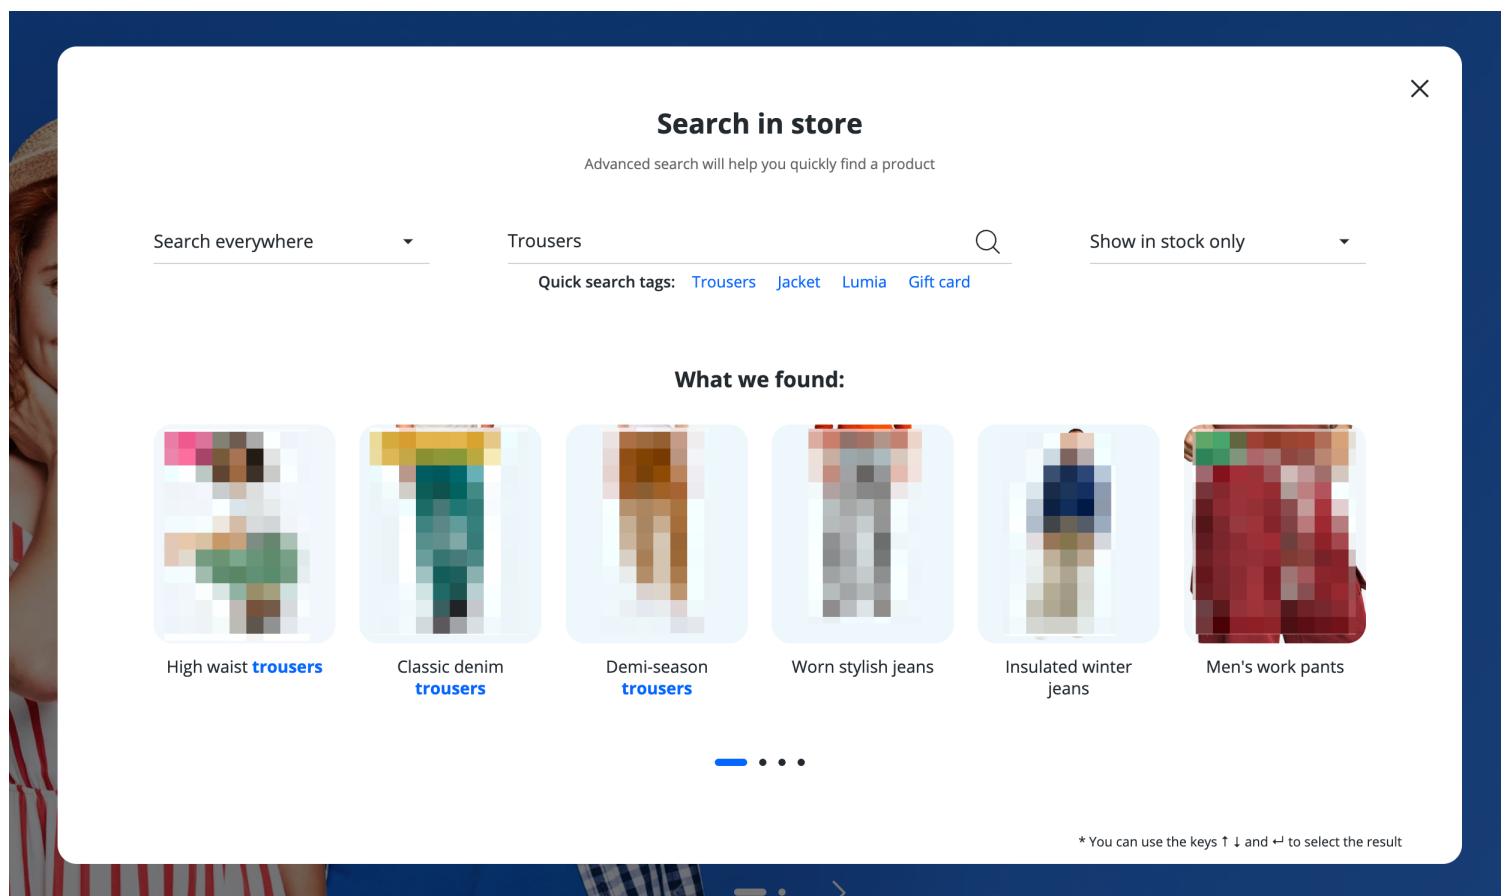

The online store search is a fully featured, powerful tool for your customers to search across all of your store's products, articles, and pages.

More common information about search on Shopify platform you can read in [official documentation ↗](#).

Quick search

We have implemented a full-featured quick search that can be done using the Shopify API.

On desktop

Enabled by default: Yes

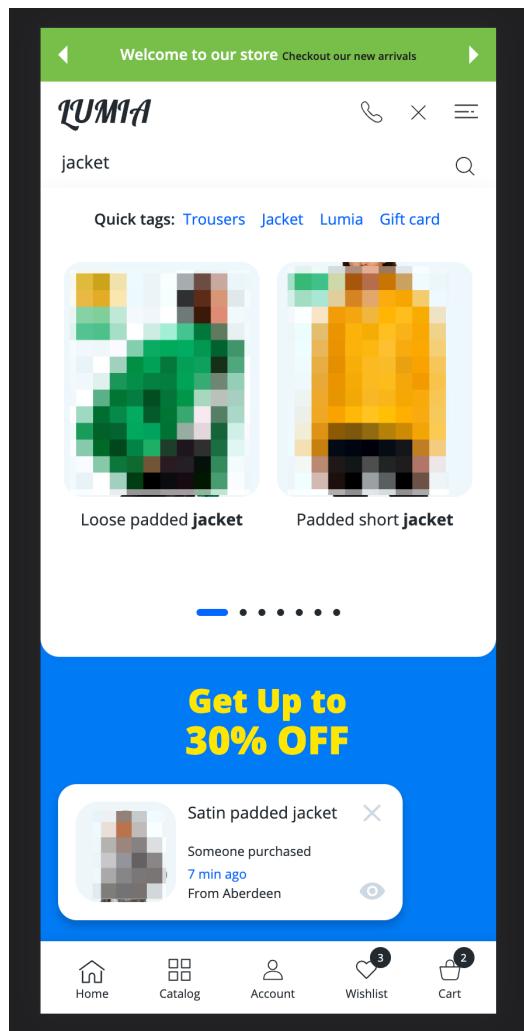

Asynchronous: Yes (100% passes page speed insight metrics)

Visibility: Everywhere

Key Features:

1. Quick search tags
2. Where to search option:
 - Search everywhere
 - Search articles and posts
 - Products only
3. Show all products or in stock only
4. The most searched items for today start preview
5. You can use the keys ↑ ↓ and ←→ to select the result
6. Search using title, sku, type, vendor, description or tags
7. Quick view result **Visibility:** Everywhere

On mobile

Enabled by default: Yes

Asynchronous: Yes (100% passes page speed insight metrics)

Visibility: Everywhere

Key Features:

1. Search by title, sku, type, vendor, description or tags
2. Quick view result

i The quick search automatically shows the result based on the typing of the search term, but if you click on the search icon or click ↵ in the search input, the result will be redirected to the **advanced search page** with the ability to filter products by product options.

Advanced search page

The search page supports sections and you can extend the page with sections from **Sections Everywhere** catalog. The main section of the search page is **Search results** section. The section consists of the left side of the Collection Filters and the right side of the Product Grid.

The screenshot shows the 'Search results' section of an advanced search page. At the top, there is a search bar with the text 'Jacket' and a magnifying glass icon. Below the search bar, it says 'Quick search tags: Trousers Jacket Lumia Gift card'. There are six circular icons representing brands: CANVERS (1 item), CLAYTAN (2 items), CLOKRS (1 item), COLE HORN (1 item), KOACH (2 items), and SAUCANY (1 item). On the left, there is a 'Filter by' sidebar with sections for 'COLOR' and 'SIZE'. Under 'COLOR', there are filters for Black (2), Blue (5), Brown (2), Cyan (1), Dark Blue (3), Dark Gray (4), Gray (5), and Green (5). Under 'SIZE', there is a range slider from \$0 to \$115. On the right, there is a grid of three product cards: 'KOACH High waist trousers' (\$67.00), 'SAUCANY Classic denim trousers' (\$93.00), and 'CLAYTAN Demi-season trousers' (\$32.00). Each card includes a small image of the product, its name, price, a star rating, and a list of categories.

Section admin interface

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Open the drop-down menu at the top of the page.
4. Select the **Others > Search** from the dropdown menu.
5. Click **Search results** section to view its settings.

Sidebar filter

The filter settings for the search page are fully inherited from the global collection main section settings. Therefore, all information about filters is in **Collection > Collection Page > Main Collection Section > Collection Filters**.

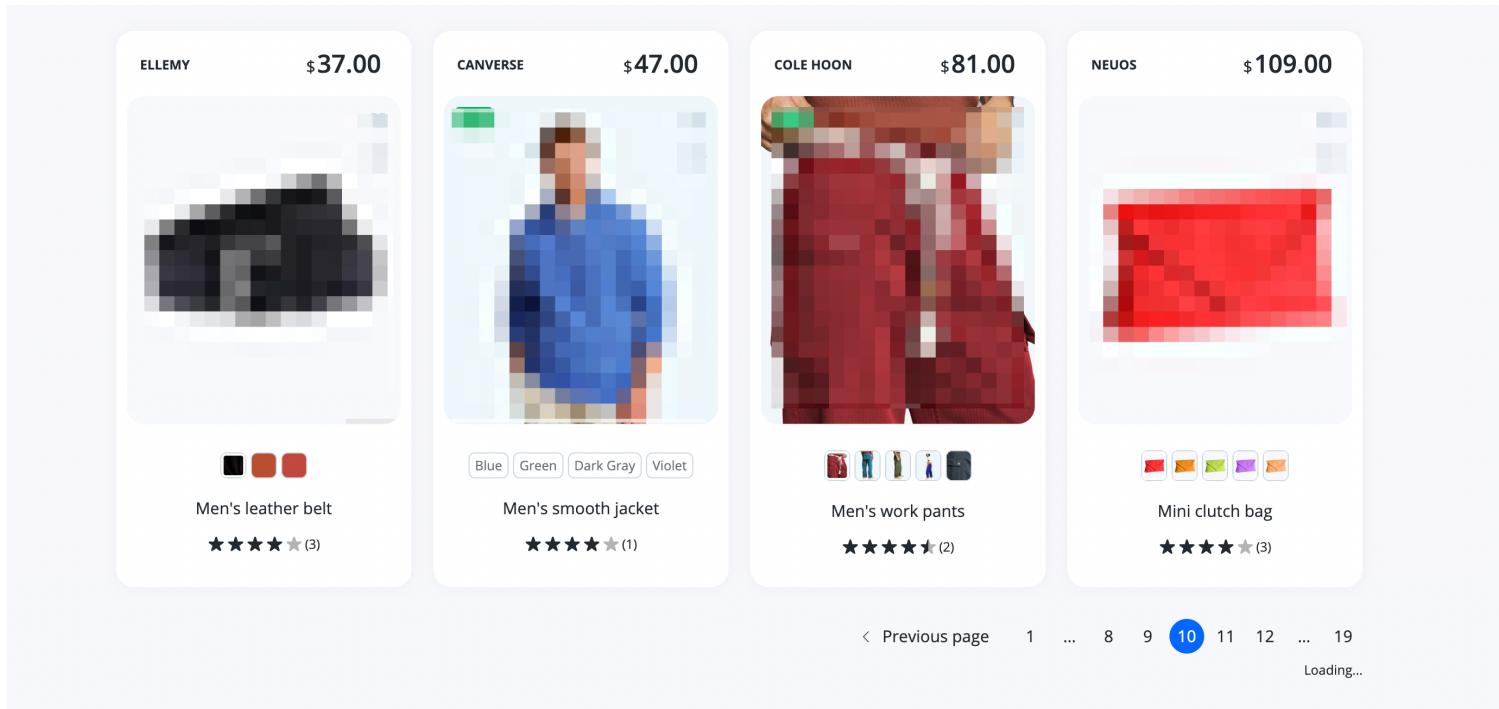

Products grid

Layout

The layout settings for the search page are fully inherited from the global collection main section settings. Therefore, all information about layout is in **Collection > Collection Page > Main Collection Section > Product Grid > Layout**.

Infinite products new

Loading products on a scroll event improves the user experience and speeds up the search for the desired product. Therefore, this feature is made in our theme and enabled by default.

Enabled by default: Yes

Steps to enable / disable

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Open the drop-down menu at the top of the page.
4. Select the **Others > Search** from the dropdown menu.
5. Click a **Search results** section to view its settings.
6. Check / Uncheck the **Infinite scroll** checkbox.
7. Click **Save**.

Wishlist

The wishlist module is missing in shopify by default. Often, customers are forced to buy a wishlist module in the shopify app store. But in our theme, the extra functional wishlist module is implemented and there is no need for extra cost.

The screenshot shows a Shopify storefront for 'LUMIA'. The header features a green bar with a discount code offer: 'Save 30-70% Sitewide!!! Click And Copy Code: save70'. Below the header is a navigation bar with links: Home (underlined), Settings (New), Pages, Catalog, Women, and Men. The main content area has a large blue banner with two blurred figures and a 'Get 30%' discount offer. At the bottom of the banner are icons for free shipping, free returns, and secured payments. To the right of the banner is a 'Wishlist' section titled 'Add items to your wishlist now so you don't forget to add to cart later'. This section lists four items:

- Men's smooth jacket** (NEW) - Blue / XS - \$47.00
- Rough leather wallet** (SALE) - Dark Blue -32% (only today) - \$42.00
- Black street sneakers** (SALE) - 6 / Black -13% (only today) - \$65.00
- Satin padded jacket** (NEW) - Gray / Wool / XS & Subscription only - \$29.00

Each item has a delete icon, a quantity selector (minus, 1, plus), and a blue shopping cart icon. At the bottom of the wishlist section is a blue button labeled 'ADD FULL WISHLIST TO CART' and a link 'Clear wishlist'.

Features

Subscription support new

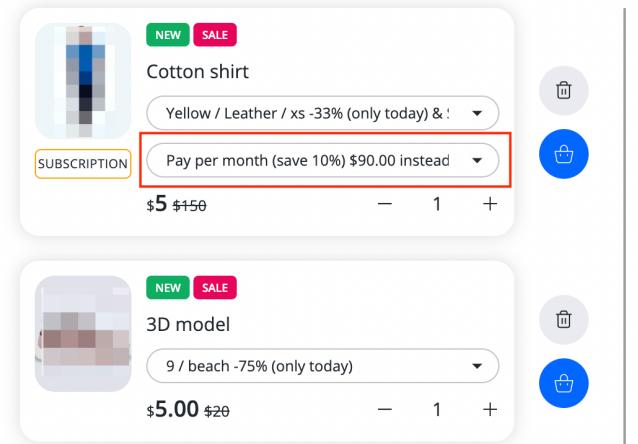

The wishlist is fully integrated into the subscription products system in Shopify. You say: "Well ok! But what does this have to do with the wishlist?"

The fact is that our module allows you to directly add products from the wishlist to the cart without additional transition to the product page. And if it is a subscription product, then we will display the available product subscription options.

Offer to add to wishlist when removing an item from the cart new

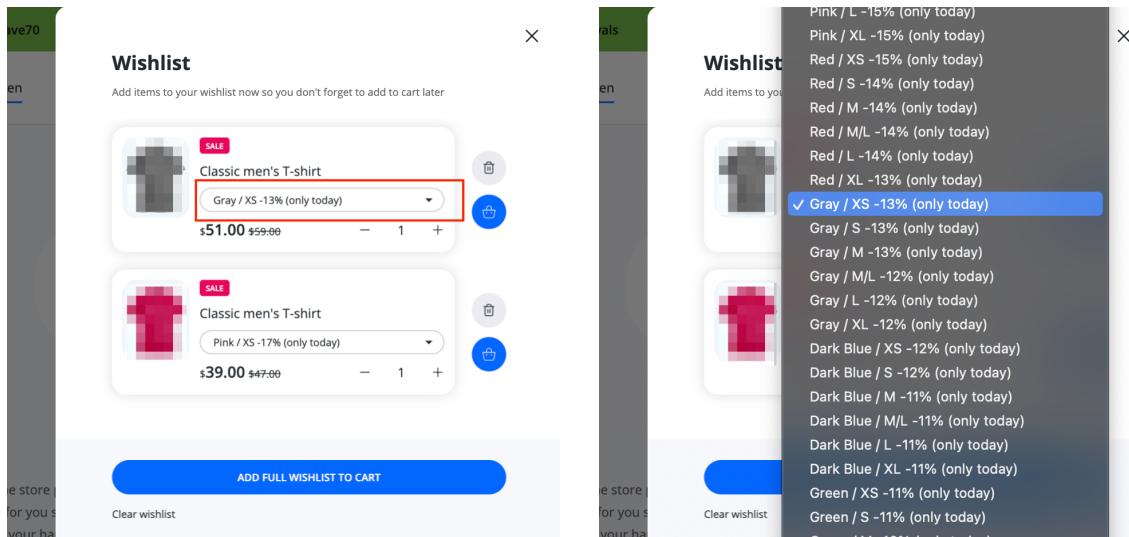

There is a situation when we have added goods to the cart, but at the checkout step we understand that we do not have enough funds to buy the entire cart and we delete the less important ones. And when it becomes possible to buy something that was deleted, we no longer remember exactly what we deleted by name. To avoid such a case, we made a dialog box when deleting a product from the cart with a question whether to add the deleted product to the wishlist.

If the product is already in the wishlist, then the product is immediately removed without an offer to add it again.

Edit wishlist

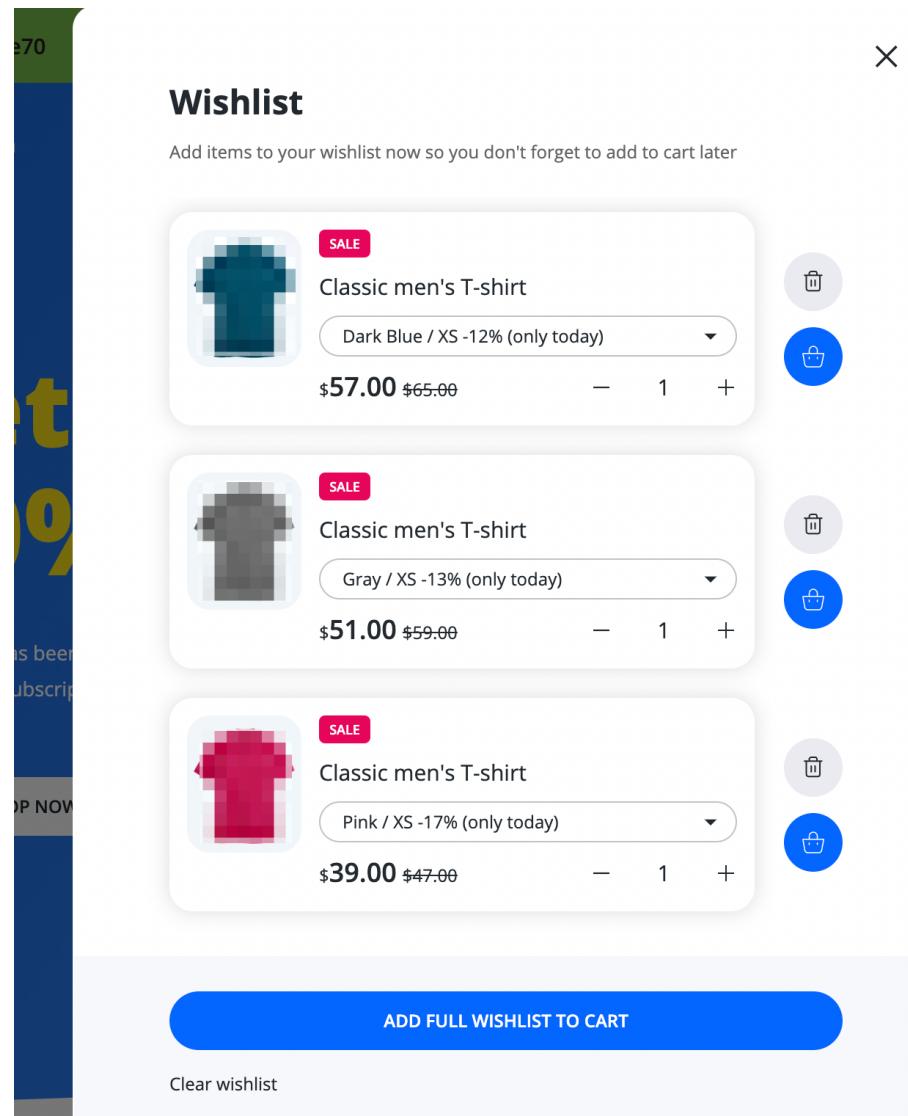

From the buyer's point of view, for example, you've added a shirt in the right color in the right size to the wishlist. But after a while you want to change the color. With our module, you do not need to re-enter the product page to reselect the color, add to wishlist new and remove from wishlist old one. This can be done right in our wishlist. Just change the option in the card and wishlist automatically saves the selected one.

Adding variants to wishlist

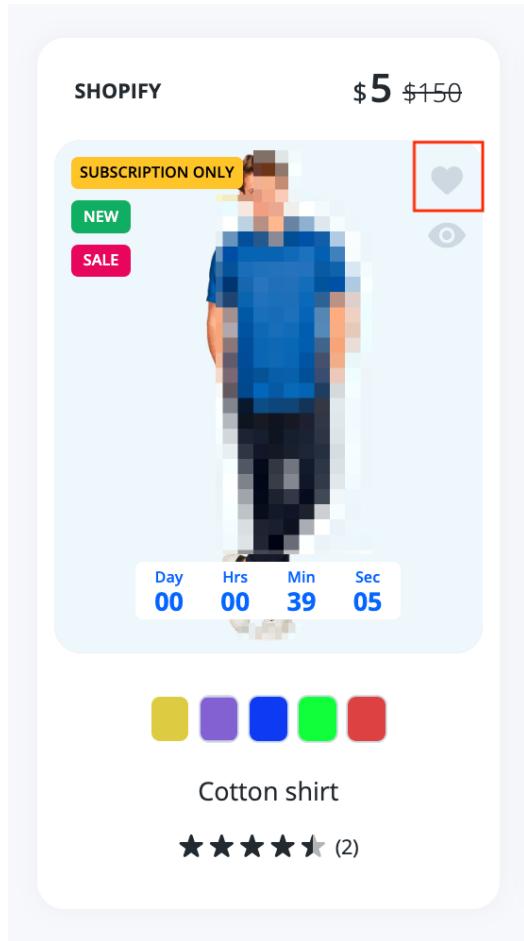

The principle of operation of our wishlist is that it does not add the product as a whole, but the selected option. That is, the same product in the same size but in different colors can be added to the wishlist. And if the product does not have an option, then the product can be added to the wishlist in a single copy.

For example, in the screenshot below, the same product but in different colors and in the same size is added to the wishlist.

Add to wishlist from everywhere

The wishlist is very closely and at the same time independently integrated into the theme. You can add the product you are interested in to the wishlist from almost any widget where there is a product card, from the **Frequently Bought Together** widget, from the product page, from the lookbook, from the cart.

Add to cart from wishlist

The wishlist is convenient as a draft for storing the goods you are interested in, which the buyer will later buy, if not all, but usually at least 1. Our wishlist allows you to do this on the fly directly from the list. Wishlist product cards are full-featured - they display all product options and therefore it is not necessary to go to the product page. Even subscription products can be added directly to the shopping cart by clicking on the add to cart button.

Wishlist

Add items to your wishlist now so you don't forget to add to cart later

A screenshot of a product card for a green cotton shirt. The card includes a small image of the shirt, two status badges ('NEW' and 'SALE'), the product name 'Cotton shirt', a dropdown menu showing 'Green / Leather / xs -75% (only today) & ...', another dropdown menu showing 'Pay per month (save 10%) \$4.50 instead of ...', the price '\$5.00 \$20', and quantity controls ('-' 1 '+'). To the right of the card is a trash bin icon and a blue shopping cart icon with a red border.

Add full wishlist to cart new

And of course, the quintessence of our module is the ability to immediately add all the products to the cart, which will save the buyer's time than adding each item to the cart separately.

Wishlist

Add items to your wishlist now so you don't forget to add to cart later

A screenshot of a wishlist page showing two items. Each item has a small image, a 'SALE' badge, the product name ('Classic men's T-shirt'), a dropdown menu showing size/color options, the price ('\$57.00 \$65.00' and '\$51.00 \$59.00'), and quantity controls ('-' 1 '+'). To the right of each item is a trash bin icon and a blue shopping cart icon with a red border. At the bottom of the page is a large blue button with the text 'ADD FULL WISHLIST TO CART' in white, also with a red border. Below the button is a link 'Clear wishlist'.

Steps to enable / disable

1. From your Shopify admin, go to **Online Store > Themes**.
2. Find the Lumia theme that you want to edit, and then click **Customize**.
3. Click **Theme settings**.
4. Click **General**.
5. Check / Uncheck the **Wishlist** checkbox.
6. Click **Save**.
